The Builder

THE J. PAUL GETTY MUSEUM LIBRARY

The Builder.

AN

ILLUSTRATED WEEKLY MAGAZINE,

FOR THE

Architect, Engineer, Archæologist, Constructor, & Artist,

CONDUCTED BY

GEORGE GODWIN, F.R.S.

Fellow of the Royal Institute of Architects, and Honorary Member of several Societies.

"Every man's proper mansion-house, and home, being the theater of his hospitality, the seate of selfe-fruition, the comfortablest part of his own life, the noblest of his sonne's inheritance, a kinde of private princedome, nay, to the possessors thereof, an epitome of the whole world, may well deserve, by these attributes, according to the degree of the master, to be decently and delightfully adorned."

"Architecture can want no commendation, where there are noble men, or noble mindes."——SIR HENRY WOTTON.

"Our English word To BUILD is the Anglo-Saxon Býlðan, to confirm, to establish, to make firm and sure and fast, to consolidate, to strengthen; and is applicable to all other things as well as to dwelling-places."——DIVERSIONS OF PURLEY.

"Art shows us man as he can by no other means be made known. Art gives us 'nobler loves and nobler cares,'—furnishing objects by the contemplation of which we are taught and exalted,—and so are ultimately led to seek beauty in its highest form, which is GOODNESS."

VOLUME FOR 1855.

LONDON:

PUBLISHING OFFICE, YORK STREET, COVENT GARDEN.

GETTY CENTER LIBRARY

INDEX TO VOLUME XIII.

THE METROPOLITAN BUILDING ACT, 1855.

An Act to amend the Laws relating to the Construction of Buildings in the Metropolis and its Neighbourhood.

[18*th* & 19*th Victoria, Cap.* 122. 14*th August*, 1855.]

WHEREAS it is expedient that the laws relating to buildings in the Metropolis and its neighbourhood should be amended: Be it therefore enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows; (that is to say,)

PRELIMINARY.

Short Title.

1. This Act may be cited for all purposes as "The Metropolitan Building Act, 1855."

Commencement of Act.

2. This Act shall, except in cases where it is otherwise expressly provided, come into operation on the first day of *January*, one thousand eight hundred and fifty-six.

Interpretation of certain Terms in this Act.

3. In the construction of this Act (if not inconsistent with the context) the following terms shall have the respective meanings hereinafter assigned to them; (that is to say,)

"The Treasury" shall mean the Commissioners of her Majesty's Treasury:

"Public building" shall mean every building used as a church, chapel, or other place of public worship; also every building used for purposes of public instruction; also every building used as a college, public hall, hospital, theatre, public concert room, public ball room, public lecture room, public exhibition room, or for any other public purposes:

"External wall" shall apply to every outer wall or vertical enclosure of any building not being a party wall:

"Party wall" shall apply to every wall used or built in order to be used as a separation of any building from any other building, with a view to the same being occupied by different persons:

"Cross wall" shall apply to every wall used or built in order to be used as a separation of one part of any building from another part of the same building, such building being wholly in one occupation:

"Party structure" shall include party walls, and also partitions, arches, floors, and other structures separating buildings, stories, or rooms which belong to different owners, or which are approached by distinct staircases or separate entrances from without:

The "area" of every building shall be deemed to be the superficies of a horizontal section of such building made at the point of its greatest surface, including the external walls and such portion of the party walls as belong to the building, but excluding any attached building the height of which does not exceed the height of the ground story:

"The base of the wall" shall mean the course immediately above the footings:

"Owner" shall apply to every person in possession or receipt either of the whole or of any part of the rents or profits of any land or tenement, or in the occupation of such land or tenement other than as a tenant from year to year or for any less term, or as a tenant at will:

"Builder" shall apply to and include the master-builder or other person employed to execute or who actually executes any work upon any building:

"District surveyor" shall mean every such surveyor who is appointed in pursuance of this Act, or whose appointment is hereby confirmed, and shall include any deputy or assistant surveyor appointed under this Act:

In all cases in which the name of an officer having local jurisdiction in respect of his office is referred to without mention of the locality to which the jurisdiction extends, such reference is to be understood to indicate the officer having jurisdiction in that place within which is situate the building or other subject-matter or any part thereof to which such reference applies:

"Person" shall include "a body corporate."

LIMITS OF ACT.

Act to extend to all Places within Limits defined by 18 & 19 *Vict. c.* 120.

4. This Act shall extend to all places within the limits of the Metropolis, as defined by an Act passed in the present session of Parliament, intituled *An Act for the better local Management of the Metropolis*, and to all other places to which such last-mentioned Act may be extended, unless such places are, in making such extension, expressly excepted from the operation of this Act; but nothing herein contained shall affect the exercise of any powers vested by any Act of Parliament in the Commissioners of Sewers of the city of *London* for the time being.

Division of Act.

5. This Act shall be divided into five parts:—

(1.) The first part relating to the regulation and supervision of buildings:

(2.) The second part relating to dangerous structures:

(3.) The third part relating to party structures:

(4.) The fourth part relating to miscellaneous provisions:

(5.) The fifth part relating to the repeal of former Acts, and to temporary provisions.

PART I.

REGULATION AND SUPERVISION OF BUILDINGS.

Buildings, &c. herein named exempt from Operation of Part I. of this Act.

6. The following buildings and works shall be exempt from the operation of the first part of this Act:—

Bridges, piers, jetties, embankment walls, retaining walls, and wharf or quay walls:

Her Majesty's royal palaces, and any building in the possession of her Majesty, her heirs and successors, or employed for her Majesty's use or service:

Common gaols, prisons, houses of correction, and places of confinement under the inspection of the Inspectors of Prisons, and Bethlehem Hospital, and the House of Occupations adjoining:

The Mansion House, Guildhall, and Royal Exchange of the city of *London*:

The offices and buildings of the Governor and Company of the Bank of *England* already erected, and which now form the edifice called "The Bank of *England*," and any offices and buildings hereafter to be erected for the use of the said Governor and Company, either on the site of, or in addition to, and in connexion with the said edifice:

The buildings of the *British* Museum:

The offices and buildings of the Honourable *East-India* Company already erected, and any offices or buildings hereafter to be erected, for the use of the said Company, on the site of, or in addition to, such existing offices and buildings:

Greenwich Hospital, and the buildings in the parish of *Greenwich* vested in the Commissioners of *Greenwich* Hospital for the purposes of the said hospital:

All county lunatic asylums, sessions houses, and other public buildings belonging to or occupied by the justices of the peace of the county or city in which the same are situated:

The erections and buildings authorized by an Act passed in the ninth year of the reign of his late Majesty King *George* the Fourth, for the purposes of a market in *Covent Garden*:

The Cattle Market, with its appurtenances, erected in pursuance of the Metropolitan Cattle Market Act, 1851:

The buildings belonging to any canal, dock, or railway company, and used for the purposes of such canal, dock, or railway, under the provisions of any Act of Parliament:

All buildings, not exceeding in height thirty feet, as measured from the footings of the walls, and not exceeding in extent one hundred and twenty-five thousand cubic feet, and not being public buildings, wholly in one occupation, and distant at least eight feet from the nearest street or alley, whether public or private, and at the least thirty feet from the nearest buildings and from the ground of any adjoining owner:

All buildings not exceeding in extent two hundred and sixteen thousand cubic feet, and not being public buildings, and distant at least thirty feet from the nearest street or alley, whether public or private, and at the least sixty feet from the nearest buildings and from the ground of an adjoining owner:

All party fence-walls and greenhouses, so far as regards the necessary woodwork of the sashes, doors, and frames:

Openings made into walls or flues for the purpose of inserting therein ventilating valves, of a superficial extent not greater than forty square inches, if such valves are not nearer than twelve inches to any timber or other combustible material.

Application of Act, except Exemptions before mentioned.

7. With the exemptions hereinbefore mentioned, this Act shall apply to all new buildings; and whenever mention is herein made of any building, it shall, unless the contrary appears from the context, be deemed to imply a new building.

Building, when deemed to be new.

8. A building shall be deemed to be new whenever the enclosing walls thereof have not been carried higher than the footings previously to the said first day of *January*, one thousand eight hundred and fifty-six: any other building shall be deemed to be an old building.

Alterations of and Additions to old Buildings.

9. Any alteration, addition, or other work made or done for any purpose, except that of necessary repair not affecting the construction of any external or party wall, in, to, or upon any old building, or in, to, or upon any new building after the roof has been covered in, shall, to the extent of such alteration, addition, or work, be subject to the regulations of this Act; and whenever mention is hereinafter made of any alteration, addition, or work in, to, or upon any building, it shall, unless the contrary appears from the context, be deemed to imply an alteration, addition, or work to which this Act applies.

Rebuilding old Buildings.

10. Whenever any old building has been taken down to an extent exceeding one half of such building, such half to be measured in cubic feet, the rebuilding thereof shall be deemed to be the erection of a new building; and every portion of such old building that is not in conformity with the regulations of this Act shall be forthwith taken down.

Division of old Buildings separated by irregular Partitions.

11. Whenever any old buildings are separated by timber or other partitions not in conformity with this Act, then, if such partitions are removed to the extent of one half thereof, such buildings shall as respects the separation thereof be deemed to be new buildings, and be forthwith divided from each other in the manner directed by this Act.

WALLS.

Structure and Thickness of Walls.

12. Walls shall be constructed of such substances, and of such thickness, and in such manner as are mentioned in the first schedule annexed hereto.

RECESSES AND OPENINGS.

Rules as to Recesses and Openings.

13. The following rules shall be observed with respect to recesses and openings in walls:

Recesses and openings may be made in external walls, provided,

First, that the backs of such recesses are not of less thickness than eight and a half inches; and,

Second, that the area of such recesses and openings do not, taken together, exceed one half of the whole area of the wall in which they are made:

Recesses may be made in party walls, provided that,

First, the backs of such recesses are not of less thickness than thirteen inches; and

Second, that every recess so formed is arched over, and that the area of such recesses do not, taken altogether, exceed one half of the whole area of the wall of the story in which they are made; and

Third, that such recesses do not come within one foot of the inner face of the external walls.

But no opening shall be made in any party wall except in accordance with the rules of this Act:

The word area, as used in this section, shall mean the area of the vertical face, or elevation, of the wall, pier, or recess to which it refers.

MISCELLANEOUS.

As to Timber in External Walls.

14. Loophole frames may be fixed within one inch and a half of the face of any external wall; but all other woodwork fixed in any external wall, except bressummers and story posts under the same, and frames of doors and windows of shops on the ground story of any building, shall be set back four inches at the least from the external face of such wall.

Rules as to Bressummers.

15. The following rules shall be observed with respect to bressummers and timbers:—

First, every bressummer must have a bearing in the direction of its length of four inches at the least at each end, upon a sufficient pier of brick or stone, or upon a timber or iron story post fixed on a solid foundation, in addition to its bearing upon any party wall; and the ends of such bressummer shall not be placed nearer to the centre line of the party walls than four and a half inches:

Second, no bond timber or wood plate shall be built into any party wall, and the ends of any beam or joist bearing on such walls shall be at the least four and a half inches distant from the centre line of the party walls:

Third, every bressummer bearing upon any party wall must be borne by a templet or corbel of stone or iron tailed through at least half the thickness of such wall, and of the full breadth of the bressummer.

Height and Thickness of Parapets to External Walls.

16. If any gutter, any part of which is formed of combustible materials, adjoins an external wall, then such wall must be carried up so as to form a parapet one foot at the least above the highest part of such gutter, and the thickness of the parapet so carried up must be at the least eight and a half inches, reckoned from the level of the under side of the gutter plate.

Height of Party Walls above Roof.

17. Every party wall shall be carried up above the roof flat or gutter of the highest building adjoining thereto, to such height as will give a distance of fifteen inches measured at right angles to the slope

of the roof, or fifteen inches above the highest part of any flat or gutter, as the case may be; and every party wall shall be carried up above any turret, dormer, lantern light, or other erection of combustible materials fixed upon the roof or flat of any building within four feet from such party wall, and shall extend at the least twelve inches higher and wider on each side than such erection; and every party wall shall be carried up above any part of any roof opposite thereto, and within four feet from such party wall.

As to Chases in Party Walls.

18. In a party wall no chase shall be made wider than fourteen inches, nor more than four and a half inches deep from the face of the wall, nor so as to leave less than eight and a half inches in thickness at the back or opposite side thereof, and no chase may be made within a distance of seven feet from any other chase on the same side of the wall.

As to Construction of Roofs.

19. The roofs of buildings shall be constructed as follows; that is to say,

First, the flat, gutter, and roof of every building, and every turret, dormer, lantern light, skylight, or other erection placed on the flat or roof thereof, shall be externally covered with slates, tiles, metal, or other incombustible materials, except the doors, door frames, windows, and window frames of such dormers, turrets, lantern lights, skylights, or other erections.

Second, the plane of the surface of the roof of a warehouse or other building, used either wholly or in part for purposes of trade or manufacture, shall not incline from the external or party walls upwards at a greater angle than forty-seven degrees with the horizon.

Rules as to Chimnies and Flues.

20. The following rules shall be observed as to chimnies and flues:—

First, chimnies built on corbels of brick, stone, or other incombustible materials, may be introduced above the level of the ceiling of the ground story if the work so corbelled out does not project from the wall more than the thickness of the wall, but all other chimnies shall be built on solid foundations, and with footings similar to the footings of the wall against which they are built.

Second, chimnies and flues having proper doors of not less than six inches square may be constructed at any angle, but in every other chimney or flue the angles shall be constructed of an obtuseness of not less than one hundred and thirty degrees, and shall be properly rounded.

Third, an arch of brick or stone or a bar of wrought iron must be built over the opening of every chimney to support the breast thereof, and if the breast projects more than four and a half inches from the face of the wall, and the jamb on either side is of less width than seventeen and a half inches, the abutments must be tied in by an iron bar or bars turned up and down at the ends and built into the jambs for at least eight and a half inches on each side:

Fourth, the inside of every flue, and the back or outside, unless forming part of the outer face of an external wall, must be rendered, pargeted, or lined with fireproof piping:

Fifth, the jambs of every chimney must at the least be eight and a half inches wide on each side of the opening thereof:

Sixth, the breast of every chimney, and the front, withe, partition, and back of every flue, must at the least be four inches in thickness:

Seventh, the back of every chimney opening, from the hearth up to the height of twelve inches above the mantel, must at the least be eight and a half inches thick if in a party wall, or four and a half inches thick if not in a party wall:

Eighth, the thickness of the upper side of every flue, when its course makes, with the horizon, an angle of less than forty-five degrees, must be at the least eight and a half inches:

Ninth, every chimney shaft shall be carried up in brick or stone work all round, at the least four inches thick, to a height of not less than three feet above the roof, flat, or gutter adjoining thereto, measured at the highest point in the line of junction with such roof, flat, or gutter:

Tenth, the brickwork or stonework of any chimney shaft, excepting that of the furnace of any steam-engine, brewery, distillery or manufactory, shall not be built higher above the roof, flat, or gutter adjoining thereto, measured from the highest point in the line of junction with such roof, flat, or gutter, than a height equal to six times the least width of such chimney shaft at the level of such highest point in the line of junction, unless such chimney shaft is built with and bonded to another chimney shaft not in the same line with the first, or otherwise rendered secure:

Eleventh, there shall be laid, level with the floor of every story, before the opening of every chimney, a slab of stone, slate, or other incombustible substance, at the least twelve inches longer than the width of such opening, and at the least eighteen inches wide in front of the breast thereof:

Twelfth, on every floor, except the lowest floor, such slab shall be laid wholly upon stone or iron bearers, or upon brick trimmers; but on the lowest floor it may be bedded on the solid ground:

Thirteenth, the hearth or slab of every chimney shall be bedded wholly on brick, stone, or other incombustible substance, and shall be solid for a thickness of seven inches at the least beneath the upper surface of such hearth or slab:

Fourteenth, no flue shall be built against any party structure, unless a withe is properly secured thereto, at the least four inches in thickness:

Fifteenth, no chimney breast or shaft built with or in any party wall shall be cut away, unless the district surveyor certifies that it can be done without injuriously affecting the stability of any building:

Sixteenth, no chimney shaft, jamb, breast, or flue shall be cut into, except for the purpose of repair or doing some one or more of the following things:

Of letting in, or removing, or altering flues, pipes, or funnels for the conveyance of smoke, hot air, or steam, or of letting in, removing, or altering smoke jacks:

Of forming openings for soot doors, such openings to be fitted with a close iron door and frame:

Of making openings for the insertion of ventilating valves, subject to the following restriction, That no opening shall be made nearer than twelve inches to any timber or combustible substance:

Seventeenth, no timber or woodwork shall be placed,

In any wall or chimney breast nearer than twelve inches to the inside of any flue or chimney opening;

Under any chimney opening within eighteen inches from the upper surface of the hearth of such chimney opening;

Within two inches from the face of the brickwork or stonework about any chimney or flue, where the substance of such brickwork or stonework is less than eight and a half inches thick, unless the face of such brickwork or stonework is rendered;

And no wooden plugs shall be driven nearer than six inches to the inside of any flue or chimney opening, nor any iron holdfast or other iron fastening nearer than two inches thereto.

Rules as to close Fires and Pipes for conveying Vapour, &c.

21. The following rules shall be observed as to close fires, and pipes for conveying heated vapour or water; that is to say,

First, the floor under every oven or stove used for the purpose of trade or manufacture, and the floor around the same for a space of eighteen inches, shall be formed of materials of an incombustible and non-conducting nature:

Second, no pipe for conveying smoke, heated air, steam, or hot water shall be fixed against any building on the face next to any street, alley, mews, or public way:

Third, no pipe for conveying heated air or steam shall be fixed nearer than six inches to any combustible materials:

Fourth, no pipe for conveying hot water shall be placed nearer than three inches to any combustible materials:

Fifth, no pipe for conveying smoke or other products of combustion shall be fixed nearer than nine inches to any combustible material:

And if any person fails in complying with the rules of this section, he shall for each offence incur a penalty not exceeding twenty pounds, to be recovered before a justice of the peace.

Rules as to Accesses and Stairs in certain Buildings.

22. The following rules shall be observed with respect to accesses and stairs:

In every public building, and in every other building containing more than one hundred and twenty-five thousand cubic feet, and used as a dwelling house for separate families, the floors of the lobbies, corridors, passages, and landings, and also the flights of stairs, shall be of stone or other fire-proof material, and carried by supports of a fire-proof material.

Rules as to habitable Rooms.

23. The following rules shall be observed with respect to habitable rooms in any building; that is to say,

First, every habitable room hereafter constructed in any building, except rooms in the roof thereof, and cellars, and underground rooms, shall be in every part at the least seven feet in height from the floor to the ceiling:

Second, every habitable room hereafter constructed in the roof of every building shall be at the least seven feet in height from the floor to the ceiling, throughout not less than one half the area of such room:

Third, cellars and underground rooms shall be constructed in manner directed by the said Act for the better Local Management of the Metropolis:

And whosoever knowingly suffers any room that is not constructed in conformity with this section to be inhabited shall, in addition to any other liabilities he may be subject to under this Act, incur a penalty not exceeding twenty shillings for every day during which such room is inhabited; and any room in which any person passes the night shall be deemed to be inhabited within the meaning of this Act.

As to Party Arches over public Ways.

24. Every party arch, and every arch or floor over any public way, or any passage leading to premises in other occupation, shall be formed of brick, stone, or other incombustible materials: If an arch of brick or stone is used, it shall, in cases where its span does not exceed nine feet, be of the thickness of four and a half inches at the least, but when its span exceeds nine feet, be of the thickness of eight and a half inches at the least: If an arch or floor of iron or other incombustible material is used, it shall be constructed in such manner as may be approved by the district surveyor.

As to Arches under public Ways.

25. Every arch under any public way shall be formed of brick, stone, or other incombustible materials: If an arch of brick or stone is used, it shall, in cases where its span does not exceed ten feet, be of the thickness of eight and a half inches at the least; where its span does not exceed fifteen feet, it shall be of the thickness of thirteen inches at least; and where its span exceeds fifteen feet, it shall be of such thickness as may be approved by the district surveyor: If an arch or other construction of iron or other incombustible material is used, it shall be constructed in such manner as may be approved by the district surveyor.

Rules as to Projections.

26. The following rules shall be observed as to projections:

First, every coping, cornice, facia, window dressing, portico, balcony, verandah, balustrade, and architectural projection or decoration whatsoever, and also the eaves or cornices to any overhanging roof, except the cornices and dressings to the window fronts of shops, and except the eaves and cornices to detached and semi-detached dwelling houses distant at least fifteen feet from any other building, and from the ground of any adjoining owner, shall, unless the Metropolitan Board otherwise permit, be of brick, tile, stone, artificial stone, slate, cement, or other fire-proof material:

Second, in streets or alleys of a less width than thirty feet, any shop front may project beyond the external wall of the building to which it belongs for five inches and no more, and any cornice of any such shop front may project thirteen inches and no more; and in any street or alley of a width greater than thirty feet, any shop front may project ten inches and no more, and the cornice may project for eighteen inches from the external walls, but no more:

Third, no part of the woodwork of any shop front shall be fixed nearer than four and a half inches from the line of junction of any adjoining premises, unless a pier or corbel of stone, brick, or other fire-proof material, four and a half inches wide at the least, is built or fixed next to such adjoining premises as high as such woodwork is fixed, and projects an inch at the least in front of the face thereof:

Fourth, the roof, flat, or gutter of every building, and every balcony, verandah, shop front, or other projection, must be so arranged and constructed, and so supplied with gutters and pipes, as to prevent the water therefrom from dropping upon or running over any public way:

Fifth, except in so far as is permitted by this section in the case of shop fronts, and with the exception of water pipes and their appurtenances, copings, cornices, facias, window dressings, and other like architectural decorations, no projection from any building shall extend beyond the general line of fronts in any street, except with the permission of the Metropolitan Board of Works hereinafter mentioned.

Rules as to the Separation of Buildings, and Limitation of their Areas.

27. The following rules shall be observed as to the separation of buildings, and limitation of their areas:

First, every building shall be separated by external or party walls from any adjoining building:

Second, separate sets of chambers or rooms tenanted by different persons shall, if contained in a building exceeding three thousand six hundred square feet in area, be deemed to be separate buildings, and be divided accordingly, so far as they adjoin vertically by party walls, and so far as they adjoin horizontally by party arches or fire-proof floors:

Third, if any building in one occupation is divided into two or more tenements, each having a separate entrance and staircase, or a separate entrance from without, every such tenement shall be deemed to be a separate building for the purposes of this Act:

Fourth, every warehouse, or other building used either wholly or in part for the purposes of trade or manufacture, containing more than two hundred and sixteen thousand cubic feet, shall be divided by party walls in such manner that the contents of each division thereof shall not exceed the above-mentioned number of cubic feet.

Rules as to uniting Buildings.

28. The following rules shall be observed as to uniting buildings:

First, no buildings shall be united unless they are wholly in the same occupation:

Second, no buildings shall be united, if when so united they will, considered as one building only, be in contravention of any of the provisions of this Act:

Third, no opening shall be made in any party wall dividing buildings, which, if taken together, would contain more than two hundred and sixteen thousand cubic feet, except under the following conditions:

Such opening shall not exceed in width seven feet or in height eight feet:

Such opening shall have the floor, jambs, and head formed of brick, stone, or iron, and be closed by two wrought iron doors, each one fourth of an inch thick in the panel, at a distance from each

other of the full thickness of the wall, fitted to rebated frames, without woodwork of any kind:

Fourth, whenever any buildings which have been united cease to be in the same occupation, any openings made in the party walls dividing the same shall be stopped up with brick or stone work of the full thickness of the wall itself, and properly bonded therewith.

As to Open Spaces near Dwelling Houses.

29. Every building used or intended to be used as a dwelling house, unless all the rooms can be lighted and ventilated from a street or alley adjoining, shall have in the rear or on the side thereof an open space exclusively belonging thereto of the extent at least of one hundred square feet.

Construction of Public Buildings.

30. Notwithstanding anything herein contained, every public building, including the walls, roofs, floors, galleries, and staircases, shall be constructed in such manner as may be approved by the district surveyor, or, in the event of disagreement, may be determined by the Metropolitan Board; and save in so far as respects the rules of construction, every public building shall throughout this Act be deemed to be included in the term building, and be subject to all the provisions of this Act, in the same manner as if it were a building erected for a purpose other than a public purpose.

DISTRICT SURVEYORS.

Buildings to be supervised by District Surveyors.

31. With the exemptions hereinbefore mentioned, every building, and every work done to, in, or upon any building, shall be subject to the supervision of the district surveyor appointed to the district in which the building is situate.

Power to Metropolitan Board of Works established under 18 & 19 *Vict. c.* 120.

32. The following things may be done by the Metropolitan Board of Works, established by the said Act for the better Local Management of the Metropolis, by order, at their discretion; that is to say,

First, they may alter the limits of any district, or unite any two or more districts together, and in any such case place such altered district under the supervision of any existing or of any future district surveyor, with power from time to time to alter any district so made, and do all such matters and things as are necessary for carrying into effect the power hereby given:

Second, they may dismiss any existing district surveyor, with the consent of one of her Majesty's principal secretaries of state; they may suspend any such surveyor as last aforesaid; they may dismiss or suspend any future district surveyor; and in case of any suspension or during any vacancy they may appoint a temporary substitute:

Third, whenever any vacancy occurs in the office of any existing or future district surveyor, they may appoint another qualified person in his place:

Fourth, they may pay such amount of compensation as they think fit to any district surveyor who may be deprived of his office, in pursuance of the power hereby given of altering the limits of districts:

But, subject to the provisions herein contained, the several places which, at the time when this Act comes into operation, are constituted districts, under an Act passed in the eighth year of the reign of her present Majesty, chapter eighty-four, and intituled *An Act for regulating the Construction and Use of Buildings in the Metropolis and its Neighbourhood*, for the purposes of that Act, shall continue to be districts for the purposes of this Act, and the several persons who, at the time when this Act comes into operation, are district surveyors under the provisions of the said Act, shall continue to be district surveyors under this Act.

Examination by Institute of British Architects.

33. The Institute of *British* Architects may from time to time cause to be examined, by such persons and in such manner as they think fit, all candidates presenting themselves for the purpose of being examined as to their competency to perform the duties of district surveyor, and shall grant certificates of competency to the candidates found deserving of the same; and no person who has not already filled the office of district surveyor, or has not already obtained a certificate of competency, in pursuance of the said Act of the eighth year of the reign of her present Majesty, chapter eighty-four, shall be qualified to be appointed to that office, unless he has received a certificate of competency from the said Institute of *British* Architects, or has been examined in such other manner as the said Metropolitan Board may direct, and been found competent in such examination.

District Surveyor to have and maintain an Office.

34. Every district surveyor shall have and maintain an office at his own expense in such part of his district as may be approved by the Metropolitan Board of Works.

District Surveyor may appoint Deputy with consent.

35. If any district surveyor is prevented by illness, infirmity, or any other unavoidable circumstance from attending to the duties of his office, he may, with the consent of the Metropolitan Board of Works, appoint some other person as his deputy to perform all his duties for such time as he may be prevented from executing them.

Assistant Surveyor may be appointed on Emergency.

36. If at any time it appears to the Metropolitan Board of Works that, on account of the pressure of business in any district, or any other account, the surveyor of that district cannot discharge his duties promptly and efficiently, then such Board may direct any other district surveyor to assist the surveyor of such district in the performance of his duties, or appoint some other person to give such assistance, and such assistant surveyor shall be entitled to receive all fees payable in respect of the services performed by him.

District Surveyor not to act in case of Works under his professional Superintendence.

37. If any building is executed, or any work done to, in, or upon any building, by or under the superintendence of any district surveyor acting professionally or on his own private account, it shall not be lawful for such surveyor to survey any such building for the purpose of this Act, or to act as district surveyor in respect thereof or in any matter connected therewith, but it shall be his duty to give notice thereof to the said Metropolitan Board, who shall then appoint some other district surveyor to act in respect of such matter.

NOTICES TO DISTRICT SURVEYORS.

Notices to be given to District Surveyor by Builder.

38. Two days before the following acts or event, that is to say,

Two days before any building, or any work to, in, or upon any building is commenced, and also, if the progress of any such building or work is after the commencement thereof suspended for any period exceeding three months, two days before such building or work is resumed, and also if during the progress of any such building or work the builder employed thereon is changed, then two days before any new builder enters upon the continuance of such building or work, it shall be the duty of the builder engaged in building or rebuilding such building, or in executing such work, or in continuing such building or work, to give to the district surveyor notice in writing stating the situation, area, and height, and intended use of the building or buildings about to be commenced, or to, in, or upon which any work is to be done, and the number of such buildings if more than one, and also the particulars of any such proposed work, and stating also his own name and address, but any works to, in, or upon the same building that are in progress at the same time may be included in one notice.

District Surveyor to cause Rules of this Act to be observed.

39. Every district surveyor shall, upon the receipt of any such notice as aforesaid, and also upon any work affected by the rules of this Act, but in respect of which no notice has been given, being observed by or made known to him, and also from time to time during the progress of any works affected by the rules and directions of this Act, as often as may be necessary for securing the due observance of such rules, survey any building or work hereby placed under their supervision, and cause all the rules of this Act to be duly observed.

Notice to be Evidence of intended Works.

40. Every notice given in pursuance of this Act shall be deemed, in any question relative to any building or work, to be *primâ facie* evidence as against such builder of the nature of the building or work proposed to be built or done.

Penalty on Builders neglecting to give Notice.

41. If any builder neglects to give notice in any of the cases aforesaid, or executes any works of which he is hereby required to give notice before giving the same, or having given due notice of any works executes the same before the expiration of two days from the time of giving such notice, such builder shall for every such offence incur a penalty not exceeding twenty pounds, to be recovered before a justice of the peace.

District Surveyor may enter and inspect Buildings affected by this Act—Penalty for Refusal.

42. At all reasonable times during the progress of any building or work affected by this Act, it shall be lawful for the district surveyor to enter and inspect such building or work; and if any person refuses to admit such surveyor to inspect such building or work, or refuses or neglects to afford such surveyor all reasonable assistance in such inspection, in every such case the offender shall incur for each offence a penalty not exceeding twenty pounds, to be recovered before a justice of the peace.

District Surveyor may enter Buildings to ascertain as to exempted Buildings.

43. The district surveyor may at all reasonable times enter any premises, with the exception of buildings hereinbefore exempted by name, for the purpose of ascertaining whether any buildings erected in such premises are in such a situation or possess such characteristics as are hereinbefore required in order to exempt them from the operation of this Act, and he may do all such things as are necessary for the above purpose; and if any person refuses to admit such surveyor to enter such premises or to inspect any such building, or neglects to afford to him all reasonable assistance in such inspection, in every such case the offender shall incur for each offence a penalty not exceeding twenty pounds, to be recovered before a justice of the peace.

In case of Emergency, Works may be commenced without Notice.

44. If by reason of any emergency any act or work is required to be done immediately, or before notice can be given as aforesaid, then it shall be lawful to do the act or work so required to be done, upon condition that before the expiration of twenty-four hours after such act or work has been begun, notice thereof is given to the district surveyor.

PROCEEDINGS BY DISTRICT SURVEYORS IN CASE OF IRREGULARITY.

Notice by District Surveyor in case of Irregularity.

45. In the following cases, that is to say,—

If, in erecting any building or in doing any work to, in, or upon any building, anything is done contrary to any of the rules of this Act, or anything required by this Act is omitted to be done; or

In cases where due notice has not been given,—

If the district surveyor, on surveying or inspecting any building or work, finds that the same is so far advanced that he cannot ascertain whether anything has been done contrary to the rules of this Act, or whether anything required by the rules of this Act has been omitted to be done;

In every such case the district surveyor shall give to the builder engaged in erecting such building, or in doing such work, notice in writing requiring such builder, within forty-eight hours from the date of such notice, to cause anything done contrary to the rules of this Act to be amended, or to do anything required to be done by this Act, but which has been omitted to be done, or to cause so much of any building or work as prevents such district surveyor from ascertaining whether anything has been done or omitted to be done as aforesaid to be to a sufficient extent cut into, laid open, or pulled down.

On Non-compliance with Notice, Justice to summon Builder, and make Order to comply with Requisition.

46. If the builder to whom such notice is given makes default in complying with the requisition thereof within such period of forty-eight hours, the district surveyor may cause complaint of such non-compliance to be made before a justice of the peace, and such justice shall thereupon issue a summons requiring the builder so in default to appear before him; and if upon his appearance, or in his absence, upon due proof of the service of such summons, it appears to such justice that the requisitions made by such notice or any of them are authorized by this Act, he shall make an order on such builder commanding him to comply with the requisitions of such notice, or any of such requisitions that may in his opinion be authorized by this Act, within a time to be named in such order.

Penalty on Non-compliance with Order of Justice.

47. If such order is not complied with, the builder on whom it is made shall incur a penalty not exceeding twenty pounds a day, to be recovered before a justice of the peace, during every day of the continuance of such noncompliance, and in addition thereto the district surveyor may, if he thinks fit, proceed with a sufficient number of workmen to enter upon the premises, and do all such things as may be necessary for enforcing the requisitions of such notice, and for bringing any building or work into conformity with the rules of this Act, and all expenses incurred by him in so doing and in any such proceedings as aforesaid, may be recovered from the builder on whom such order was made, in a summary manner, before a justice of the peace, or may be recovered from the owner of the premises in the same manner in which expenses incurred by the Commissioners hereinafter named in respect of dangerous buildings are hereinafter directed to be recovered from any owner; and if the owner cannot be found, or if, on demand, he refuses or neglects to pay the aforesaid expenses, the district surveyor shall have the same power of taking and selling the building in respect of which the order is made, and of applying the proceeds as is thereby given to the Commissioners.

Penalty on Workmen, &c. doing anything contrary to Rules of Act.

48. If any workman, labourer, servant, or other person employed in or about any building, wilfully, and without the privity or consent of the person causing such work to be done, does any thing in or about such building contrary to the rules of this Act, he shall for each such offence incur a penalty not exceeding fifty shillings.

FEES OF DISTRICT SURVEYORS.

Payments to District Surveyors in respect of Matters in First Part of Second Schedule.

49. There shall be paid to the district surveyors, in respect of the several matters specified in the first part of the second schedule hereto, the fees therein specified, or such other fees, not exceeding the amounts therein specified, as may from time to time be directed by the Metropolitan Board of Works; but one fee only shall be chargeable with respect to any such works done in, to, or upon any building as are in pursuance of the provisions hereinbefore contained included in one notice; and if in consequence of any reduction being made by the said Metropolitan Board in the amount of the said scheduled fees the income of any existing district surveyor is diminished, the Metropolitan Board shall grant to him compensation in respect of such diminution.

Metropolitan Board may appoint special Fees for Services not provided for.

50. If any special service is required to be performed by the district surveyor under the first part of this Act, for which no fee is specified in the said schedule, the Metropolitan Board of Works may order such fee to be paid for such service as they think fit, and the district surveyor shall have the same remedy for recovering such special fee as if the same were expressly named in the said schedule.

Periods when Surveyors entitled to Fees.

51. At the expiration of the following periods, that is to say,

Of one month after the roof of any building surveyed by any district surveyor under this Act has been covered in,

Of fourteen days after the completion of any such work as is by this Act placed under the supervision of the district surveyor,

Of fourteen days after any special service in respect of any building has been performed,

The district surveyor shall be entitled to receive the amount of fees due to him from the builder employed in erecting such building, or in doing such work, or in doing any matter in respect of which any special service has been performed by the surveyor, or from the owner or occupier of the building so erected or in respect of which such work has been done or service performed; and if any such builder, owner, or occupier refuses to pay the same, such fees may be recovered in a summary manner before a justice of the peace, upon its being shown to the satisfaction of such justice that a proper bill specifying the amount of such fees was delivered to such builder, owner, or occupier, or sent to him in a registered letter addressed to his last known residence.

RETURNS BY DISTRICT SURVEYORS.

District Surveyor to make monthly Returns to Metropolitan Board of Works.

52. Every district surveyor shall, within seven days after the first day of every month, make a return to the Metropolitan Board of Works, in such manner as they may appoint, of all notices and complaints received by him relative to the business of his district, and the results thereof, and of all matters brought by him before any justice of the peace, and of all the several works supervised and special services performed by him in the exercise of his office within the previous month, and of all fees charged or received in respect thereof, and specify in such return the description and locality of every building built, rebuilt, enlarged, or altered, or on which any work has been done under his supervision, with the particular nature of every work in respect of which any fee has been charged or received.

Return duly signed to be a Certificate that Works are agreeable to Act.

53. Every such return shall be signed by such surveyor, and shall be deemed to be a certificate that all the works enumerated therein as completed have been done in all respects agreeably to this Act, according to the best of his knowledge and belief, and that they have been duly surveyed by him.

Superintending Architect to audit Accounts of Fees charged by District Surveyors, and to report in case of Excess.

54. The officer hereinafter mentioned as the Superintending Architect of Metropolitan Buildings, or such other officer as the Metropolitan Board of Works appoint, shall from time to time examine the said monthly returns made by the district surveyors; and in case any fees therein specified appear to such officer to be unauthorized by this Act, or to exceed in amount the rates hereby made payable, or in case any such account appears to be in any respect fraudulent or untrue, he shall make his report in writing to that effect to the Metropolitan Board of Works, who shall thereupon take such steps in the matter as they deem expedient.

POWERS OF METROPOLITAN BOARD OF WORKS.

Power for Metropolitan Board of Works to modify Rules.

55. The Metropolitan Board of Works may, by order, made with the consent of her Majesty in Council, alter, in such manner as they may think fit, the rules for the regulation of the thickness of walls contained in the first schedule hereto.

Buildings to which Rules of Act are inapplicable.

56. Whenever any builder is desirous of erecting any iron building, or any other building to which the rules of this Act are inapplicable, he shall make an application to the Metropolitan Board of Works, stating such desire, and setting out a plan of the proposed building, with such particulars as to the construction thereof as may be required by the said Board; and the latter, if satisfied with such plan and particulars, shall signify their approval of the same, and thereupon such building may be constructed according to such plan and particulars; but it shall not be lawful for such Board to authorize any warehouse or other building, used either wholly or in part for the purposes of trade or manufacture, to be erected of greater dimensions than two hundred and sixteen thousand cubic feet, unless it is divided by party walls in manner hereinbefore required.

Power of Metropolitan Board to make General Rules.

57. The said Metropolitan Board may, for the purpose of regulating the proceedings of such applicants as aforesaid, from time to time issue such general rules as to the time and manner of making such applications, as to the plans to be presented, as to the expenses to be incurred, and as to any other matter or thing connected therewith, as they may think fit.

Approval of Board how signified.

58. The approval by the Metropolitan Board of Works of any plans or particulars, in pursuance of the foregoing provisions, shall be signified by writing under the hand of the Superintending Architect of Metropolitan Buildings, and countersigned by the Chairman of such Board, or by any other officer appointed by the Board.

Board to issue Forms of Notices.

59. The said Metropolitan Board may from time to time prepare or sanction forms of the various notices required by this Act, and may from time to time make such alterations therein as they deem requisite; and they shall cause every such form to be sealed with the seal of the Board, or marked with some other distinguishing mark; and any notice made in a form sanctioned by the Board shall in all proceedings be held sufficient in law.

Expenses of Orders to be borne by Builders.

60. All expenses incurred in and about the obtaining such approval of the Metropolitan Board of Works as aforesaid, shall be paid by the builder to the said Superintending Architect, or to such other person as the said Board may appoint, and in default of payment may be recovered in a summary manner.

District Surveyor to see Plans carried into execution.

61. A copy of any plans and particulars, approved by the Metropolitan Board of Works, shall be furnished to the surveyor within whose district the building to which such plans and particulars relate is situate, and thereupon it shall be the duty of such district surveyor to ascertain that the same is built in accordance with the said plans and particulars.

Power to Metropolitan Board to appoint Superintending Architect and Clerks.

62. The Metropolitan Board of Works may, for the purpose of aiding in the execution of this Act, appoint some fit person, to be called the "Superintending Architect of Metropolitan Buildings," together with such number of clerks as they think fit; such architect and clerks shall be removable by the said Metropolitan Board, and shall perform such duties as the said Board direct; but it shall not be lawful for any Superintending Architect to practise as an architect, or to follow any other occupation.

Superintending Architect may appoint Deputy, with Consent.

63. If the Superintending Architect is prevented by illness, infirmity, or any other unavoidable circumstance, from attending to the duties of his office, he may, with the consent of the Metropolitan Board of Works, appoint some other person as his deputy, to perform all his duties for such time as he may be temporarily prevented from executing them.

Salaries to Architects and Clerks.

64. There shall be paid to such Superintending Architect and clerks such salaries as the said Metropolitan Board may from time to time direct.

EXPENSES.

Power of Metropolitan Board to pay Salaries.

65. The said Metropolitan Board may at any time hereafter, by order, cause such fixed salary as they may determine to be paid to any district surveyor by way of remuneration instead of fees, provided the amount of such remuneration be not less than the amount of the average of the fees for the last three years; and thereupon such surveyor shall pay all fees received by him under this Act into the hands of the said Superintending Architect.

Monies received by Superintending Architect to be paid to the Metropolitan Board.

66. All monies received by the Superintending Architect in pursuance of this Act shall be accounted for and paid by him into the hands of the treasurer of the said Metropolitan Board, at such time and in such manner as the said Board may direct.

Metropolitan Board may pay Salaries out of Rates.

67. The said Metropolitan Board may at any time hereafter provide, either wholly or partially, for the payment of salaries to the district surveyors, or to any of them, out of the rates leviable by such Board, in pursuance of the said Act for the better Local Management of the Metropolis, and may thereupon abolish or reduce any fees hereby made payable to the district surveyors.

Expenses, how borne.

68. All expenses of carrying into execution this Act, not hereby otherwise provided for, shall be deemed to be expenses incurred by the said Metropolitan Board in the execution of the said Act for the better Local Management of the Metropolis, and shall be raised and paid accordingly.

PART II.

DANGEROUS STRUCTURES.

Survey to be made of dangerous Structures.
8 *Vict. c.* 84, *s.* 40.

69. Whenever it is made known to the Commissioners hereinafter named that any structure (including in such expression any building, wall, or other structure, and anything affixed to or projecting from any building, wall, or other structure) is in a dangerous state, such Commissioners shall require a survey of such structure to be made by the district surveyor, or by some other competent surveyor, and it shall also be the duty of the district surveyor to make known to the said Commissioners any information he may receive with respect to any structure being in such state as aforesaid.

Definition of "Commissioners."

70. In cases where any such structure is situate within the city of *London* or the liberties thereof, hereinafter included under the expression "the city of *London*," the expression "the Commissioners" shall mean "the Commissioners of Sewers of the city of *London*;" but when such structure is situate elsewhere it shall mean "the Commissioners of Police of the Metropolis," or such one of them as may be authorized by one of her Majesty's principal secretaries of state to act in the matter of this Act.

Surveyor, on completion of Survey, to give Certificate.

71. Upon the completion of his survey the surveyor employed shall certify to the said Commissioners his opinion as to the state of any such structure as aforesaid.

Proceedings to be taken in respect of Certificate.

72. If such certificate is to the effect that such structure is not in a dangerous state, no further proceedings shall be had in respect thereof, but if it is to the effect that the same is in a dangerous state, the Commissioners shall cause the same to be shored up, or otherwise secured, and a proper hoard or fence to be put up for the protection of passengers, and shall cause notice in writing to be given to the owner or occupier of such structure requiring him forthwith to take down, secure, or repair the same, as the case requires.

On Non-compliance with Notice, Justice to summon Owner, &c., and make Order to comply with Requisition.

73. If the owner or occupier to whom notice is given as last aforesaid fails to comply, as speedily as the nature of the case permits, with the requisition of such notice, the said Commissioners may make complaint thereof before a justice of the peace; and it shall be lawful for such justice to order the owner, or on his default the occupier, of any such structure to take down, repair, or otherwise secure, to the satisfaction of the surveyor who made such survey as aforesaid, or of such other surveyor as the said Commissioners may appoint, such structure or such part thereof as appears to him to be in a dangerous state, within a time to be fixed by such justice; and in case the same is not taken down, repaired, or otherwise secured within the time so limited, the said Commissioners may with all convenient speed cause all or so much of such structure as is in a dangerous condition to be taken down, repaired, or otherwise secured, in such manner as may be requisite; and all expenses incurred by the said Commissioners in respect of any dangerous structure by virtue of the second part of this Act shall be paid by the owner of such structure, but without prejudice to his right to recover the same from any lessee or other person liable to the expenses of repairs.

If Owner cannot be found, Commissioners may sell structure, giving the Surplus to Owner, &c.

74. If such owner cannot be found, or if, on demand, he refuses or neglects to pay the aforesaid expenses, the said Commissioners, after giving three months' notice of their intention to do so, by posting a printed or written notice in a conspicuous place on the structure in respect of which or of part of which they have incurred expense, or on the land whereon it stands, may sell such structure, and they shall, after deducting from the proceeds of such sale the amount of all expenses incurred by them, restore the surplus (if any) to the owner.

Payments by or to the Commissioners, how made.

75. All payments hereby directed to be made by or to the Commissioners shall, in the cases of payments in respect of any structure situate within the city of *London*, be made by or to the Chamberlain of the City, out of or to the consolidated rate made by the Commissioners of Sewers, and in the cases of payments in respect of any structure situate elsewhere within the limits of this Act be made by or to the Receiver of Metropolitan Police, in the same manner in which payments are made by or to such chamberlain and receiver respectively in the ordinary course of their business; but no Commissioner or other officer shall be liable in respect of any loss that may be sustained by any person in consequence of the exercise by the said Commissioners of the powers hereby given them, unless such loss happens through the wilful default of such Commissioner or other officer.

Surplus, how to be applied if no Demand made for it.

76. In cases where any surplus is hereby made payable to any owner, if no demand for the same is made by any person entitled thereto within one year, then the same shall be paid into the Bank of *England*, in the name and with the privity of the Accountant-General of the Court of Chancery, to be placed to his account there to the credit of the owner (describing him, so far as the Commissioners can), subject to the control of the Court, and to be paid out to the owner on his applying by petition, and proving his title thereto.

Fees to District Surveyor.

77. There shall be paid to the district surveyor, or to such other surveyor as aforesaid, in respect of his services under the second part of this Act, such fees, not exceeding the amounts specified in the second part of the second schedule hereto, as may from time to time be directed by the said Metropolitan Board.

Metropolitan Board may appoint special Fees for Services not provided for.

78. If any special service is required to be performed by the district surveyor, or by such other surveyor as aforesaid, under the second part of this Act, for which no fee is specified in the said schedule, the said Metropolitan Board may order such fee to be paid for such service as they think fit.

Fees to be deemed Part of Expenses.

79. All fees paid to the district surveyor, or to such other surveyor as aforesaid, by virtue of the second part of this Act, shall be deemed to be expenses incurred by the said Commissioners in the matter of the dangerous structure in respect of which such fees are paid, and shall be recoverable by them from the owner accordingly.

Justice of Peace may cause Inmates to be removed from dangerous Structures.

80. In cases where a structure has been certified by a district surveyor, or such other surveyor as aforesaid, to be dangerous to its inmates, a justice of the peace may, if satisfied of the correctness of such certificate, upon the application of the said Commissioners, by order under his hand direct any inmates of such structure to be removed therefrom by a constable or other peace-officer, and if they have no other abode he may require them to be received into the workhouse established for the reception of the poor of the place in which such structure is situate.

Powers of Commissioners to appoint Officers.

81. Subject to the approval of one of her Majesty's principal secretaries of state, the said Commissioners may appoint such persons at such salaries, and make such regulations, as they think fit for carrying into execution the second part of this Act; and all expenses incurred by them not hereby otherwise provided for shall, in the case of expenses incurred by the said Commissioners of Police, be deemed to be expenses incurred by them in respect of the police force of which they are Commissioners, and be payable accordingly; and all expenses incurred by the said Commissioners of Sewers shall be paid out of the said consolidated rate.

PART III.

PARTY STRUCTURES.

PRELIMINARY.

Definition of Building Owner and Adjoining Owner.

82. In the construction of the following provisions relating to party structures, such one of the owners of the premises separated by or adjoining to any party structure as is desirous of executing any work in respect to such party structure shall be called the building owner, and the owner of the other premises shall be called the adjoining owner.

RIGHTS OF BUILDING AND ADJOINING OWNERS.

Rights of Building Owner.

83. The building owner shall have the following rights in relation to party structures; that is to say,

(1.) A right to make good or repair any party structure that is defective or out of repair:

(2.) A right to pull down and rebuild any party structure that is so far defective or out of repair as to make it necessary or desirable to pull down the same:

(3.) A right to pull down any timber or other partition that divides any buildings, and is not conformable with the regulations of this Act, and to build instead a party wall conformable thereto:

(4.) In the case of buildings having rooms or stories the property of different owners intermixed, a right to pull down such of the said rooms or stories or any part thereof as are not built in conformity with this Act, and to rebuild the same in conformity with this Act:

(5.) In the case of buildings connected by arches or communications over public ways or over passages belonging to other persons, a right to pull down such of the said buildings, arches, or communications, or any part thereof, as are not built in conformity with this Act, and to rebuild the same in conformity with this Act:

(6.) A right to raise any party structure permitted by this Act to be raised, or any external wall built against such party structure, upon condition of making good all damage occasioned thereby to the adjoining premises or to the internal finishings and decorations thereof, and of carrying up to the requisite height all flues and chimney stacks belonging to the adjoining owner on or against such party structure or external wall:

(7.) A right to pull down any party structure that is of insufficient strength for any building intended to be built, and to rebuild the same of sufficient strength for the above purpose, upon condition of making good all damage occasioned thereby to the adjoining premises, or to the internal finishings and decorations thereof:

(8.) A right to cut into any party structure upon condition of making good all damage occasioned to the adjoining premises by such operation:

(9.) A right to cut away any footing or any chimney breasts, jambs, or flues projecting from any party wall, in order to erect an external wall against such party wall, or for any other purpose, upon condition of making good all damage occasioned to the adjoining premises by such operation:

(10.) A right to cut away or take down such parts of any wall or building of an adjoining owner as may be necessary in consequence of such wall or building overhanging the ground of the building owner, in order to erect an upright wall against the same, on condition of making good any damage sustained by the wall or building by reason of such cutting away or taking down:

(11.) A right to perform any other necessary works incident to the connexion of party structure with the premises adjoining thereto:

But the above rights shall be subject to this qualification, that any building which has been erected previously to the time of this Act coming into operation shall be deemed to be conformable with the provisions of this Act if it is conformable with the provisions of an Act passed in the fourteenth year of his late Majesty King *George* the Third, chapter seventy-eight, or with the provisions of the said Act of the eighth year of her present Majesty, chapter eighty-four.

Rights of Adjoining Owner.

84. Whenever the building owner proposes to exercise any of the foregoing rights with respect to party structures, the adjoining owner may require the building owner to build on any such party structure certain chimney jambs, breasts, or flues, or certain piers or recesses, or any other like works for the convenience of such adjoining owner; and it shall be the duty of the building owner to comply with such requisition in all cases where the execution of the required works will not be injurious to the building owner, or cause to him unnecessary inconvenience or unnecessary delay in the exercise of his right; and any difference that arises between any building owner and adjoining owner in respect of the execution of such works as aforesaid shall be determined in manner in which differences between building owners and adjoining owners are hereinafter directed to be determined.

Rules as to Exercise of Rights by Building and Adjoining Owners.

85. The following rules shall be observed with respect to the exercise by building owners and adjoining owners of their respective rights:—

(1.) No building owner shall, except with the consent of the adjoining owner, or in cases where any party structure is dangerous, in which cases the provisions hereby made as to dangerous structures shall apply, exercise any right hereby given in respect of any party structure, unless he has given at the least three months' previous notice to the adjoining owner by delivering the same to him personally, or by sending it by post in a registered letter addressed to such owner at his last known place of abode:

(2.) The notice so given shall be in writing or printed, and shall state the nature of the proposed work, and the time at which such work is proposed to be commenced:

(3.) No building owner shall exercise any right hereby given to him in such manner or at such time as to cause unnecessary inconvenience to the adjoining owner:

(4.) Upon the receipt of such notice the adjoining owner may require the building owner to build or may himself build on any such party structure any works to the construction of which he is hereinbefore mentioned to be entitled:

(5.) Any requisition so made by an adjoining owner shall be in writing or printed, and shall be delivered personally to the building owner within one month after the date of the notice being given by him, or be sent by post in a registered letter addressed to him at his last known place of residence: It shall specify the works required by the adjoining owner for his convenience, and shall, if necessary, be accompanied with explanatory plans and drawings:

(6.) If either owner does not, within fourteen days after the delivery to him of any notice or requisition, express his consent thereto, he shall be considered as having dissented therefrom, and thereupon a difference shall be deemed to have arisen between the building owner and the adjoining owner:

(7.) In all cases not hereby specially provided for where a difference arises between a building owner and adjoining owner in respect of any matter arising under this Act, unless both parties concur in the appointment of one surveyor they shall each appoint a surveyor, and the two surveyors so appointed shall select a third surveyor, and such one surveyor or three surveyors, or any two of them, shall settle any matter in dispute between such building and adjoining owner, with power by his or their award to determine the right to do, and the time and manner of doing any work, and generally any other matter arising out of or incidental to such difference; but any time so appointed for doing any work shall not commence until after the expiration of such period of three months, as is hereinbefore mentioned:

(8.) Any award given by such one surveyor, or by such three surveyors, or any two of them, shall be conclusive, and shall not be questioned in any court, with this exception, that either of the parties to the difference may appeal therefrom to the County Court within fourteen days from the date of the delivery of any such award as aforesaid, and such County Court may, subject as hereinafter mentioned, rescind, or modify the award so given in such manner as it thinks just:

(9.) If either party to the difference makes default in appointing a surveyor for ten days after notice has been given to him by the other party in manner aforesaid to make such appointment, the party giving the notice may make the appointment in the place of the party so making default:

(10.) The costs incurred in obtaining any such award as aforesaid shall be paid by such party as such one surveyor, or three surveyors, or any two of them, may determine:

(11.) If the appellant from any such award as aforesaid, on appearing before the County Court, declares his unwillingness to have the matter decided by such Court, and proves to the satisfaction of the judge of such Court that in the event of the matter being decided against him, he will be liable to pay a sum, exclusive of costs, exceeding fifty pounds, and give security, to be approved by such judge, duly to prosecute his appeal and to abide the event thereof, all proceedings in the County Court shall thereupon be stayed; and it shall be lawful for such appellant to bring an action in one of her Majesty's superior courts of law at *Westminster* against the other party to the difference; and the plaintiff in such action shall deliver to the defendants an issue or issues whereby the matters in difference between them may be tried; and the form of such issue or issues, in case of dispute, or in case of the non-appearance of the defendant, shall be settled by the Court in which the action is brought; and such action shall be prosecuted and issue or issues tried in the same manner and subject to the same incidents in and subject to which actions are prosecuted and issues tried in other cases within the jurisdiction of such Court, or as near thereto as circumstances admit:

(12.) If the parties to any such action agree as to the facts, a special case may be stated for the opinion of any such Superior Court as aforesaid, and any case so stated may be brought before the Court in like manner, and subject to the same incidents in and subject to which other special cases are brought before such Court, or as near thereto as circumstances admit; and any costs that may have been incurred in the County Court by the parties to such action as is mentioned in this section, shall be deemed to be costs incurred in such action, and be payable accordingly.

Power for Building Owner to make Entry on Premises to effect Works Penalty on Persons obstructing.

86. Whenever any building owner has become entitled, in pursuance of this Act, to execute any work, it shall be lawful for him, his servants, agents, or workmen, at all usual times of working, to enter on any premises, for the purpose of executing and to execute such work, removing any furniture, or doing any other thing that may be necessary, and if such premises are closed, he or they may, accompanied by a constable or other officer of the peace, break open any doors in order to such entry; and any owner or other person that hinders or obstructs any workman employed for any of the purposes aforesaid, or wilfully damages or injures the said work, shall incur for every such offence a penalty not exceeding ten pounds, to be recovered before a justice of the peace.

Security to be given by Building Owner, if required by Adjoining Owner.

87. Any adjoining owner may, if he thinks fit, by notice in writing given by himself or his agent, require the building owner, before commencing any work which he may be authorized by this Act to execute, to give such security as may be agreed upon, or in case of difference may be settled by the judge of the County Court, for the payment of all such costs and compensation in respect of such work as may be payable by such building owner.

Rules as to Expenses in respect of Party Structure.

88. The following rules shall be observed as to expenses in respect of any party structure; (that is to say,)

As to expenses to be borne jointly by the building owner and adjoining owner:

(1.) If any party structure is defective or out of repair the expense of making good or repairing the same shall be borne by the building owner and adjoining owner in due proportion, regard being had to the use that each owner makes of such structure:

(2.) If any party structure is pulled down and rebuilt by reason of its being so far defective or out of repair as to make it necessary or desirable to pull down the same, the expense of such pulling down and rebuilding shall be borne by the building owner and adjoining owner in due proportion, regard being had to the use that each owner makes of such structure:

(3.) If any timber or other partition dividing any building is pulled down, in exercise of the right hereinbefore vested in a building owner, and a party structure built instead thereof, the expense of building such party structure, and also of building any additional party structures that may be required by reason of such partition having been pulled down, shall be borne by the building owner and adjoining

owner in due proportion, regard being had to the use that each owner makes of such party structure, and to the thickness required to the respective buildings parted thereby:

(4.) If any room or stories, or any part of rooms or stories, the property of different owners, and intermixed in any building, are pulled down in pursuance of the right hereinbefore vested in any building owner, and rebuilt in conformity with this Act, the expense of such pulling down and rebuilding shall be borne by the building owner and adjoining owner in due proportion, regard being had to the use that each owner makes of such rooms or stories:

(5.) If any arches or communications, or any parts thereof, are pulled down in pursuance of the right hereinbefore vested in any building owner, and rebuilt in conformity with this Act, the expense of such pulling down and rebuilding shall be borne by the building owner and adjoining owner in due proportion, regard being had to the use that each owner makes of such arches or communications:

As to expenses to be borne by building owner:

(6.) If any party structure or external wall built against the same is raised in pursuance of the power hereinbefore vested in any building owner, the expense of raising the same, and of making good all such damage, and of carrying up to the requisite height all such flues and chimnies as are hereinbefore required to be made good and carried up, shall be borne by the building owner:

(7.) If any party structure which is of proper materials and sound, or not so far defective or out of repair as to make it necessary or desirable to pull down the same, is pulled down and rebuilt by the building owner, the expense of pulling down and rebuilding the same, and of making good all such damage as is hereinbefore required to be made good, shall be borne by the building owner:

(8.) If any party structure is cut into by the building owner, the expense of cutting into the same, and of making good any damage hereinbefore required to be made good, shall be borne by such building owner:

(9.) If any footing, chimney breast, jambs, or floor is cut away in pursuance of the powers hereinbefore vested in any building owner, the expense of such cutting away, and of making good any damage hereinbefore required to be made good, shall be borne by the building owner.

Account of Expenses of Works to be delivered to Adjoining Owner within One Month.

89. Within one month after the completion of any work which any building owner is by this Act authorized or required to execute, and the expense of which is in whole or in part to be borne by an adjoining owner, such building owner shall deliver to the adjoining owner an account in writing of the expense of the work, specifying any deduction to which such adjoining owner or other person may be entitled in respect of old materials, or in other respects; and every such work as aforesaid shall be estimated and valued at fair average rates and prices, according to the nature of the work and the locality, and the market price of materials and labour at the time.

Adjoining Owner may appeal against Account.

90. At any time within one month after the delivery of such account, the adjoining owner, if dissatisfied therewith, may declare his dissatisfaction to the party delivering the same, by notice in writing given by himself or his agent, and specifying his objections thereto; and upon such notice having been given, a difference shall be deemed to have arisen between the parties, and such difference shall be determined in manner hereinbefore provided for the determination of differences between building and adjoining owners.

Building Owner may recover, if no Appeal made.

91. If within such period of one month as aforesaid the party receiving such account does not declare in manner aforesaid his dissatisfaction therewith, he shall be deemed to have accepted the same, and shall pay the same, on demand, to the party delivering the account, and if he fails to do so the amount so due may be recovered as a debt.

Penalty on Delay of Payment by Adjoining Owner.

92. Where the adjoining owner is liable to contribute to the expenses of building any party structure, until such contribution is paid the building owner at whose expense the same was built shall stand possessed of the sole property in such structure.

As to Expenses incurred on Requisition of Adjoining Owner.

93. Where any building owner has incurred any expenses on the requisition of an adjoining owner, the adjoining owner making such requisition shall be liable for all such expenses, and in default of payment the same may be recovered from him as a debt.

Penalty on Building Owner failing to execute required Works.

94. Where any building owner is, by the third part of this Act, liable to make good any damage he may occasion to the property of the adjoining owner by any works authorized to be executed by him, or to do any other thing upon condition of doing which his right to execute such works is hereby limited to arise, and such building owner fails within a reasonable time to make good such damage, or to do such thing, he shall incur a penalty, to be recovered before a justice of the peace, not exceeding twenty pounds for each day during which such failure continues.

Consent, how given on behalf of Persons under Disability.

95. Where, in pursuance of this Act, any consent is required to be given, any notice to be served, or any other thing to be done by, on, or to any owner under disability, such consent may be given, such notice may be served, and such thing may be done by, on, or to the following persons, on behalf of such persons under disability; that is to say,

By, on, or to a husband, on behalf of his wife:

By, on, or to a trustee, on behalf of his cestui que trust:

By, on, or to a guardian or committee, on behalf of an infant, idiot, or lunatic.

Consent, how given on behalf of Persons not to be found.

96. Where any consent is required to be given or any other thing to be done by any owner in pursuance of this Act, if there is no owner capable of giving such consent or of doing such thing, and no person empowered by this Act to give such consent or to do such thing on behalf of such owner, or if any owner so capable, or any person so empowered, cannot be found, the judge of the County Court shall have power to give such consent or do or cause to be done such thing on behalf of such owner, upon such terms and subject to such conditions as he may think fit, having regard alike to the nature and purpose of the subject-matter in respect of which such consent is to be given, and to the fair claims of the parties on whose behalf such consent is to be given; and such judge shall have power to dispense with the service of any notice which would otherwise be required to be served.

PART IV.

MISCELLANEOUS PROVISIONS.

Payment of Expenses by Owners.

97. Where it is hereby declared that expenses are to be borne by the owner of any premises (including in the term "owner" the adjoining and building owner respectively), the following rules shall be observed with respect to the payment of such expenses:

(1.) The owner immediately entitled in possession to such premises, or the occupier thereof, shall in the first instance pay such expenses, with this limitation, that no occupier shall be liable to pay any sum exceeding in amount the rent due or that will thereafter accrue due from him in respect of such premises during the period of his occupancy:

(2.) If there are more owners than one, every owner shall be liable to contribute to such expenses in proportion to his interest:

(3.) If any difference arises as to the amount of contribution, such difference shall be decided by arbitration, to be conducted in manner directed by the Companies Clauses Consolidation Act, 1845; and for that purpose the clauses of the said Act with respect to the settlement of disputes by arbitration shall be incorporated with this Act:

(4.) If some of the owners liable to contribution cannot be found, the deficiency so arising shall be divided amongst the parties that can be found:

(5.) Any occupier of premises who has paid any expenses under this Act may deduct the amount so paid from any rent payable by him to any owner of the same premises; and any owner of premises who has paid more than his due proportion of any expenses may deduct the amount so overpaid from any rent that may be payable by him to any other owner of the same premises:

(6.) If default is made by any owner or occupier in payment of any expenses hereby made payable by him in the first instance, or if default is made by any owner in payment of any other expenses or monies due from him by way of contribution or otherwise in pursuance of this Act, then in addition to any other remedies hereby provided, such expenses and monies, if arising in respect of any matter within the provisions of the third part of this Act, may be recovered as a debt in due course of law, but if arising in respect of any other matter under this Act may be recovered in a summary manner.

Rules as to Service of Notices, Summonses, and Orders.

98. The following rules shall be observed with respect to the giving or service of any notice, summons, or order directed to be given or served under this Act in cases not hereinbefore provided for:

(1.) A notice, summons, or order may in all cases be served personally:

(2.) A notice, summons, or order may be served on any builder by leaving the same or sending it in a registered letter addressed to him at his place of address as stated by him to the district surveyor, or by putting up such notice, summons, or order on a conspicuous part of the building or premises to which the same relates:

(3.) A notice, summons, or order may be served on the owner or occupier of any premises by leaving the same with the occupier of such premises, or with some inmate of his abode, or if there is no occupier, by putting up such notice, summons, or order on a conspicuous part of the building or premises to which the same relates; and it shall not be necessary to name the owner or occupier of such premises; nevertheless, when the owner of any such premises and his residence, or that of his agent, are known to the party by whom or on whose behalf any notice, summons, or order is intended to be served, it shall be the duty of such party to send every such notice, summons, or order by the post in a registered letter addressed to the residence or last known residence of such owner or of his agent:

(4.) A notice, summons, or order may be served on any district surveyor by leaving the same at his office.

As to things authorized to be done by a County Court—11 & 12 Vict. c. lxxi.

99. Whenever anything is hereby authorized to be done by a County Court it may be done as follows; that is to say, if such thing arises in respect of any structure or other subject matter situate within the city of *London* or the liberties thereof, by the Sheriffs Court established by a local Act passed in the eleventh year of the reign of her Majesty, chapter seventy-one, intituled *An Act for the more easy Recovery of Small Debts and Demands within the City of* London *or the Liberties thereof*, and if such thing arises in respect of any structure or other subject matter situate elsewhere, by the County Court having jurisdiction within the district in which such structure or other subject matter is situate.

Manner of Determining Differences.

100. In cases where jurisdiction is hereby given to a County Court, such Court may from time to time make such order in respect of matters so brought before it as it may think fit, with power to settle the time and manner of executing any work, or of doing any other thing, and to put the parties to the case upon such terms as respects the execution of the work as it thinks fit: it shall also have power to award or refuse costs according to circumstances, and to settle the amount thereof.

Form of Proceedings in County Court.

101. Proceedings in any County Court, in respect of any matter arising under this Act, shall be conducted in the same manner as proceedings are conducted in any case within the ordinary jurisdiction of such Court, or as near thereto as circumstances permit; and orders made by the judge of any such court may be enforced by execution, committal, or otherwise, in a similar manner to that in which the orders of such Court are ordinarily enforced.

Appeal from Decision of County Court.

102. If either party, in any case over which jurisdiction is hereby given to a County Court, feels aggrieved with the decision of such Court in respect of any point of law, or the admission or rejection of any evidence, he may appeal therefrom in the same manner, and upon the same terms, in and upon which he might have appealed from the decision of such Court in any case within the ordinary jurisdiction of such Court, or as near thereto as circumstances permit; but no such appeal shall be allowed unless the value of the matter in difference between the parties exceeds fifty pounds; and the opinion of the judge before whom the case is tried as to such value shall be conclusive.

Recovery of Penalties.

103. All penalties under this Act, and all fees, monies, costs, or expenses by this Act directed to be recovered in a summary manner, may be recovered in manner directed by an Act passed in the eleventh and twelfth years of the reign of her present Majesty Queen *Victoria*, chapter forty-three, intituled *An Act to facilitate the Performance of the Duties of Justices of the Peace out of Sessions within* England *and* Wales *with respect to summary Convictions and Orders*; and whenever anything is hereby authorized or required to be done by or before a justice of the peace, it may be done as follows: that is to say, if such thing arises in respect of any building or wall situate within the city of *London*, by or before one or more justice or justices of the peace for the said city, or by any metropolitan police magistrate, and if such thing arises in respect of any building or wall situate elsewhere within the limits of this Act, by or before any metropolitan police magistrate.

Application of Penalties.

104. Any justice of the peace in any case over which jurisdiction is hereby given to him may make such order as to the costs of any proceedings of which he has cognizance as he thinks just; he may also direct the whole or any part of any penalty imposed by him under this Act to be applied in or towards payment of the costs of the proceedings; and, subject to such direction, all penalties shall be paid into the hands of the treasurer of the said Metropolitan Board, to be applied in such manner as the said Board thinks fit.

Provisions as to Limitation of Time when due Notice has not been given.

105. In cases where any building has been erected or work done without due notice being given to the district surveyor, the district surveyor may, at any time within one month after he has discovered that such building has been erected or work done, enter the premises for the purpose of seeing that the regulations of this Act have been complied with, and the time during which the district surveyor may take any proceeding, or do anything authorized or required by this Act to be done by him, in respect of such building or work, shall begin to run from the date of his discovering that such building has been erected or work done.

Power to Appeal to Superior Courts.

106. In every case, except in respect of fees of a district surveyor, in which jurisdiction is hereinbefore given to a justice of the peace, if either party to any such case is dissatisfied with the determination of the justice so convicting, in respect of any point of law, or of the admission or rejection of any evidence, such party may, upon giving notice within seven days to the other party of his intention to appeal, appeal therefrom to any of the Superior Courts of Common Law at *Westminster;* subject to this restriction, that no such appeal shall be made by any district surveyor except with the consent of the justice before whom the case is tried, and that no such appeal shall be made by any other party to the case except upon giving such security for costs, and, if the case requires it, in addition thereto, such undertaking in respect of desisting in the meantime from any works complained of, or in respect of any other matter or thing arising in the case, as the justice thinks fit.

Form of Appeal.

107. Any appeal so made shall be in the form of a special case, to be agreed on by both parties, or, if the parties cannot agree, to be settled by the justice from whose decision the appeal is made; and such case shall be transmitted by the appellant to the Rule department of the Master's office in the court in which the appeal is to be brought, and be heard in manner provided by the practice of such court.

Notice of Action.

108. No writ or process shall be sued out against any district surveyor or other person for anything done or intended to be done under the provisions of this Act until the expiration of one month next after notice in writing has been delivered to him, or left at his office or usual place of abode, stating the cause of action, and the name and place of abode of the intended plaintiff, and of his attorney or agent in the cause; and upon the trial of any such action the plaintiff shall not be permitted to go into evidence of any cause of action which is not stated in such last-mentioned notice; and unless such notice is proved, the jury shall find for the defendant; and every such action shall be brought or commenced within six months next after the accrual of the cause of action, and not afterwards, and shall be laid and tried in the county or place where the cause of action occurred, and not elsewhere; and the defendant shall be at liberty to plead the general issue, and give this Act and all special matter in evidence thereunder.

PART V.

REPEAL OF FORMER ACTS AND TEMPORARY PROVISIONS.

REPEAL.

Repeal of 8 & 9 *Vict. c.* 84, *except ss.* 54 *to* 63, *and* 9 & 10 *Vict. c.* 5.

109. From and after the commencement of this Act, the following Acts, that is to say, an Act passed in the eighth year of the reign of her present Majesty, chapter eighty-four, and intituled *An Act for regulating the Construction and the Use of Buildings in the Metropolis and its Neighbourhood*, with the exception of the sections relating to dangerous and noxious businesses, and numbered respectively fifty-four, fifty-five, fifty-six, fifty-seven, fifty-eight, fifty-nine, sixty, sixty-one, sixty-two, and sixty-three, and an Act passed in the ninth year of the reign of her present Majesty, chapter five, and intituled *An Act to amend an Act for regulating the Construction and Use of Buildings in the Metropolis and its Neighbourhood*, are throughout the limits of this Act and elsewhere hereby repealed, subject to the following provisions; that is to say,

First, that such repeal shall not affect any proceedings authorized to be taken by the said Acts or either of them in respect of any act, omission, penalty, matter, or thing, and pending before the official referees or any other tribunal at the time of the commencement of this Act:

Second, that in cases where any act, omission, or thing has occurred previously to the time of the commencement of this Act, in respect of which, if this Act had not passed, proceedings might have been taken under the said Acts or either of them, then proceedings in respect of such act, omission, or thing may be had under this Act in manner following; that is to say, if the matter in question is anything relating to the rights of building and adjoining owners in respect of party structures, proceedings may be had in the County Court, but if the matter in question relates to the recovery of any penalty or to any other thing, proceedings may be had before any justice of the peace:

Third, that so much of the Act of the fourteenth year of King *George* the Third, chapter seventy-eight, as was excepted from the operation of the said Act of the eighth year of her present Majesty, chapter eighty-four, (that is to say,) the sections numbered respectively seventy-four, seventy-five, seventy-six, seventy-seven, seventy-eight, eighty, eighty-one, eighty-two, eighty-three, eighty-four, eighty-five, and eighty-six, shall continue in full force.

As to Contracts made previously to passing of Act.

110. Any contract made previously to the passing of this Act for the erection of a new building shall be carried into effect in the same manner as if this Act had been passed at the time of the making thereof, and the necessary deviations from the terms of such contract may be made accordingly; and if any dispute arises in respect of any loss sustained by any party to such contract by reason of such necessary deviation, such dispute shall be determined by the County Court; and whenever any costs or expenses have been paid by any owner in pursuance of this Act, then as to any structure held under any lease or agreement made previously to the commencement of this Act it shall be lawful for such owner to recover the same from the persons hitherto liable by law, or by such existing lease or contract, to maintain or repair the structure in respect of which such costs and expenses have been incurred.

Liabilities under Contract between Landlord and Tenant not to be affected.

111. Nothing herein contained shall vary or affect the rights or liabilities as between landlord and tenant under any contract between them.

As to Iron Buildings constructed before this Act comes into operation.

112. In cases where any iron building has been constructed or is in the progress of construction previously to the time at which this Act comes into operation, and doubts are entertained whether such building is permitted by law, any person interested in such building may make an application to the Commissioners of Works and Buildings, to signify their approval of such building; and the Commissioners of Works and Buildings, upon being satisfied of the stability of such building, may approve of the same, and upon such approval being given such building shall be deemed to have been constructed in manner permitted by law, and this section shall come into operation immediately after the passing of this Act.

Compensation to Official Referees and Registrar.

113. The official referees and registrar of metropolitan buildings may, within six months from the time at which this Act comes into operation, apply to the Commissioners of her Majesty's Treasury for compensation in respect of the loss they have sustained by reason of the abolition of their offices; and the Commissioners shall take any such application into consideration, and award such compensation, either by way of a gross sum or annual payment, as they think just, having regard to the nature of the office, the time during which the applicant has held the same, and generally to the special circumstances of each case; and any compensation so given shall be paid out of monies to be provided by Parliament; and such compensation, when made by annual payment, shall be subject to this proviso, that if any such official referee or registrar is at any time thereafter appointed to any public office in respect of which he receives a salary, the payment of the compensation awarded to him under this Act shall be suspended so long as he receives such salary, if the amount thereof is greater than such compensation, or if not shall be diminished by the amount of such salary.

Compensation to Clerks in Office of Metropolitan Buildings.

114. Any person, except the said official referees and registrar, who at the time when this Act comes into operation is employed in the Office of Metropolitan Buildings may within six months from such time apply to the Metropolitan Board of Works for employment, and such Board shall thereupon take such application into consideration, and they shall either employ the applicant at a salary not less in amount than that which he enjoyed when in the said Office of Metropolitan Buildings, or at a less salary awarding to him compensation in respect of such diminution of salary, or they shall award to him such compensation, if any, as they, or in the event of the applicant feeling aggrieved with their decision, as the Commissioners of the Treasury, think just, having regard to the nature of the office, the time during which it has been held by the applicant, and generally to the special circumstances of the case; and any expenses incurred by the said Board in carrying into effect this section shall be deemed to be expenses incurred in the execution of the said Act for the better Local Management of the Metropolis, and be raised accordingly; nevertheless, if any such clerk or servant as aforesaid at any time thereafter is appointed to any public office, or to any office under the said Metropolitan Board, in respect of which he receives a salary, the payment of the compensation awarded to him under this Act shall be suspended so long as he receives such salary, if the amount thereof is greater than the amount of such compensation, or if not shall be diminished by the amount of such salary; but, notwithstanding anything herein contained, the Metropolitan Board may, in the event of their employing any person mentioned in this section, dismiss him, with the consent of the Treasury.

FIRST SCHEDULE.

PRELIMINARY.

Structure of Buildings.

1. Every building shall be enclosed with walls constructed of brick, stone, or other hard and incombustible substances, and the foundations shall rest on the solid ground, or upon concrete, or upon other solid substructure.

Construction of Walls of Brick, Stone, &c.

2. Every wall constructed of brick, stone, or other similar substances, shall be properly bonded and solidly put together with mortar or cement, and no part of such wall shall overhang any part underneath it, and all return walls shall be properly bonded together.

Extra Thickness of certain Stone Walls.

3. The thickness of every stone wall in which the beds of the masonry are not laid horizontally shall be one third greater than the thickness prescribed for stone walls in the rules hereinafter contained.

Thickness of Walls.

4. The thickness of every wall as hereinafter determined, shall be the minimum thickness.

Height of Story.

5. The height of every topmost story shall be measured from the level of its floor up to the under side of the tie of the roof, or up to half the vertical height of the rafters, when the roof has no tie; and the height of every other story shall be the clear height of such story exclusive of the thickness of the floor.

Height of External and Party Walls.

6. The height of every external and party wall shall be measured from the base of the wall to the level of the top of the topmost story.

Length of Walls.

7. Walls are deemed to be divided into distinct lengths by return walls, and the length of every wall is measured from the centre of one return wall to the centre of another; provided that such return walls are external, party, or cross walls of the thickness hereinafter required, and bonded into the walls so deemed to be divided.

Footings of Walls.

8. The projection of the bottom of the footing of every wall, on each side of the wall, shall be at least equal to one half of the thickness of the wall at its base; and the diminution of the footing of every wall shall be formed in regular offsets, and the height from the bottom of such footing to the base of the wall shall be at the least equal to one half of the thickness of the wall at its base.

PART I.

RULES FOR THE WALLS OF DWELLING HOUSES.

Thickness of Walls of Dwelling Houses.

1. The external and party walls of dwelling houses shall be made throughout the different stories of the thickness shown in the following table, arranged according to the heights and lengths of the walls, and calculated for walls up to one hundred feet in height, and supposed to be built of bricks not less than eight and a half inches and not more than nine and a half inches in length, the heights of the stories being subject to the condition hereinafter given.

2. TABLE. [*For this* TABLE, SEE *page* 8.]

Explanation of Tables.

3. In using the above table the height of the wall is to be reckoned on the first vertical column on the left hand of the table, and the length of the wall on the corresponding horizontal column. The thickness of the wall in each story is given in inches, and begins with the wall from the base upwards.

Qualification in case of certain Walls.

4. If any external or party wall, measured from centre to centre, is not more than twenty-five feet distant from any other external or party wall to which it is tied by the beams of any floor or floors, other than the ground floor, or the floor of any story formed in the roof, the length of such wall is not to be taken into consideration, and the thickness of the wall will be found in the second vertical column in the above table.

Condition in respect of Stories exceeding a certain Height.

5. If any story exceeds in height sixteen times the thickness prescribed for the walls of such story in the above table, the thickness of each external and party wall throughout such story shall be increased to one sixteenth part of the height of the story; but any such additional thickness may be confined to piers properly distributed, of which the collective widths amount to one fourth part of the length of the wall.

Restriction in case of certain Stories.

6. No story enclosed with walls less than thirteen inches in thickness shall be more than ten feet in height.

Thickness of Walls built of Materials other than such Bricks as aforesaid.

7. The thickness of any wall of a dwelling house, if built of materials other than such bricks as aforesaid, shall be deemed to be sufficient if made of the thickness required by the above tables, or of such less thickness as may be approved by the Metropolitan Board, with this exception, that in the case of walls built of stone in which the beds of the masonry are not laid horizontally, no diminution shall be allowed in the thickness required by the foregoing rules for such last-mentioned walls.

Rule as to Buildings not being Public Buildings or Buildings of the Warehouse Class.

8. All buildings, excepting public buildings, and such buildings as are hereinafter defined to be buildings of the warehouse class, shall, as respects the thickness of their walls, be subject to the rules given for dwelling houses.

PART II.

RULES FOR THE WALLS OF BUILDINGS OF THE WAREHOUSE CLASS.

Definition of Warehouse Class.

1. The warehouse class shall comprise all warehouses, manufactories, breweries, and distilleries.

Thickness at Base.

2. The external and party walls of buildings of the warehouse class shall at the base be made of the thickness shown in the adjoining table [Part II.], calculated for walls up to one hundred feet in height, and supposed to be built of bricks not less than eight and a half inches and not more than nine and a half inches in length.

3. TABLE. [*See* 2nd TABLE, *next column.*]

Explanation of Table.

4. The above table is to be used in the same manner as the table previously given for the walls of dwelling houses, and is subject to the same qualifications and conditions respecting walls not more than twenty-five feet distant from each other.

Thickness at Top of Walls and through Intermediate Space.

5. The thickness of the walls of buildings of the warehouse class at the top, and for sixteen feet below the top, shall be thirteen inches; and the intermediate parts of the wall between the base and such sixteen feet below the top shall be built solid throughout the space between straight lines drawn on each side of the wall, and joining the thickness at the base to the thickness at sixteen feet below the top, as above determined; nevertheless in walls not exceeding thirty feet in height the walls of the topmost story may be eight inches and a half thick.

Condition in respect of Stories exceeding a certain Height.

6. If in any story of a building of the warehouse class the thickness of the wall, as determined by the rules hereinbefore given, is less than one fourteenth part of the height of such story, the thickness of the wall shall be increased to one fourteenth part of the height of the story; but any such additional thickness may be confined to piers properly distributed, of which the collective widths amount to one fourth part of the length of the wall.

Thickness of Walls built of Materials other than such Bricks as aforesaid.

7. The thickness of any wall of a building of the warehouse class, if built of materials other than such bricks as aforesaid, shall be deemed to be sufficient if made of the thickness required by the above tables, or of such less thickness as may be approved by the Metropolitan Board, with this exception, that in the case of walls built of stone in which the beds of the masonry are not laid horizontally no diminution shall be allowed in the thickness required by the foregoing rules for such last-mentioned walls.

MISCELLANEOUS.

Cross Walls.

1. The thickness of a cross wall shall be two thirds of the thickness hereinbefore required for an external or party wall of the same dimensions, and belonging to the same class of buildings, but never less than eight and a half inches, and no wall subdividing any building shall be deemed to be a cross wall unless it is carried up two thirds of the height of the external or party walls, and unless the recesses and openings therein do not exceed one half of the vertical surface of the wall in each story.

Extra Thickness of certain Stone Walls.

2. The thickness of every stone wall in which the beds of the masonry are not laid horizontally shall be one third greater than the thickness prescribed in the rules aforesaid.

3. Buildings to which the preceding rules are inapplicable require the special sanction of the Metropolitan Board of Works.

SECOND SCHEDULE.

FEES PAYABLE TO DISTRICT SURVEYORS.

PART I.

Fees for New Buildings.

	s.	d.
For every building not exceeding four hundred square feet in area, and not more than two stories in height	30	0
For every additional story	5	0
For every additional square of 100 feet or fraction of such square .. .. But no fee shall exceed ten pounds.	2	6
And for every building not exceeding four hundred square feet in area, and of one story only in height, the fees shall be	15	0

Fees for Additions or Alterations.

For every addition or alteration made to any building after the roof thereof has been covered in, the fee shall be half of the fee charged in the case of a new building.		
For inspecting the arches or stone floors over or under public ways	10	0
For inspecting the formation of openings in party walls	10	0

PART II.

For inspecting dangerous structures, by direction of the Commissioners of Police or Sewers	20	0

N.B.—In this Schedule "area" shall include the area of any attached building.

COMPETITIONS.

OXFORD UNIVERSITY MUSEUM.—Architects who have sent in DESIGNS in COMPETITION for the OXFORD UNIVERSITY MUSEUM, are informed that their designs are packed up, and in the care of the Registrar of the University, by whom they will be sent, on application, to such addresses as the authors of the respective motto may have signified to "The Secretary of the Museum Delegacy, 15, St. Giles-street, Oxford." Jan. 3, 1855.

THE WATFORD CORN-EXCHANGE COMPANY are desirous of receiving DESIGNS for their intended EXCHANGE BUILDINGS and APPROACH thereto. The plans to be drawn to a uniform scale of one-eighth of an inch to the foot. The perspectives must not be coloured. The cost of the outlay not to exceed £3,000. The architect whose design shall be considered as the best will be employed to carry out the works at the usual commission of 5l. per cent. The author of the second best plan in the opinion of the provisional directors will be awarded the sum of Ten Guineas. The plans to become the property of the provisional directors. No allowance will be made whatever to any other competitor. The drawings to be sent in with the name and address of the author, and to be delivered to the Secretary, Mr. J. SEDGWICK, Solicitor, Watford, on or before the 1st FEBRUARY, 1855; from whom all necessary information may be obtained on application.

TO ARCHITECTS.

THE DIRECTORS of the BRIDGNORTH PUBLIC BUILDINGS and MARKETS COMPANY, are desirous of receiving DESIGNS and ESTIMATES for the ERECTION of PUBLIC BUILDINGS, to include accommodation for the butchers, fish, vegetable, poultry, cutlery, and other markets, a large room for lectures, and music, reading-room, and rooms for the sitting of the magistrates. A premium of £50 will be given for the most approved design, and £30 for the next best; the 2d. not to be paid for the most approved plan, if the person drawing that plan should be employed as architect to superintend the buildings. The drawings and estimates must be delivered at the Office of Mr. GORDON, Solicitor, Bridgnorth, the Secretary, on or before TEN o'clock in the FORENOON of SATURDAY, the 3rd day of FEBRUARY next, from whom a plan and section of the intended site may be obtained, together with any particulars that may be required upon payment of five shillings.

ALL Persons desirous of furnishing Proposals for HEATING the "BRUEN TESTIMONIAL CHURCH," Carlow will receive full particulars by applying by letter, prepaid, to J. M. DERICK, Esq. Architect, New Church, Carlow.

CONTRACTS.

ESTIMATES WANTED. — STIRLING POOR-HOUSE. The Parochial Board of the Parish of Stirling having resolved to erect a POOR-HOUSE, INFIRMARY, and ASYLUM, according to plans and specifications thereof, prepared by J. W. and J. Hay, of Liverpool, Architects, and approved of by the Board of Supervision, ESTIMATES for the various departments of the proposed building are required. These may either be given in, in one offer for the whole, or by the different officers for their respective departments of the work. If estimated for as a whole, then the prices for the different departments must be separately stated. Plans and specifications may be seen at the Council-room, Stirling, or at the Offices of Messrs. J. W. and J. HAY, Liverpool, on and after MONDAY, the 25th current. A competent Surveyor has measured out the quantities, copies of which may be had at the Offices of Messrs. HAY, on payment of five shillings. Sealed offers, marked "Tender for Stirling Poor-house," and addressed P. G. MORISON, Esq. Chairman of the Parochial Board, Stirling, must be lodged in or before the 24th JANUARY, 1855. The Board do not bind themselves to accept the lowest estimate. P. G. MORISON, Chairman.

Stirling, December 19, 1854.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the Dover District hereby gives Notice that sealed TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before the 15th day of JANUARY, 1855, from Persons desirous of CONTRACTING with the Honourable Board of Ordnance for the following WORKS at DOVER CASTLE, viz. FITTING UP the CLIFF CASEMATES as BARRACKS, including the Construction of Ablution Rooms, Privies, and Urinals, and the Improvement of the Ventilation Shafts. Plans and specifications of the works may be seen, and forms of Tender obtained, at the Royal Engineer Office Dover, between the hours of TEN and FOUR o'clock, from the 29th DECEMBER, 1854, to the 10th JANUARY, 1855, Sundays excepted. The party whose Tender may be accepted for the works will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of £1,000, for the due performance of the contract. Tenders for the above works to be addressed to the "Secretary to the Board of Ordnance Ordnance Office, Pall-mall, London," and endorsed "Tender for Works at Dover Castle."

N.B. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, December 13, 1854.

TO BUILDERS.

SEALED TENDERS for BUILDING BARRACKS and STABLES for Royal Artillery, to be erected at Devonport; with separate Tenders for the Asphalte Work, will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 8th JANUARY next, at Noon, addressed to the Secretary to the Board of Ordnance, and endorsed "Tender for Artillery Barracks, Devonport," on the left hand corner of the envelope. The Royal Artillery Barracks comprise a building containing six officers' quarters and servants' rooms; a range of stables with harness-rooms, artillery-stores, ablution-rooms, with internal staircases, and soldiers' rooms over the whole range; infirmary stables and yard; forage-barn for hay, straw, and corn; forge, shoeing-shed, pharmacy, and cooking-house; guard-house and cells; orderly-room and workshops; privies, dung and ash pits; enclosure-walls, gates, side-doors, roads, parade, drains, Plans, forms, and conditions, with specifications, and additional particulars, may be seen, Forms of Tender, and the necessary information obtained, at the Royal Engineer Office, Devonport, between the hours of NINE and FOUR o'clock, from TUESDAY, the 19th inst. to SATURDAY, the 30th of JANUARY next, Sundays and Christmas-day excepted.

Royal Engineer Office, Devonport, 12th Dec. 1854.

TO BUILDERS AND OTHERS.

SEALED TENDERS for the following SERVICES at Ball Point viz.—

1. Building Cottages for a Foreman and Sixteen Labourers;
2. Building a Cook-house and Wash-house for the Crews of the two Powder Vessels, with Privy and Urinal;
3. Building an Office for the Ordnance Storekeeper;
4. Building a Civil Watch-house and a Shed for Waggons;
5. Building a Warder's Lodge and a Shoe-house;
6. Building an Engine-house;
7. Building a Boat-house;
8. Making the present Wooden Filling and Examining-house at Keyham to Ball Point;

For SPECIFIC SUMS, will be received at the Ordnance Office, Pall-mall, London, on or before the 29th of JANUARY, 1855. Detailed specifications of the above eight services, and every requisite information, may be obtained at the Royal Engineer Office, Ball Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 9th JANUARY next to the 29th JANUARY, both days inclusive.

Royal Engineer Office, Devonport, 15th December, 1854.

TO BUILDERS.

TENDERS will be received by the Honourable Board of Ordnance, at their Office, Pall-mall, London, on MONDAY, the 8th of JANUARY, 1855, from such persons as may be willing to undertake the ERECTION of a GUN and CARRIAGE SHED, at Hilsea Barracks, in the county of Hants. The plans, specifications, and conditions of contract for the above works may be seen, and every information obtained, on application to Mr. KIRTON, Clerk of Works, after the 28th inst. at this Office, between the hours of TEN and FOUR o'clock (Sundays excepted). Tenders to be endorsed "Tender for the Erection of a Gun and Carriage Shed, at Hilsea Barracks, county of Hants."

Royal Engineer Office, Portsmouth, 22nd Dec 1854.

TO BUILDERS.

GLOUCESTERSHIRE FREEHOLD LAND and HOUSE SOCIETY.—The Executive Committee are prepared to receive TENDERS for ERECTING and completely finishing a block of EIGHT COTTAGES, upon the Painswick road estate, near Gloucester. Also for Two Pairs of Semi-detached Cottages on the same estate. Drawings and specifications of the above, together with the conditions of contract, and forms of Tender, may be seen at the office of the Surveyors, Messrs. MEDLAND and MARRAY, Cheltenham-street, Gloucester, on and after WEDNESDAY, JANUARY 3rd, 1855. Tenders, according to form, are to be sent in to the Surveyors' Offices, addressed to the Committee, on or before FOUR o'clock p.m. on MONDAY, JANUARY 15th, 1855. The works may be Tendered for in three separate estimates. By order of the Committee.

JAMES DAWES, Secretary.

6, King-street, Dec 29, 1854.

TO NURSERYMEN, GARDENERS, and others.—Persons desirous of giving in TENDERS for the FORMING, MAKING, and LEVELLING the WALKS and CARRIAGE DRIVES, and for the LEVELLING, DRAINING, and PLANTING the ground for the DONCASTER CEMETERY (about seven acres and a half), may see the plan and specification, at Mr. ALEXANDER'S Office, in Saint George's-gate, Doncaster, from MONDAY, the 8th, to MONDAY, the 15th day of JANUARY, 1855. The Tenders, enclosed "Tender for making the Roads and Walks, and for Levelling, Draining, and Planting the Doncaster Cemetery Ground," to be addressed under cover, to the Clerk to the Commissioners, on or before the 20th day of JANUARY, 1855.

T. B. MASON, Clerk to the Commissioners.

Town Clerk's Office, Doncaster, December 26, 1854.

CONTRACTS.

WINDSOR UNION.—To SURVEYORS and LAND VALUERS. The Board of Guardians of the Windsor Union will be ready further to treat, to hold at the BOARD-ROOM of the said Union, situate at OLD Windsor, Berks, at half-past TEN o'clock in the forenoon of TUESDAY, the 9th day of JANUARY next, to receive TENDERS from persons competent to make a PLAN and VALUATION of the MESSUAGES, LANDS, and other HEREDITAMENTS liable to POOR-RATES in the parish of Upton, Surrey, according to their annual value. A form of contracts for the due performance of the work which the person whose Tender may be accepted will be required to execute, may be seen at my Office, at Windsor, until the day preceding that fixed for the said meeting, on which day the parish contract will be finally treated for, and the Tenders opened in the presence of such Tenderers as may attend. The Board of Guardians do not pledge themselves to accept the lowest or any other Tender.

GEORGE HENRY LONG, Clerk of the Union.

Windsor, 20th December, 1854.

TO BUILDERS AND OTHERS.

CONTRACT required to FINISH FOUR CARCASES, with 3 Shops, in the neighbourhood of Dalston. Money advanced. For further particulars, apply to Mr. CHAPPELL, Auctioneer, &c. 3, Clyde-terrace, City-road.

NOTICE.—The BURIAL BOARD for the PARISH of PORTSEA are prepared to receive TENDERS for DRAINING the new BURIAL GROUND and for FORMING the ROADS, PATHS, &c. The plans and specifications may be seen at the Office of Mr. C. B. SMITH, Surveyor to the Board, No. 9, Queen-street, Portsea, on and after FRIDAY, the 29th instant, at which time Tenders may be delivered. Tenders, sealed and endorsed, Burial Ground Drainage, to be sent in on or before TWELVE o'clock on TUESDAY, the 16th day of JANUARY next. The Board do not bind themselves to accept the lowest or any TENDER.—By order of the Board,

19, St. George's-square, Portsea, Dec. 21st, 1854.

TO SCAVENGERS

MANOR of SOUTHWARK or CLINK LIBERTY.—Notice is hereby given, that the Commissioners of Sewers of the Clink Liberty, in the parish of St. Saviour, Southwark, will hold a General Meeting at their committee-room, Princes-street, Southwark, on WEDNESDAY, the 17th day of JANUARY next, at SIX o'clock in the afternoon precisely, for receiving PROPOSALS for CLEANSING the SEWERS and PUBLIC PASSAGES, and other places except the Queen-street within the said Liberty, on three alternate days in every week, and Thursday, Saturday, and Sunday, on every day of the week, except Sunday, under contract for three years, commencing the 25th day of JANUARY next with power for the Commissioners to determine the same at the end of the first or second year at their option. The proposals must be made to include all the dust and ashes, as required by the Act of Parliament of 3 & 4 Geo. IV. cap. 113, and the form of contract may be seen by applying at the office of Mr. HOWE, Surveyor to the Commissioners, Bridge-street, Southwark, or at the office of the Clerk, at which places all necessary information may be obtained. The person wishing to contract will have to execute a contract in accordance with such draught contract, and he and two sureties will also be required to execute a bond (joint and several) in the penal sum of £50, conditioned for the performance of such contract. All persons desirous of contracting, must send proposals sealed up, and endorsed "Scavengers' Contract," addressed to the Commissioners, and to be delivered at the Committee-room, Princes-street, by before SIX o'clock in the evening of the same day, and signed with Christian and surnames by two responsible persons as their sureties; and each party tendering must be in attendance at the Committee Room, at half past SIX, when the tenders will be opened. The contract will be given to the person who shall enter into such contract and bond, and give such sureties as shall be approved by the Commissioners, or any other tenderer. Dated this first day of January, 1855, by order of the Commissioners,

GEORGE HOLMES, Clerk, 91, Bridge-street Southwark.

SAINT PANCRAS BURIAL BOARD.—TO ROAD CONTRACTORS and OTHERS.—The Burial Board of the above parish are desirous of receiving TENDERS for ONE THOUSAND YARDS of GOOD COARSE SCREENED GRAVEL, for Road Making, to be delivered as may be directed, on the south side of the Cemetery, at the Finchley-road, at Five shillings per yard. Each person tendering, to send in as a specimen one load to the Cemetery, before MONDAY, the 15th instant, of the material he intends to supply, for which load the highest price as the tender selected shall specify. Tenders sealed to be sent in, addressed to the Secretary to the Burial Board, at the Vestry-hall, Old Pancras-road, Euston-road, London, on or before the 22nd of MONDAY, the 22nd JANUARY last, at which time the Board will meet to inform their decision. The Board will not be bound to accept the lowest, or any of the tenders, unless satisfied therewith.

By Order of the Board,

CHARLES GREENE, Clerk.

Burial Board Office, St. Pancras Vestry-hall, Old St. Pancras-road, Jan. 4, 1855.

CRYSTAL PALACE DECORATIVE ARTISTS' PAINTING Messrs. DIENSEN and KUCKUCK, Artists-Decorators to His Majesty the King of Hanover, and executors of the Byzantine Courts, &c. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, H & Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Rogers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Paws, and other castings, to patterns or drawings.

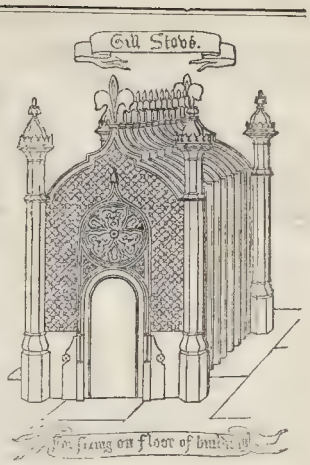
STUART AND SMITH'S

PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses.

Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

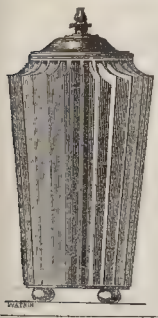
No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.



They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Stores, Warehouses, Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER

is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to SYLVESTER and CO.

Engineers, and Manufacturers of Heating Apparatus, 96, Great Russell-street, Bloomsbury.

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection, may now be seen in daily operation at F. EDWARDS and SONS', 42, Poland-street, Oxford-street. By this grate a smoky chimney is prevented, no chimney sweeping is required, and a saving of at least thirty-five per cent. is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and hot air pedestal stoves. Old grates are altered to this principle. Prospectus sent on application.

MAGNUS'S PATENT ENAMELLED SLATE CABINET-FORMED FIRE PLACE. This is deededly the most novel, elegant, economic, and comfortable fire-place that has ever been introduced to the public. It moves on castors, and stands BEFORE the opening of the chimney, projecting into the room as a regular cabinet. It is composed of fire-stone and slate, and has hot-air chambers. It may also be fitted up for gas instead of coal. By the economical, who dislike to see half the heat from the coal wasted in the chimney, and by persons of taste, who object to the stiff unpleasing chimney-piece in ordinary use, the CABINET-FORMED FIRE-PLACE has only to be seen to ensure its adoption. Price from ten guineas upwards. Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

THE ONLY STOVE WITHOUT a FLUE. JOYCE'S PATENT—Plain, from 12s. to 42s.; Ornamental from 31s. 6d. to 11 guineas.—for warming halls, passages, greenhouses, water-closets, shops, store-rooms, and all places requiring artificial warmth. To be seen in use at the sole Proprietor's, S. NASH, Ironmonger, &c. 263 Oxford-street, and at the City Depôt, 113, Newgate-street London. PATENT PREPARED FUEL for the stoves, 2s 6d. per bushel. JOYCE'S PORTABLE LAUNDRY STOVE will heat and keep hot for use six flat and Italian irons, with perfect cleanliness, for twelve hours, with one penny-worth of coke or cinders. Price 12s

*** Prospectuses, with drawings and reports, forwarded free.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office 145 Regent-street London.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark iron-bridge.

ELDRIDGE'S IMPROVED RANGES: with brick backs, ovens, and boilers. 3s in. 30 in. 32s.; 3 feet 6 in. extra strong and wrought bars, 30s.; Self-Acting Ranges, with oven and boiler, 36 in. 33s.; 42 in. 38s.; 4 feet patent Leamington Kitchener, with hot-plates, &c. 7l. 10s.; Furnace Boilers, 5d. per gallon, &c.—J. ELDRIDGE, Ironmonger, 78, Sun-street, Bishopsgate-street.

HOT AIR, GAS, VESTA, JOYCE'S STOVES.—STOVES for the economical and safe heating of halls, shops, warehouses, passages, basements, and the like, being at this season demanded, WILLIAM S. BURTON invites attention to his unrivalled assortment, adapted (one or the other) to every conceivable requirement, at prices from 10s. each to 30 guineas. His variety of register and other stoves is the largest in existence

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from all the various manufacturers all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling rooms, as well as to have some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two light) to 10l.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS devoted to the show of GENERAL FURNISHING IRONMONGERY (including cutlery, nickel and silver plated, and japanned wares, iron and brass bedsteads), so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent per post free. The money returned for every article not approved of.

39, OXFORD-STREET (corner of Newman-street); 1, 2, and 3, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and Ogee Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights, and other castings, Iron work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

THE SMOKE-CONSUMING STOVE, invented by Dr ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 97a, Holborn

HEATING by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE - Messrs. Rylands and Sons' Books, Papers, and Bank notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, Hightstreet, Manchester, March 6th, 1854.

"Messrs. Chubb and Son.

"GENTLEMEN,—We make great pleasure in communicating to you, that the large "Patent Fire-proof Safe" that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

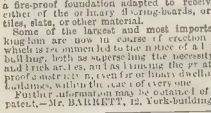
CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Plate Boxes, of all sizes; Fire-proof Safes and Chests; Iron Doors and Fronts for Strong Rooms, all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to roofs, EVERY DESCRIPTION OF BUILDING, whether private or public.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.



The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron, the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as forming the great desideratum of fire-proof construction in even the humblest dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

And every material required in the building, bell hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars Forge and Engine Work, Cast-iron for roofs, and

STEWART'S PATENT CAST IRON GAS and WATER PIPES. Office, No. 7, Bise-lane, London.

IRON ROOFS, Wrought-iron GIRDERS, Girder Bridges, Railway and Builders' Wrought-iron Work, Gasholders, Tanks, and Boilers.

CHARLES WALKER and SONS.

Midland Iron Works, Upton, Staffordshire.

Office, Little Sutton-street, London.

TO IRONMONGERS, BUILDERS, &c.

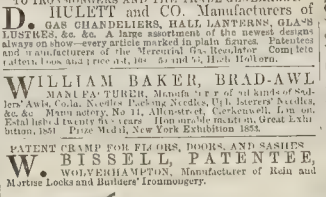
PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanised ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c. The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gasfitting, in Brass and Iron; Tap, Compression, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods. Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long acre, London.

FOR SALE by PRIVATE CONTRACT, parts of a new WROUGHT-IRON TELESCOPE GASHOLDER, intended for the London Gas works, of the following dimensions:—Inside lift, with cap, 99 feet 4 inches high, 77 feet diameter; outside lift, 97 feet high, 79 feet diameter. The parts consist of one-half the crown, of twelve segments, punched and partly riveted; the angle iron for cap and grip punched and bent, top curb punched and bent, angle iron for bottom curb punched and bent, flat bars for bottom curb bent, part of side frame 62 punched, part of bell iron for cap and grip punched and bent.—For further particulars apply to Messrs. FULLER and HORSLEY, 13, Hutters-rent City.



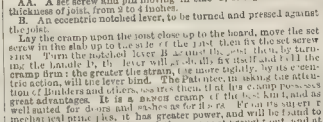
TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern book and price list, 55 and 56, High Holborn.

WILLIAM BAKER, BRAD-AWL MANUFACTURER, Manufacturer of all kinds of Saddlers' Awls, Cobblers' Awls, Needles, Packing Needles, Pegs, Lasters' Needles, &c. &c. Manufactory, No. 14, Allen-street, Clerkenwell, London. Established twenty-five years. Honourable mention, Great Exhibition, 1851. Prize Medal, New York Exhibition 1853.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES

W. BISSELL, PATENTEE, Wolverhampton, Manufacturer of Rebated and Mortise Locks and Builders' Ironmongery.



AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist then fix the set screw firm. Turn the notched lever B around the joist the by turning the handle D, the lever will act, draw itself and fill the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee is making the attractive section of Builders and others, to see them, that his cramp possesses great advantages. It is a handy cramp of the best kind, and is well suited for doors and sashes for fixing from its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

HART AND SON, IRONMONGERS AND MANUFACTURERS.

PITT'S PATENT SELF-ADJUSTING SPINDLED DOOR FURNITURE.

BELL-PULLS, LEVERS, HINGES, LOCKS, &c. 91, DRURY-LANE, and 54, 55, 56, WYCH-STREET, Strand, London.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietors own invention to defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing-mills, Cambridge-heath, Hackney. WM. HUTCHER, Proprietor.—Two Marble Masons wanted.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles received direct from the principal Quarry owners in Italy and Belgium, FOR SALE on COMMISSION ONLY, and that consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES.

Just arrived, per *Rob*, do *Tibre*, *Betty*, *Nelson*, and *Hope*, 150 Blocks of Marble, and 12,000 feet of Saw, Slab, Mortars, Vases, &c. Yorkshire and Portland Stone, Timber Deals, Pavings, &c. for Sale on consignment.—The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Lathe, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally, their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depot of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at NIAGARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

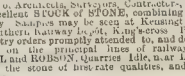
TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, crescent terrace, Millbank, to offices on the own premises, at Chelsea Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Tapp is on leave no longer.

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any other.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

TO BUILDERS, MASONS, AND OTHERS.



THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Brocatta, dove, black, black and gold, Sienna, &c. Also Statuary, serpentine, veined marble, &c. Portland, Hartwell, Park spring, and other stone, in blocks, slabs, landings, and headstone. Yorkshire paving, landings, curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

YORK STONE supplied direct from the Quarries.—NOWELL and ROBSON respectfully invite the attention of Architects, Surveyors, Contractors, Builders, &c. to their excellent STOCK of STONE, combining good colour with durability. Samples may be seen at Kensington Basin and the Great Northern Railway Depôt, King's-cross. Prices will be sent, and country orders promptly attended to, and delivered at the stations on the principal lines of railway, by addressing NOWELL and ROBSON, Quarries Idle, near Leeds. Purchasers will find the stone of first-rate qualities, and the prices very reasonable.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—TRELOELLIS and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. THATHAN, Liskeard.

This Granite is selected for the New Westminster-bridge.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES for this most durable material. A large stock kept of Mantel pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Wantz and Wharf, Cannon-row, Westminster.

GATES and GEORGE, GENERAL STONE MERCHANTS, Caen Wharf, Rotherhithe, beg to inform Whitby Manufacturers, Builders, and Warehousemen, and Wordsdale Dealers in Hearth and Burr Stone, that they can be supplied in quantities from three tons and upwards with the above, delivered at the new South Eastern Railway Goods Depôt, Deptford Basin Station, Old Kent-road, at the current price. Terms, samples, and other information may be obtained at the Office of the Wharf above.

GODSTONE STONE.—This desirable building stone can be supplied to London and its vicinity in any quantity, either of rubble or ashlar, by sea or rail, on better terms than most other stones in blocks and ashlar of specified dimensions, and fine scappled; also random and coursed rubble. It is readily worked to a good bed and face, is of beautiful colour and durable quality, as may be seen by the old buildings and churches in the neighbourhood of the quarries and counties adjoining. For information and samples apply to GATES and GEORGE, General Stone Merchants, Caen Wharf, Rotherhithe.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stones from the depôt, at current prices by land and water carriage; also by vessels direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôt, Union Wharf, East Greenwich; Lett's Watercourse, Cambridge. Offices: 246, High-street, Southwark, near the Townhall.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Batt. Stone Office, Corsham, Wilts.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawsan, beg to call the attention of Builders and others to their stock of Bangor slates, lathe, plaster, Roman, Portland, and Keene's cements, lime, lias, Dorking, and chalk lime; plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and slabs for carnage paths, ballast, sand, &c. Materials landed, wharfed, and carted.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, Middlesex Asylum, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Yooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

FINDON QUARRIES, on the Cromarty Forth, Scotland, 200 MILES N.E. These well-known and extensive Quarries will be Let on lease from January next, for such a number of years as may be agreed on. They afford an unlimited supply of a valuable and ornamental freestone, suitable for all building and engineering purposes, which has been extensively used both at home and abroad. There is a good local trade, and the Great North of Scot and Railway, now in course of construction, is in the vicinity of the quarries. No land carriage, and ships of heavy draught can load at the quarry pier. The whole is in perfect working order.—For particulars and terms apply to Mr H. SMITH, 28, Southampton-buildings, London; or to the Proprietor, L. M. MACKENZIE, Esq. Balnyl-by-Dingwall, Rossshire, N.B.

THOMAS ROBINSON AND SON,

PATENTEES FOR THE MANUFACTURE OF

BEG TO CALL THE ATTENTION OF THE BUILDING TRADE AND THE PUBLIC TO THE DIFFERENT ARTICLES THEY MANUFACTURE, ALL OF WHICH WILL BE FOUND GREATLY SUPERIOR TO ANY OF THE SAME DESCRIPTION MADE BY HAND LABOUR.

SHIPPERS SUPPLIED ON LIBERAL TERMS. PATTERN-BOOKS AND PRICES SUPPLIED ON APPLICATION.

WORKS—ROCHDALE, near MANCHESTER. LONDON WAREHOUSE, 20, VINE-STREET, WATERLOO-ROAD, LAMBETH.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 3 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

sing universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 5 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c for which purposes it is supplied in squares of all sizes, from 6 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THE DICTIONARY of ARCHITECTURE, issued by the Architectural Publication Society.—Members are requested to forward their subscriptions for the current year, 1852-53, to the Treasurer, THOMAS L. DONALDSON, Esq. Bolton-gardens, Russell-square, or to WYATT PAPWORTH, Esq. Honorary Secretary, 14a, Great Marlborough-street, who wishes to purchase from former members the works for the years 1848-9, and 1849-50.

ILLUSTRATED LONDON NEWS.—The year 1852 bids fair to be one of the most important and eventful of modern history. On the 8th of JANUARY, 1853, will be issued the first number of a new volume of the ILLUSTRATED LONDON NEWS, and not merely a new volume, but of a New Year: each volume being perfect and complete in itself, containing, for the year, a faithful record, pictorial and descriptive, of all events of interest in every part of the world. To that limited portion of the public who do not subscribe to this Journal, it may be stated, that the first number of a new volume is generally commencing,—the whole expense being but Twenty-six Shillings per annum, exclusive of double numbers, which are issued on rare occasions, at 4d. each. The Proprietors have spared no important events and Engravings into a single number; for this small sum the Subscriber will receive Twenty-four large Pages—seventy to One Columns of the most interesting information, carefully selected from the News of the Week, interspersed with a variety of charming Articles on the chief topics of the day.

The ILLUSTRATED LONDON NEWS has, by its impartial and consistent advocacy of the welfare of the Public, secured for itself a political influence somewhat second to any Newspaper in the Empire; and reference can with some pride, be made to the support afforded to all beneficial measures, proposed and adopted by the English Parliaments.

Foreign politics will ever command the attention which ought to be devoted to so important a feature of a Newspaper. On the question of the Russian War, during the year 1854, ONE THOUSAND ENGRAVINGS appeared in the ILLUSTRATED LONDON NEWS, forming an amount of information which will improve this popular Journal, and engagements, such as will greatly enrich its Literary, Scientific, and other departments, have been made, and will thus combine on this paper the greatest talent of the day.

The ILLUSTRATED LONDON NEWS has been established thirteen years, during which period it has received a greater degree of encouragement and approbation than any Journal ever published. This is proved by the returns of stamps issued from the Stamp Office, which show the Stamps supplied for the first six months of 1854, were upwards of 2,734,000—showing a WEEKLY CIRCULATION of UPWARDS of ONE HUNDRED and THIRTY THOUSAND COPIES!

Terms (for payment in advance):—Half-year, 13s. 6d.; Year, 26s.

Any of the volumes of the ILLUSTRATED LONDON NEWS, from the commencement to the present time, may now be had, in paper or cloth. Covers for binding the volumes, 2s. 6d. each.

All numbers may be sent free by post to any part of the Kingdom and the Colonies.

Give an order for six months, to ensure all the gratuitous prints and supplements, of all Booksellers and Newsmen.

The ILLUSTRATED LONDON NEWS is published in London every Saturday, Stamped, to go free by post, Sixpence per copy.

Office, 186, Strand, London.

A SUPPLEMENT, GRATIS, with the WEEKLY DISPATCH, EVERY WEEK UNTIL FURTHER NOTICE. The unexampled interest which attaches to every incident connected with the operations of the Allied Armies in the East, has determined the Proprietors of the WEEKLY DISPATCH to devote a greater space to the intelligence from the seat of war than the ordinary limits of that, the largest newspaper published, could possibly afford; and, with the view of giving the amplest details, they have resolved upon the issue of a Series of Supplements Gratis, which will include every particular of interest connected with the Siege and decision of the contest at Sebastopol, and will be continued wherever demanded by the progress of the Campaign. By the publication of these Supplements the portion of the Paper usually devoted to incidents of domestic and political importance will be reserved intact, and the engrossing subject of the War will receive the fullest and most varied illustration. A Supplement will be published on Sunday next (Gratis), and on every succeeding week until further notice.—Orders may be given to all Newsvendors in town and country; and to the publisher, at the *Dispatch* Office, 139, Fleet-street, London.

The Builder

VOLUME FOR 1855.

WE cannot select a better subject for illustration in the first number of our new volume than the noble municipal building recently inaugurated in Liverpool.

St. George's Hall stands prominently on the rising bank of the Mersey, on the north-east side, about half-a-mile from the sea. From the mouth of this famous estuary it presents an imposing mass, towering over the city; and if, as it has been suggested, on its lofty roof a golden globe were proudly affixed, glittering in the sun, it would be the first object seen by the homeward-bound, to welcome their return, while it would aptly symbolize that sphere which the indefatigable commerce of its merchant princes has subjugated to the purposes of wealth and prosperity to our whole community.

St. George's Hall is situated on a rapid declivity, covering, together with its area and approaches, about 3½ acres. The building itself, 490 feet long by 165 feet wide, occupies the western or lower side of the site, which, being raised by a magnificent sub-basement, as it were upon one vast step, correcting the natural defect of the ground by a terrace occupying the whole site, presents a very elevated and striking aspect, and seems to derive even an advantage from the accident of the declivity.

The vastness of this plan, dedicated, as the inscription declares, "to the laws, the arts, and the councils of Liverpool," is the first subject of our admiration, surpassing, as we believe, any building of the kind in Europe. Perhaps the rival in extent and regularity that best compares with it is the Bourse of Paris, which covers about one-third less: the order also of the latter is only 50 feet, that at St. Paul's is 48 feet, while that of St. George's Hall is 56 feet 6 inches.

The symmetry and beauty of the arrangement next attract our attention. The great central hall, 169 feet long by 100 feet in the entire width, including corridors leading to the several offices of the courts and town, is terminated by the Criminal and Nisi Prius Courts of Justice. At the south end is the entrance to the grand jury rooms and dependants' offices, and at the north is a magnificent entrance-hall, leading to a music-room, equal to the largest theatre, being 88 feet long by 72 feet wide. The many subordinate appendages to these leading features will speak for themselves on the plan we append.

The arrangement of the plan is a delightful contemplation to the learned architect, and displays a knowledge of all the best examples and principles of architectural science, which the labour of a life would seem necessary to bestow on the experienced veteran, and which, in the youthful author of this work, seems little short of divination.

The mediæval system of commensuration, by a modulus of 13 feet, gives uniformity and proportion to all the parts,—especially in the hall it will be found to be exactly carried out. The modulus established by the axes of the columns (13 feet) being doubled in the width or depth of the portico, reproduces an admired feature of Classical architecture, the pseudo-dipteral peristyle flank of the Grecian temple; the axes of the interior granite columns of the hall are equally two moduli, or 26 feet; the entire length and width of the hall are 13 moduli by 8 moduli.

In the south front and courts this division is dispensed with, for overruling reasons. The systyle of the flank is changed in the south front to the more appropriate picnostyle; and we have the reproduction of the front of Jupiter Stator in the Roman Forum, varied only in the entablature, which is somewhat less rich and massive.

Nothing can better display the judgment of the young architect than the variation here remarked. The pedant would have enforced his modulus throughout, but the man of genius considers that the exception often proves the rule, and time, place, and circumstance are to have their due influence in the work. The elongated systyle intercolumniation harmonizes with the elongated eastern flank, while the serried, or narrow picnostyle, best harmonized with the narrower end of the building. In so doing, he reproduced to the English eye a most admired example of classical taste; and the brightest ornament of the Roman Forum, the Temple of Jupiter Stator, is displayed in England for the first time,—a masterpiece of proportion and symmetry.

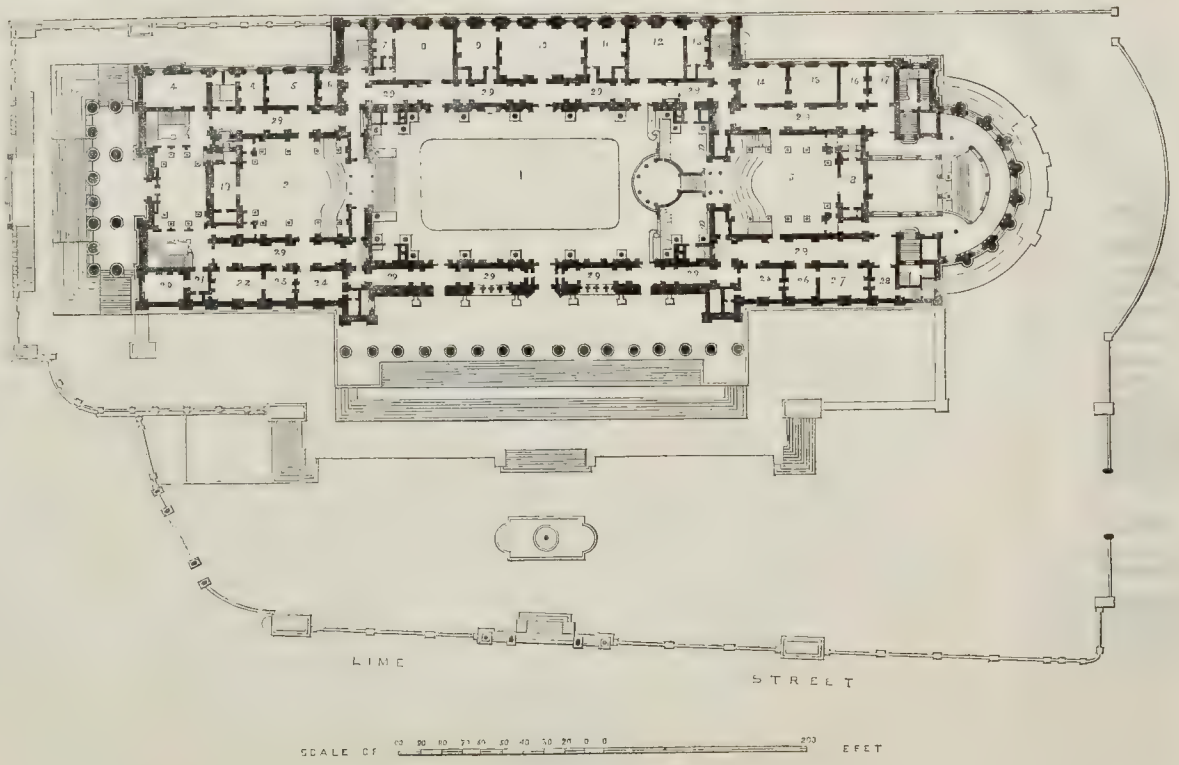
The same scientific daring is exhibited in the grand feature of the hall, in which the architect proposed to reproduce, but to surpass, the Roman Hall, that great crux to the architects of Europe during fifteen centuries, which none in this country had yet presumed to execute. In solid brick vaulting, fire-proof, enduring, and masonic, England possesses for the first time a magnificent specimen of Roman grandeur, worthy of our not less than Roman country; and the trussed roof of combustible materials, its flat and plastered ceilings, are rejected and abandoned, let us hope for ever, in our enduring monuments.

The Hall of Diocletian, the last of the Roman vaults, was 79 feet between the walls, but 64 feet only between the columns, while St. George's Hall is 1 foot more wide,—65 feet between the columns, though 74 between the walls.

The span of the vault of Caracalla is 63 feet. The pendentives rest upon Aberdeen granite columns, 31 feet high, turned and polished as no classical columns ever were.

The proportion of the hall, 169 feet by 74 feet between the walls, and 83 feet high, presents 2¼ diameters of the width; the proportion of the Roman hall is generally about 2½ diameters in length,—yet we should not desire that of St. George's Hall to be altered. The proportion of the hall, as externally viewed in its vast parallelogram of 2¼ diameters raised into the air, is exceedingly satisfactory,—the breadth and simplicity of its large surfaces, unbroken by window and door-openings, and its uniform order throughout, produce an indescribable serenity, seclusion, and nobility, in this admirable building. The proportions of the order itself, and every part of the exterior, and no less of the interior, are finely and wisely ordered, and we derive that satisfaction in the contemplation of them, which has been the grand aim of all the great concurrent masters of this occult and most desired science of proportion. The contrast of the square parastas, or isolated pilaster, in the flank porticos, is new and admirable, as harmonizing with the work in which they are inserted, and relieving by their angular forms that monotony and satiety which the repetition of the column in the central portico might so easily have produced on the spectator.

Harvey Lonsdale Elmes was the author of this very remarkable work. At the age of twenty-three he obtained the premium in a large competition of the profession for the building of St. George's Hall, at first intended as a music-hall only. A competition for the building of the Assize Courts, in which he also gained the first premium, shortly succeeding, enabled him again to display his pre-eminent ability at the age of twenty-four. In the following year the two buildings, St. George's Hall and the Assize Courts, were incorporated, according to their actual form. The foundation stone was laid on the 28th June, 1838, and the work was actively prosecuted from 1841 till 1843, when, exhausted by these labours, and by the encroachments of a fatal malady, he sought the milder climate of Jamaica, in the vain hope of recovery; and there his brief career was terminated at the age of thirty-four.



A delicate fibre, which enabled him to touch the violin like a professor, and design, with no less grace and mastery, a scientific and tasteful structure, involving so much conception, daring, and originality, was too subtle for the rude contact of such a world as ours; and his brief career, like that of a meteor, in his arduous profession will probably be memorable in the biography of architects. This title to distinction is further recommended by every honourable characteristic and moral exercise of his high gifts and privileges. Too soon removed from the means of reward and provision for his successors, he has left a young and accomplished widow and an only boy, with no other heritage than his renown and the obligations he has unquestionably conferred by his genius on the people of Liverpool, which there is every reason to hope they will acknowledge as a sacred duty. His short and brilliant life has conferred upon Liverpool a renown as enduring as the Aberdeen granite and the Darley Dale stone, which compose its massive walls, and his name will be associated with that of Roscoe and others, amongst the provincial glories of Liverpool; for though born and bred in London, his entire professional life, from the age of twenty-three, was spent in illustrating this great and spirited commercial emporium.

If the beasts of burden which drew the Pentelic marble of the Parthenon to its final resting-place, were honoured and preserved in green pastures for the remainder of their days by the Athenian gratitude, how much more sensibly will this duty be felt by the liberal and Christian population of Liverpool, and so to see the widow and orphan of their benefactor decently provided for and sustained in the social rank to which they have so distinct a title.

Since the year 1847, Mr. Cockerell has more or less directed the finishing of this important work. The pediment, from his design and under his superintendence, had already been

GROUND PLAN OF ST. GEORGE'S HALL, LIVERPOOL.

in hand since 1845. The symbolism is trite, as such compositions should always be, as addressed to the common observer. Britannia armed, her lion by her side, and seated on a rock, holds in her left the olive-branch, and in her right the spear. She hails the four quarters of the globe, presented to her by Mercury; the last of whom, Africa, inclines with the form of the pediment, and, with her negro children, acknowledges her obligations to the queen of freedom, who laboured so long and successfully for their emancipation: beyond are the vine and foreign productions. To her right, Agriculture and the Arts, seated in a car, represent England and her productions; the husbandman and his plough, his wife with the distaff and her child, express industry, manufacture, and domesticity, the glory of our land; at the end are labourers at the anvil, the anchor, and the arms of mail, which, when occasion offers, she can so well use. But it is in the linear composition that we derive the benefit of those studies in Greece which this gentleman is known to have prosecuted. The number and size of the figures, and their diagonal positions, are conformable to the acknowledged principles of contrast set forth in a paper by Professor Cockerell, reported in the last volume of this journal, at p. 457. But it is in the arrangement of the centre dividing this obnoxious height, commonly so destructive of due relation with the other figures of the pediment, that he has succeeded, for by placing the ocean or Mersey at the feet of Britannia, the same dimension of figure is carried throughout harmoniously, and with the best effect of lines.

In 1848 his design for the terrace and steps under the south portico was adopted, together with the scheme for the approaches, not yet entirely carried out. The elaborate finishings of the interior have been designed by this gentleman, and very arduous and responsible, no doubt, has it been felt, to handle a framework so nobly designed; and great might well be the apprehension that its grace and nobility might suffer under any hands short of that of the original master himself. The ceiling, according to the apparent system of the Romans, is covered, like a firmament, with a multitude of appropriate detail to give space and magnitude to the whole. The provincial armorial bearings and the symbols appropriate to navigation, and the municipal and legal purposes of the structure, have been largely employed. These have been circumscribed to the crowns of the side-groining arches, and not carried down to the springing of the arched vault, as is commonly the case. The whole proportion is thereby heightened, and the parallelogram of the ceiling materially elongated. The six pendentives are adorned with symbolical figures, taken from Raffaelle's compositions in the Vatican, of Temperance, Prudence, Art, Science, Justice, and Fortitude, and in the paving under these are inscriptions illustrative of each of these virtues. A rich decoration of galleries, composed of Irish black marble, Derbyshire spar ballusters, and twenty-four Irish green niches adorn the lower part of the hall, the walls being decorated with slabs of various British marbles. Two of these niches are already occupied by illustrious tenants, Sir R. Peel and George Stevenson. The six doors are very magnificent, and surpass anything of the sort yet executed in England. The jambs are in solid grey granite, in single pieces, with cornices carved in Portland stone; the gates themselves are of bronze and brass, highly elaborated. Above these are ten chandeliers, of great magnificence in size, materials, and design; they are 7 feet diameter, with 140 lights each, in the form of stars. The paving, executed by Minton, after designs by Mr. Cockerell, Mr. Gruner, and Mr. Stevens, is unexampled in tesselated workmanship. The drawing of the Tritons and Sea-nymphs, in red and yellow, is highly classical, spirited, and beautiful.

A regulation of some interest in the direction of this structure has been vigorously observed in every detail, namely, that none but British materials and British workmanship should enter into the work.

The organ, an instrument of great compass and magnificence, has long been a vexed question, as impairing the perspective of the Hall and Nisi Prius Court; and its position in this regard must ever be lamented: but after extended deliberation, and the best advice, on acoustics and musical convenience, it was finally decided to be placed at the north end of the Hall. Pains have been taken by its form and structure, to play into the lines and perspective and uses of that part of the hall.

The area in the east front, together with the niches in the hall, afford space and position for all the illustrious of our land, and will furnish, in the growth of time, a museum of art and of renown, of the utmost historical interest.

We give a view of the interior (p. 7), and shall have occasion to return to the subject.*

A CRITICAL REVIEW OF ST. GEORGE'S HALL AND THE ASSIZE COURTS, LIVERPOOL.

AN example of classical architecture, fairly subdued to our service, and applied to our purposes, and thus made a creature, as it were, of the day and country, is a rarity at the present time, though it is the application of the ancient architecture that common sense dictates, and the only one that men who use their mental faculties, and intellectually and really live in England, and the nineteenth century, could make; for when climate, or some important circumstance differs with every parallel of latitude, and every meridian of longitude, and when change comes in with every generation of mankind, what age, what nation, can furnish us with a design, or do more than give us hints, teach us principles, or yield us elements? And even as regards these, life with us being neither Roman, nor Greek, nor Italian, our social system being more complicated, and its exigencies more multifarious than that of any ancient one, we must not adopt Italian only, nor Greek only, nor Roman only, but all of them: we want the warm and picturesque of Italy, the cool, and chaste, and solemn of Greece, and all intermediate qualities. If I adopt Greek only, or Italian only, I soon find that I have not a sufficient range,—it takes them all to give body to the great spirit of modern architecture, and compose a system sufficiently copious for the present day.

Italian architecture seems to be generally conceived of as a thing quite distinct from the antique, as if with the Greek it had no relation whatever; but pure Italian architecture *is* Greek architecture, heaved up again by the wave of time, fitted for the resumption of its ancient career in the fulfilment of purposes additional to those it was applied to by its inventors. And the architect who adopts the classical architecture has a right to avail himself of the purer elements of the Italian style, which, had its framers never existed, would in the working out of a modern system from the antique ordonnance, naturally have arisen to the inventive mind.

Rightly to use the columnar architecture of the Greeks, the architect must, therefore, conceive his design in the pure spirit that created it, and maintain that spirit when he is working upon ground that is peculiarly modern, and dealing with forms required by a new mode of life, and for which antiquity furnishes no precedent. Full limited is the sphere of ancient art, but in pursuing paths beyond its range, opened up by modern wants, his course must frequently run so parallel with the art of ancient Rome and modern Italy, that he may avail himself of their suggestive aid, and borrow or make an enlightened adoption of many of their elements, while he takes care to avoid the contamination of their vices, and also to test all knowledge from their reflected lights by the great and primary luminary of all nature herself.

An illustration of something like this is, I think, to be found in St. George's Hall, which is an application of classical architecture to the service of the day, evincing more than the usual freedom and breadth of mind in its author, who, though he has not for his ornamentation drawn upon the nature around him as directly and freely as she may be and *will* be (for classic architecture has its career yet to run in England); though he has not proved how beautifully and harmoniously such ornamentation will blend and unite with antique constructive forms; yet evidently went back to the fountain-head of art-elements, surveyed the whole stream, and feeling himself a master, used the materials he drew from it with authority. Adopting a columnar ordinance of Greek purity as the general framework of his design, he has not refused to let it embrace and draw into itself whatever had a natural affinity for it, or was capable of being brought into it in the crucible of art, no matter whence derived; and by so working has done much towards proving the strangely disputed power of vital development to meet the growing exigencies of the world, inherent in the style: for St. George's Hall, while it exhibits some of the finer qualities and properties of the ancient system, while it presents the style in its pristine purity, free from Roman and other vices of design, yet unfolds to us something of its breadth and power, its richness and vastness of resource, and stands forth a material and enduring contradiction, echoed from plinth to cornice, from column to pilaster, to those traducers of the style who declare it to cramp invention and render plagiarism a necessity.

With these elements its architect has given an appropriate character to the edifice, and avoided the reproach that attaches too well to the general practice of the day, which, reversing Shakspeare, erects *gorgeous temples* and *solemn palaces;* and the merit of this is enhanced in our estimation by a recollection of the distracting circumstances under which he had to work: I allude to the destination of the building to contain apartments devoted to two different and conflicting purposes, causing difficulties if not impossibilities which no architect should be called upon to contend with. Simplicity and singleness of purpose are essential to a great architectural conception, and to a high class work of art, a high and poetic one. A building intended, as was St. George's Hall, to rank among our national monuments of architecture, should have been for one purpose, and that of the most elevated and poetic nature that the town and times demanded; and I think it matter for regret, that leaving law and justice to seek quarters more befitting their matter-of-fact character, the building in question was not devoted exclusively to the muses, and made a worthy abode not for one but all the fine arts, in which painting, sculpture, and architecture might hold their exhibitions, and literature its meetings; for why should one art be so much distinguished above the rest? What right has music to this high and solitary enthronement? The sweet science, however, has perhaps not so much to boast of, for it was assuredly never more unpleasantly associated, raised, as the hall is, over the cells of the condemned, and the view into the courts, so much contended for as an artistic advantage, revealing a place where men are tried for their lives.

By the employment of a suitable order, properly treated in all its details, an appropriate expression is given to the exterior, which is at the same time a true exponent of the interior arrangement or plan; for while the one great chamber, the music-hall, has full voice in the external symphony, the law courts, and small surrounding apartments, have sufficient artistic utterance; and it is worthy of remark, that the central attic order, with its delicately inclined roof, that forms the unique crown to the build-

* With reference to the notice of a paper and discussion on St. George's Hall, read by Mr. Huggins, at the Liverpool Architectural Society, and which appeared in our journal (vol. xii. p. 63) and in one of the local papers, Mr. Huggins has written to us to deny its correctness. It was sent to us in such a way as to prevent us doubting its accuracy at the time it was inserted. We have also received an indignant letter from "The Father of the Architect:" it is rendered to some extent unnecessary by the denial; but there are some portions of it for which we shall endeavour to find a place. We now print the paper itself.

ng externally, and raises it into beautiful composition, is not a merely expletive feature put on for outward effect, but one that, in containing the vaulted ceiling of the great hall, while it supplies a practical exigency of the interior, meets at the same time an æsthetic demand of the exterior.

Without following too closely any celebrated type, or recombining common-place and hackneyed features, the exterior composition of St. George's Hall exhibits much artistic geniality in its conception. With front planes of sufficient elevation for nobleness of aspect, it is yet gracefully pyramidical in general outline, each façade showing, for the most part, in addition to the front ones, two other ranks of vertical planes; and the manner in which this general form of composition, so entirely in keeping with the nature and the style of the architecture, is preserved at the back by the insulated screen of semi-detached pilasters forming what may perhaps be termed a hypæthral loggia, though such an expenditure of material for mere effect would not be justifiable in a lower class building, is, I think, here worthy of admiration. In a domestic building we should be content with the irregular or merely picturesque form that its essential parts assume; but in a monumental work, the contrivance alluded to, instinct as it is with a vernal freshness of idea, is a worthy sacrifice to the great and solemn character that must be preserved.

The absence of uniformity between the north and south ends, which has been objected to, is to be defended in the first place on the ground of its increasing an element of beauty in the building—variety, which should not be sacrificed to a beauty that can only be appreciated on paper, in contemplation of the ground-plan. By the existing disposition, the spectator of the south-east view has, on arriving at Shaw's brow in his perambulation of the building, a new aspect presented to him by the circular end. While at either end he cannot see that the other is different; at least, there is no point of view from which the difference between the two ends can give offence. It is to be defended in the second place, on the ground of its being dictated by the arrangement of the interior, where the provision of a concert-room renders the north end entirely different to the south. This breach of uniformity might be a valid objection in a church or other building, where there is but one great apartment, the influence of which is naturally allowed to arrange apartments so small and insignificant as vestry or robing-room, in complete symmetry around it; but where, beside the great room, an uneven number of smaller ones, or any number of unequal ones, is called for, the whole is naturally thrown out of symmetry, and an irregular exterior disposition is suggested, so that the difference between the facades is a departure in the right direction from the beaten and monotonous track. How far it is such will be apparent to any one who has felt the wearisome sameness of our revenue buildings, whose two extreme porticoes, though they can never be seen together, and though they are entrances to parts of the edifice totally different in plan, are *facsimiles* of each other, and, taken with the centre one, as alike as so many peas.

Nevertheless, I must respectfully dissent from Mr. Fergusson on this subject, who, in his "Historical Inquiry into the Principles of Beauty in Art," considers irregularity to be a characteristic of all great buildings. I believe, that where the purpose of a building is such that it can consistently be perfectly symmetrical within, so that a line drawn through the centre would divide it into equal and like halves, it should be so without, and that it would be in consequence a more perfect building.

The real defect of the north end, for it has a defect, is not in its want of uniformity to the south, but in its having columns applied in a manner inconsistent with the spirit of the style, to the formation of a pseudo portico, instead of a real one, which, if, in consideration of interior exigencies, or of its facing the north, where the beauty produced by the varying light and shade could not be had, it was deemed inadvisable to have, still the circular end had been more properly relieved by attached pilasters of the usual projection, which would have given more repose to that part of the edifice.

It is to be questioned, however, whether the circle should have been so introduced in the plan at all in a building terminated above by a square form which the round end must render less pleasing and harmonious as a crowning feature than it otherwise would be.

It is not ultra-classicism, but false classicism that would cavil at the insular pilasters, in adopting which, the architect obeyed laws which, though not dreamt of in the philosophy of all, are yet quite legitimate. As a column is simply a round post raised from its low estate of mere utility to shine a sun-bright glory in the realm of art, so is the insular pilaster pervaded by the new spirit of the beautiful a glorification of the square one, which nobody objects to in its primitive condition. As they (the square columns) stand before us in St. George's Hall, they contribute largely to repose, while it is to their introduction that the building is chiefly indebted for the perfect unity between the porticoes and the masses which flank them on either side. Without pilasters of some kind, to prolong, as it were, the tones of the portico colonnade along the wings of a façade, no portico will properly blend with a building: the walls must have pilasters attached or detached, and I think the building under notice proves that the latter are more effectual in accomplishing this difficult object. The insular pilaster stands in respect of geometrical form and character between the wall-pilaster and the detached column; and it is this peculiarity, along with the continuance of the entablature entirely around the building, that gives St. George's Hall its singular unity of composition.

Reviewers of St. George's Hall, like most critics of art, who but seldom rise to the contemplation of the subject as a whole, have bestowed the staple of their praise on the graceful forms and proportions of the east and south porticoes, and said but little about the other elements composing the façades. But these porticoes might be all that their greatest admirers have pronounced them to be, and yet the building be an abortion as a work of art. The south one might be the front, and the east one the side of some Greek peripteral temple cut to pieces for the purpose, and stuck on in the approved manner to a lifeless body. The great characteristic merit of St. George's Hall lies not in the well-combined arrangement of the symmetrical parts of these porticoes, but in the perfection with which each, and especially the eastern one, unites with the trunk of the building, and makes harmony with the flanking wings; and this unity, in which I consider St. George's Hall is unrivalled by any modern building, is mainly owing to the features and peculiarities in question, namely, the semi-attached pilasters and their intercolumnar walls, which latter contribute much to the repose, and save the façades from the monotony apt to be attendant on the peripteral disposition.

So far from the south portico being the chief beauty of the edifice, I believe, if that and the north pseudo-portico had been omitted, and St. George's Hall had consisted alone of the eastern colonnade and flanking wings of insular pilasters, possessing, as it then would, greater simplicity of form,—a form but one remove, instead of two, from the Greek temple,—it would have been a more perfect building than at present, though as it is, I deem it one of the finest pieces of exterior architecture in the world.

Though the general arrangement and treatment of the classic features and elements just noticed are original and excellent, resulting in an attic refinement and grace that is above all praise, there is yet one quality which I would wish to see more abundant in the building, namely, repose, the needful degree of which it appears to me that the extreme wings or mural masses with their engaged pilasters, along with the dwarf intercolumnar walls, are insufficient to produce.* S. H.

MR. EDWARD PRENTIS.—Mr. Edward Prentis, an artist who made English domestic life a chief study, has recently died, in his 57th year, leaving a wife and no less than eleven children to lament his loss.

* To be continued.

EDWARD JAMES WILLSON,
ARCHITECT, F.S.A.

Born in Lincoln, June 21, 1787; died in the same city Sept 8, 1854; and buried at Bunton, near Lincoln, with his parents.

THE name and literary qualifications of the above gentleman must be well known to those architects of the modern school who have studied and had occasion to design any recent works in imitation of, or based on the principles of the miscalled "*Gothic* Architecture" of the mediæval age. It has frequently appeared publicly; first, in the account of Lincolnshire, part of the "Beauties of England;" next, in the "Architectural Antiquities;" afterwards in the "Cathedral Antiquities;" and, more specifically, in Pugin's "Specimens," and in "Examples" of Gothic Architecture. In these different works may be seen many writings from his pen, all manifesting intimate acquaintance with the Christian architecture and archæology of England. They allude to and serve to show the history, design, science, and what may be called taste, as inherent and displayed in ancient buildings, with their ornaments and appendages: in furniture, costume, and other objects belonging to the manners and customs of our ancestors. From many years' intimacy,—from a correspondence embracing more than five hundred letters on topographical and archæological subjects,—and from the examination of much manuscript for and proofs from the press, I am enabled to speak confidently and securely on the acquirements and mental qualifications of my esteemed friend. When in his teens, and working for his father, who was a respectable builder in Lincoln, I met him in the cathedral of his native city, where he was occupied in carving some of the fine stall work, which first awakened his young fancy and admiration for that species of beauty. I found him not only well informed on the history of the august edifice, which had become at once a school-house for study, and a seducing reward to his heart and intellect. I spent two or three happy days in viewing the antiquities of that extraordinary city, where Anglo-Roman, Saxon, and other antiquities of later ages abounded. I secured his company and exciting conversation, in visits to the very curious and interesting church of Stow, the seat of the Saxon bishops of the see; to Tattershal Castle, the most remarkable mansion-fortress of the kind in England; to Boston, where a gorgeous parish church and land-mark tower are to be seen; to Thornton Abbey, once a vast building, now a picturesque ruin, and to several other places. These journeys and this association became eminently beneficial both to the young topographer and his younger pupil, for both were inquiring, and incited to study, think, and act. The latter first employed his inexperienced pen in writing accounts of these and other antiquities for the "Beauties of England," which the former revised for the press. A friendship was cemented for life between the two, and whilst the professional author was actively and diligently occupied in writing for, and publishing "The Architectural Antiquities of Great Britain," "The Cathedral Antiquities," and "The Picturesque Antiquities of English Cities," the Lincoln architect (for Mr. Willson became qualified to act in that branch of art soon after the decease of his parent) continued to furnish papers and detailed drawings for each of the publications above announced. On all occasions, I may be allowed to state, that his communications were duly acknowledged, and the writer was paid for his labours and expenses. For my unfortunate work, "The Dictionary of Architecture and Archæology," he rendered occasional aid, and was thanked, with other correspondents and friends; but made up as that was, from numerous sources, I could not easily identify and particularise each and every one. I must, however, assert, that in the said dictionary, and all other substantial publications, I have been more than commonly scrupulous in clearly and fully acknowledging every quotation and every source, whence authentic information has been derived. I wish it were in my power to say the same of many writers who have copied from and profited by my labours and exertions, and from my pecuniary sacrifices.

From what has been said of Mr. Willson's

devotion to, and knowledge of antiquities generally, and especially of those connected with the "olden times," particularly churches, abbeys, castles, and mansions; and coming under the names of Ancient Christian, Castellated, and Domestic Architecture, it may be reasonably inferred that he was a "lover of books," a diligent student, a "bibliomaniac." He was all these, and had filled his house—mostly through my agency and mediation—with tomes of all sizes and of all ages. Since his decease, a sale for two days has been devoted to these literary treasures, and from the catalogue, we are informed that his readings extended over nearly the whole field of literature, and comprehended not merely archæology and architecture, but all departments of learning, science, and the fine arts.

Having thus shown the early career of Mr. Willson in the study and elucidation of architectural antiquities, it will be expedient to bring under notice the publications in which he was more directly concerned, and from which his knowledge and opinions may be more especially ascertained. There were two different works, which appeared before the public, and are recognised in book catalogues as "Pugin's Specimens of Gothic Architecture," 2 vols. 4to. 1820-25, and "Pugin's Examples of Gothic Architecture," 2 vols. 4to. 1826. The first of these works was the joint property of, and published by Josiah Taylor, A. Pugin, and J. Britton. As stated in my "Auto-biography," Vol. II. p. 150, I had engaged to "write parts of the work, advise as to drawings and engravings, and conduct the business details of printing, publishing, and examining the proof-sheets of the literary matter contributed by Mr. Willson." I declined to place my name in the title-page, or in any other part of this work, as my engagements with partners in the "Architectural and Cathedral" volumes, required nearly every working moment of time; but pleased with the illustrations, and believing that Mr. Willson would relieve me from all literary labour, and that a small portion of time would enable me to manage other duties, I speculated on a share of expenses, profits, and labours. The last, however, surpassed all anticipations, and I soon found that nearly the whole business department devolved on me, for the artist had not, at that time, any knowledge of its routine and details; and Mr. Willson, like myself, was often incapable of working from severe head-aches to which he was subjected. The titles, dedications, prefaces, indexes, and other writings were by myself, and also some of the description and historical matter. The drawings were all made by Mr. Pugin's pupils, and were mostly executed with labour and skill; whilst the literary matter, by Mr. Willson, was replete with sound judgment and discretion, and its historical and descriptive details at once judicious and discriminative. The introductory pages to the two volumes on "Gothic Architecture," and on "Modern Imitations," display an intimate familiarity with previous architectural publications and criticisms, and also with existing buildings in different parts of the country. In this work Mr. Willson brought forward the first "Glossary of Technical Terms descriptive of Gothic Architecture" which had been published. This portion attained a third edition in 1825, and was intended by the author to be a nucleus for a more copious and comprehensive publication on the same subject. On completing my fifth volume of "Architectural Antiquities," I introduced a copious list of architects of the Middle Ages, and also "An Architectural Dictionary, or Glossary of Terms," used by the older writers on that subject. This was finished in 1826; and in 1835 I produced a large volume in royal octavo, of more than 500 pages, closely printed, and with forty plates by J. Le Keux, with the title of "A Dictionary of the Architecture and Archæology of the Middle Ages." Of this work only a small number of copies was printed, and it is now very rarely to be seen in a bookseller's shop. An account of the manner in which I was finessed out of this property, is printed in the "Auto-biography," already referred to.

The "Specimens" proving to be a profitable and popular publication, induced the artist to furnish another series of drawings, on a small scale for "The Public Buildings of London," a work in two volumes, octavo, the management and writing for which I engaged to perform, as also another, in one large volume, quarto, on "The Architectural Antiquities of Normandy." In the progress of these publications the draughtsman and his friend the engraver, Mr. Le Keux, became involved in the meshes of a law net, which was thrown by the first over, and entangled the author in tantalizing litigation. A separation took place, and Mr. Pugin commenced his "Examples of Gothic Architecture," on his own responsibility and under the advice and authorship of Mr. Willson. This gentleman wrote the whole, extending to two quarto volumes; and during its progress, Mr. Pugin died, and the work was finished in the year 1836, by his executors, A. W. Pugin and Thos. L. Walker. The last gentleman afterwards published a third volume, in continuation of, and with the title of "Examples," whilst the other executor, the son of A. Pugin, wrote, etched, and published several other works on architecture, in which he produced many curious and clever designs, as well as essays and criticisms. The former exhibited much knowledge of the designs and details of buildings and monuments of the Middle Ages. Having become an inveterate Roman Catholic, after the decease of his parents, he poured forth invectives and many anathemas against Protestant architects and their works, and thereby provoked much enmity and ill feeling. How contrary to the character and principles of Mr. Willson, who proclaimed peace and goodwill to all sects, and never printed an angry word against any of his professional brethren. Yet he was born of Roman Catholic parents—professed and vindicated their tenets and practices—and believed they were the only true and genuine Christians. On this subject he and I had two or three little wordy battles, but I conditioned, at the onset, that we should fight with muffled gloves, and not hurt each other, mentally or physically, or even ruffle the smooth waters of temper.

Though Mr. Willson was not legally drilled and disciplined in an architect's office, he was schooled in the technicalities of practice in the workshop, and in the constructive science of building in his parent's business, and in studying the manifold details of the famed Minster, which was almost daily before his eye. These opportunities gave him more insight into the principles of design and construction than many students in architecture have obtained after five or seven years' attendance in some fashionable metropolitan studios. He was very early honoured by the friendly notice and patronage of the dean, his neighbour, and of Archdeacon Bayley, who recommended him to direct certain works in the Minster, and in country churches and clerical houses. Thus favoured, the magistrates of Lincolnshire, appointed him architect and surveyor to the county, an office he held for more than twenty years. That the regular clergy of the cathedral and the corporation of the city were friendly to him, is manifested by the circumstance of granting him free access to, and the use of, their respective archives and manuscript collections, from which he extracted a large mass of valuable materials for the history of the cathedral, and the topography of the city. This collection is possessed by his two sons, the executors of his will. It is hoped, however, that it may be purchased for, and deposited in, the city to which it legitimately belongs, and thereby be rendered available for the use of any future historians, topographers, and antiquaries. At the meeting of the Archæological Institute in Lincoln, in 1848, Mr. Willson's local knowledge, urbanity of manners, and valuable collections, were duly recognised and acknowledged by the council of that society, and proved very interesting to the inhabitants of the city, and to its visitors. I can never forget the cordial courtesies, and continued devotion of the Marquis of Northampton, nor the zealous and animated conduct of the scientific Bishop who then gave daily attendance to the memorable gathering of antiquaries. They animated and cheered every member and visitor, and gave an air of amenity and heartiness which never was surpassed, and perhaps may never occur again. The loss of those eminent and illustrious personages was painfully felt by all who knew them, for they were peculiarly qualified to preside at, and impart unanimity, harmony, and true friendliness to public assemblies.

On a careful retrospect of Mr. Willson's printed writings, and a long series of correspondence, by the evidence of some personal intercourse, and the testimony of familiar friends, I am justified in believing and asserting, that he was a sincere and confirmed Christian, a good and exemplary son, husband, and father, and very extensively informed, and even learned in the architecture and archæology of the mediæval age; whence he is entitled to the high praise of Pope, who proclaims,—"An honest man the noblest work of God."

Dec. 25, 1854. JOHN BRITTON.

LABOUR, CAPITAL, AND SKILL.*

KNOWLEDGE is power, we all know or believe. Charles Knight has just written a book to show us in how many ways this is true; for, according to the remark of Rousseau which he quotes, "it requires a great deal of philosophy to observe once what is seen every day." The book is a pleasant, nay, a valuable one, without pretending to tell us anything very new in point of fact, or propound anything very fresh in point of theory, but it has the interest and the charm of Charles Knight's best style and happiest mood. Like "Once upon a Time," and "The Old Printer and the Modern Press," in their own walk, both already mentioned by us, the book before us contains a large amount of information in a compact form, bearing upon the history of industrial effort, related with delightful ease, and intermixed with those curious, out-of-the-way scraps of lore which the author's copious antiquarian knowledge supplies. Altogether, a zest is lent to the subject, which makes the book charming. The volume is founded, we are told in the preface, upon two little works which the author wrote more than twenty years ago, and which were widely circulated. One of these books, "The Results of Machinery," was published in connection with the Society for the Diffusion of Useful Knowledge, at a period of great national alarm, when a blind rage against a power supposed to interfere with the claims of labour was generally prevalent, and led, in the southern agricultural districts especially, to many acts of daring violence. Happily that spirit is lessened. The spirit of knowledge has arisen; and we are told now, by an unquestionable authority, that labourers themselves begin to regard the tedious work of the flail as too irksome,—the same class that, in 1830, broke the thrashing-machines. In remodelling that portion of the volume, it has not been necessary to deprecate the evils of hostility to machinery, but rather to look forward to its more complete union with skilled labour, as the triumph of the productive forces of modern society. In the other little book upon which the volume is based, "Capital and Labour," the general subject of the *production* of wealth was popularly treated, and the argument is in this one carried forward. The writer has further endeavoured not to overlook the general relations of capital and labour in the *distribution* of wealth. As the mistakes about production have yielded in a great degree to improved education, so may those that belong to distribution also yield to the progress of knowledge. These are not mistakes which are confined to one class, and that the most numerous. The freedom of industry has as much claim to be regarded as the security of capital. In proof that these principles are better understood in another country, the author appeals to Mr. Whitworth's special Report on the Results obtained in the United States, a document from which we lately gave some extracts in our columns. Mr. Knight further remarks, that without attempting to give his volume the formal shape of a treatise on political economy, it is his wish to convey the broad parts of his subject in a somewhat desultory manner, but one which is not altogether devoid of logical arrangement. He

* Knowledge is Power: a View of the Productive Forces of Modern Society, and the Results of Labour, Capital, and Skill. By Charles Knight. Murray.

desires especially to be understood by the *young*: for upon their right appreciation of the principles which govern society will depend much of the security and happiness of our own and the coming time. As he very significantly observes,—"*The danger of our present period of transition is, that theory should expect too much, and that practice should do too little, in the amelioration of the condition of the people.*"

It is alike beyond our space and our purpose to follow the author into the chapters of consecutive argument on the questions mooted on such topics as we have indicated. To do that justice the work must be taken up. We shall be content to pick out, from the chapters relating to those matters which are of peculiar importance to our readers, some semi-anecdotical, semi-historical, memoranda.

On the common interest of Capital and Labour, we may say, with the old proverb,—

"That 'When two men ride on one horse, one man must ride behind.' Capital and Labour are, as we think, destined to perform a journey together to the end of time. We have shown how they proceed on this journey. We have shown that, although Labour is the parent of all wealth, its struggles for the conversion of the rude supplies of nature into objects of utility are most feeble in their effects till they are assisted by accumulation. Before the joint interests of Labour and Capital were at all understood, they kept separate: when they only began to be understood, as we shall show, they were constantly pulling different ways, instead of giving a 'long pull, a strong pull, and a pull altogether;' and even now, when these interests in many respects are still imperfectly understood, they occasionally quarrel about the conditions upon which they will continue to travel in company. In the very outset of the journey, Labour, doubtless, took the lead. In the dim morning of society Labour was up and stirring before Capital was awake. Labour did not then ride: he travelled slowly on foot through very dirty ways. Capital, at length, as slowly followed after, through the same mire, but at a humble distance from his parent. But when Capital grew into strength, he saw that there were quicker and more agreeable modes of travelling for both than Labour had found out. He procured that fleet and untiring horse Exchange; and when he proposed to Labour that they should mount together, he claimed the right, and kept it, for their mutual benefit, of taking the direction of the horse. For this reason, as it appears to us, we are called upon to assign to one of the companions, according to the practice of the old Knights Templars, the privilege of sitting before the other—holding the reins, indeed, but in all respects having a community of interests, and an equality of duties, as well as rights, with his fellow-traveller."

The possessions and household furnishings of the different classes in England, at different epochs, is not only a curious subject, but a correct appreciation of it is absolutely necessary to any satisfactory review of our own national history. We have a specimen taken from the ancient city of Colchester, at the close of the thirteenth century:—

"The whole stock of a carpenter's tools was valued at one shilling. They altogether consisted of two broad axes, an adze, a square, and a navegor or spoke-shave. Rough work must the carpenter have been able to perform with these humble instruments; but then let it be remembered that there was little capital to pay him for finer work, and that very little fine work was consequently required. The three hundred and ninety housekeepers of Colchester then lived in mud huts, with a rough door and no chimney. Harrison, speaking of the manners of a century later than the period we are describing, says, 'There were very few chimneys even in capital towns: the fire was laid to the wall, and the smoke issued out at the roof, or door, or window. The houses were wattled, and plastered over with clay; and all the furniture and utensils were of wood. The people slept on straw pallets, with a log of wood for a pillow.' When this old historian wrote, he mentions the erection of chimneys as a modern luxury. We had improved little upon our Anglo-Saxon ancestors in the article of chimneys. In their time, Alcuin, an abbot who had ten thousand vassals, writes to the emperor at Rome that he preferred living in his smoky house to visiting the palaces of Italy. This was in the ninth century. Five hundred years had made little difference in the chimneys of Colchester. The nobility had hangings against the walls to keep out the wind, which crept in through the crevices which the builder's bungling art had left: the middle orders had no hangings. Shakspeare alludes to this rough building of houses even in his time;—

'Imperial Cæsar, dead and turn'd to clay,
Might stop a hole to keep the wind away.'

Even the nobility went without glass to their windows in the fourteenth and fifteenth centuries. 'Of old time,' says Harrison, 'our country houses, instead of glass, did use much lattice, and that made either of wicker or fine rifts of oak, in checkerwise.' When glass was introduced, it was for a long time so scarce that at Alnwick Castle, in 1567, the glass was ordered to be taken out of the windows, and laid up in safety, when the lord was absent."

Mr. Knight's little book is full of wisdom and kindness.

PROVINCIAL NEWS.

Brierley-Hill.—The first column of the new market-place here was raised on 22nd ult. and some few stalls were expected to be ready by Saturday, the 30th. The foundation-works have been very extensive; between 5,000 and 6,000 tons of "pit bank" refuse being already carted on the spot to get it the required level. This has prevented the contractors from opening it by Christmas. The cartings are got up by Mr. Wm. Holcroft, of Bilston. The entrance-gates will be supplied by the Messrs. Haywood, of the Phœnix Foundry, Derby.

Dudley.—The exhibition of prize drawings of the several schools of art in the provinces has closed here. Many of the specimens, by young pupils, would do honour to a much older hand. Some of the designs for chimney-pieces, &c. were very good, but the principal design was one for the brazen doors of St. George's Hall, Liverpool. The erection of the new station at Dudley is deferred *sine die*, no arrangement having been entered into by the competing companies who occupy the present large area. The South Staffordshire have declined to accommodate the public using their line.

Milford Haven.—Progress has been lately made with the fortifications in Milford. The Stack Rock has been completed for some time, and the guns have been mounted, and the whole garrisoned by soldiers. At Thorny Island, at the entrance of the haven, a fort has been newly erected, and nine guns placed in it. It commands not only the mouth of the harbour, but also the whole haven up to Milford. The extensive works at Dale Point, opposite Thorny, are progressing. When completed, this battery will be able to cross fire with the one on Thorny, and command the whole haven up to Pembroke Dock, if the guns have a range long enough.

Liverpool.—A pile of business premises has been erected at the corner of George-street and in Oldhall-street, near Chapel-street, close to the Exchange. The style chosen by the architect, Mr. W. Culshaw, is Palladian. The stone dressings are from the Poolmouth quarries, near Wrexham; and the interspaces are filled in with patent red brick. The front to Oldhall-street, in the first or ground-floor story, consists of a series of segmental arches relieved by rustications. The entrance to the offices and court is through an arched gateway, with ornamental keystone, moulded dadoes, pilasters, and entablature, over which is a Venetian mirror, relieved with pilasters, entablature, and ornamental scrolls at the sides. The remaining windows of the first floor have pedimental heads and scrolls, the whole resting upon a dado balustrade. The upper windows have architraves and moulded heads, with scrolls, &c. The principal cornice is surmounted with a balustrade. The internal arrangements are adapted for brokers. The cellars extend under the whole area, and are arched with brick. They are suitable for wine-merchants and others. The persons engaged in carrying out the works are—Messrs. J. Burrows, joiner; R. Wells, stonemason; Duckworth, bricklayer; Lingard and Merrick, plumbers; T. Jones, plasterer; and W. Williams, ironfounder. The property belongs to Messrs. Myers, of this town. The outlay, it is said, must have been upwards of 10,000*l*. The rearing was celebrated by a dinner, at the Royal Hotel, Dale-street, to the architect, contractors, &c. together with about 140 of the men engaged in the works.

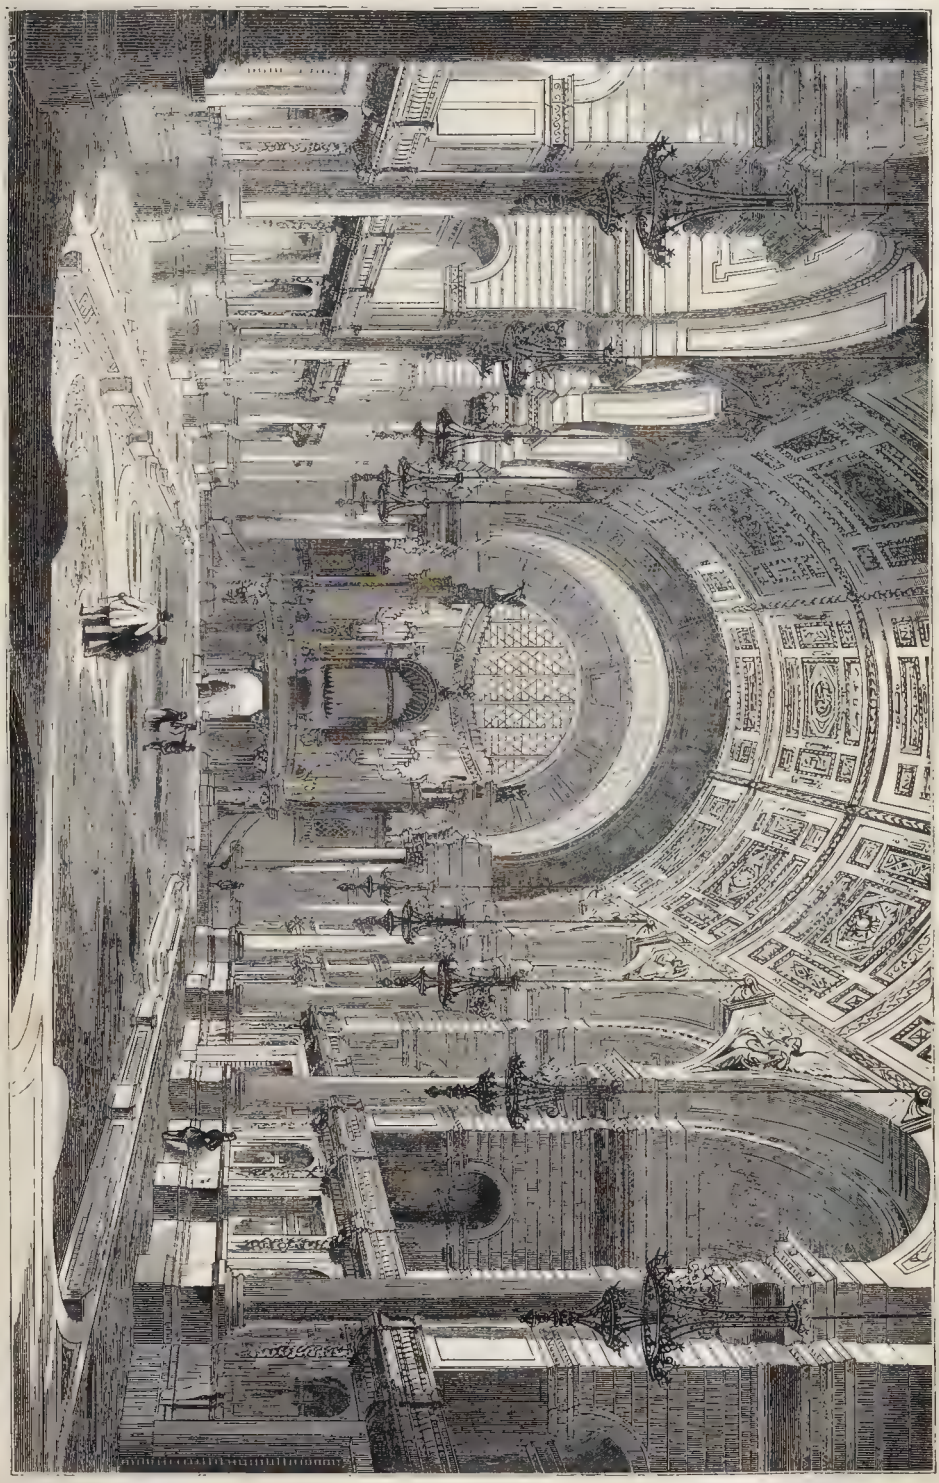
Doncaster.—A meeting of the local Cemetery Commissioners was held at the Town-hall here, on Wednesday before last, for the purpose of opening the tenders for the several works required in the erection of two cemetery chapels and a lodge and entrance gateway, after a design by Mr. R. J. Johnson, the architect. There were three complete tenders, and seven in all. It was unanimously agreed that that sent in by Messrs. T. and C. Anelay, of this town, builders, be accepted. It was also agreed to advertise for tenders for laying out the ground, according to the plans of Mr. Appleby, forthwith. The respective works, it appears, will be completed for the original sum proposed by the commissioners. "This," observes the local *Gazette*; "will set at rest the complaint of the competitors in the adoption of the present design, for competent parties have undertaken its completion at the amount not exceeding the sum fixed."

Huddersfield.—For a long time past the brethren of the "Sons of Truth" Lodge of Freemasons here, have felt the want of a suitable building for the transaction of their business, but not being able to meet with one, they resolved to build for themselves, and by perseverance this *desideratum* is now being accomplished, a site having been secured in Fitzwilliam-street, with frontage to the street, and ground being taken in the rear for a lodge-room, twenty-yards in length. On Wednesday before last, a number of the brethren met on the ground, and laid the "corner" stone, with the usual ceremonial, the building itself having been raised to the level of the ground. Brother W. H. Brooke is the architect; Brother J. Kirk, contractor; and Brother J. Ratcliffe, superintendent of works.

Keswick.—The foundation stone of a new building intended for a Mechanics' Institute and Lecture-hall, was laid on Saturday in week before last, at Keswick, by the Rev. T. D. H. Battersby, incumbent of St. John's Church in that town. The new building, which will adjoin the Keswick library, has been designed by Mr. G. Watson, jun. architect.

Wigan.—We are informed that the Burial Board has selected the designs of Mr. Barry, of Liverpool, for the erection of three chapels, two lodges, and railway-bridge, and that the works are to be commenced forthwith.

WAR, AND THEN THE ARTS.



THE achievements of the warrior have exerted upon the arts a deep-felt influence, especially in the ancient heroic epochs. To the valour and to the victories of leading men in armies and in fleets we are indebted for some rich and attractive works of monumental art. Among these are master-pieces of the greatest sculptors. The finest and most complete effects of other arts—of painting, poetry, rhetoric, music, and the drama—have been produced in commemorating the warlike deeds of warlike men. Yet they have, perhaps, afforded to the art of sculpture, more particularly, some of the grandest subjects for representation. The awful—the tragical incidents of war,—the suffering borne with such fortitude by the wounded and dying,—the prompt action, the courage, and the skill of the soldiers,—these have called forth the abilities of the artist, and tasked his power of expressing the human passions.

The Parthenon of Minerva, at Athens, when in all its glory, exposed, to the view of the Athenians, the victories obtained by Theseus against the Centaurs and the Amazons,—victories which might have flattered their vanity, but which could not fail to have fired their bosoms with patriotism. These victories, sculptured by Phidias, were the objects of excessive admiration: they have always been esteemed the most celebrated relics of ancient art, and were worthy of the unrivalled fame they adorned.

The arts profited by the example of Phidias; and, although the frequent introduction of the Centaur in the metopes of the Temple was founded on a myth,—the mythology of Greece entering into everything,—yet we cannot but admire the agreeable form that the genius of Phidias gave to this mixture of the human figure with that of the horse; and we find a happy use was made of this in sculpture, chiefly as a temple-decoration, for several centuries.

The representation of these battles was calculated to elevate and to perpetuate the glory of the Athenians; nor were the impressions which, as perfect works of art, they conveyed, lost upon them,—impressions which we ourselves, fortunately, are enabled to receive at the present hour.

F. L.

INTERIOR OF ST. GEORGE'S HALL, LIVERPOOL.—The Late Mr. H. L. Elmes, Architect.

[see p. 1, *ante*]

ON THE PUMPING OF WATER FROM PITS AND MINES.

THE fundamental principle that regulates the arrangement of the apparatus employed for the purpose of pumping water from pits and mines, is simply the statical equilibrium that obtains, between the pressure of steam in the cylinder of the engine, and the weight of the column of water whose transverse section or base is the piston of the pump, and altitude the vertical distance between the surface of the water in the pit or mine, and the point at which the water is discharged. When the condition of equilibrium has been obtained, it is easy in practice to give the engine the preponderance, either by increasing the pressure of the steam, by enlarging the diameter of the cylinder, or by diminishing the diameter of the pump. This, however, is a point peculiar to the province of the practical engineer: our present object is to investigate the condition of equilibrium, and to simplify the rules for calculating that condition; and for this purpose,

Put D = the diameter of the cylinder of the steam-engine in inches;
p = the pressure of the steam on a square inch of the piston in pounds avoirdupois;
w = the entire pressure of the steam on the piston of the cylinder; and
0·7854 = the constant fractional coefficient, or the area of a circle of which the diameter is unity.

Then, by the rules of mensuration, the area of the piston is $0{\cdot}7854\,D^2$, and the whole pressure of the steam is

$$w = 0{\cdot}7854\,D^2\,p \quad \ldots\ldots\ldots\ldots (A).$$

This equation represents one member of the equilibrium, and in order to obtain another member with which to compare it, we must extend the notation in reference to the pump as follows:—

Put d = the diameter of the pump in inches.
h = the height to which the water is raised in feet.
w = the whole weight of the column of water in pounds avoirdupois, and
62·5 = the number of pounds in 1 cubic foot of water.

Then, by the rules of mensuration, the area of the pump-piston or bucket is $0{\cdot}7854\,d^2$, and the whole weight of the column of water is

$$w = \frac{0{\cdot}7854 \times 62{\cdot}5\ d^2 h}{144} \quad \ldots\ldots\ldots\ldots (B).$$

This, therefore, is the other member of the equilibrium; consequently, by equating the members (A) and (B), and casting out the common quantities, we finally obtain

$$2{\cdot}304\,D^2 p = d^2 h \quad \ldots\ldots\ldots\ldots (C).$$

Now, from this equation in the form it has here assumed, any one of the variable quantities which it involves, can be determined in terms of the other three, together with the constant multiplier or coefficient 2·304, which is the quotient of 144 divided by 62·5; that is, $\frac{144}{62{\cdot}5} = 2{\cdot}304$.

The equation marked (C) indicates the state of equilibrium between the pressure of the steam and the weight of water which opposes it when no work is performed, and we now proceed to determine from its analysis, the diameters of the cylinder of the engine and the pump when the condition of quiescence obtains, and also the effective pressure of the steam in the cylinder and the height of the column of water.

PROBLEM 1.—*To find the diameter of the pump, having given the diameter of the cylinder of the engine, the pressure of the steam on a square inch of the piston, and the height in feet to which the water is to be raised.*

Referring to the equation marked (C), which involves the conditions of equilibrium, and reducing it in reference to d, the symbol denoting the diameter required, we have—

$$d = \sqrt{\frac{2{\cdot}304\ D^2 p}{h}} \quad \ldots\ldots\ldots\ldots (1).$$

Now, the form of this equation is sufficiently simple for every practical purpose; but nevertheless, it will be useful for those who are unacquainted with analysis, to have the mode of reducing the equation expressed in words, as follows:—

RULE.—*Multiply the square of the diameter of the steam cylinder by the pressure of the steam upon a square inch of the piston, and again by the constant number* 2·304; *then divide the product by the height of the column of water in feet, and the square root of the quotient will be the diameter of the pump in inches.*

With the rule thus expressed, there can be no difficulty in finding the diameter of the pump from the same data, in any case that may be proposed; but the solution of a numerical example, will tend greatly to elucidate the subject.

EXAMPLE 1.—Suppose the diameter of the cylinder of a steam-engine to be 22 inches, the the pressure of steam upon a square inch of the piston 25 lbs. and the height to which the water has to be raised 66 feet; what will be the diameter of the pump, when the weight of the column of water and the pressure of the steam are in equilibrio with each other?

Here, by the rule, we have—

$$d = \sqrt{\frac{2{\cdot}304 \times 22 \times 22 \times 25}{66}} = 20{\cdot}552 \text{ inches},$$

the diameter of the pump; therefore, in the case of an equilibrium, it will be $2{\cdot}304 \times 22^2 \times 25 = 20{\cdot}552^2 \times 66$. But in this case, there will be no water raised; therefore, in order to render the apparatus effective, either the number 22 or 25 must be increased, or 20·552 must be diminished, no matter which; yet it may so happen in practice, that one may be more advantageous than another.

PROBLEM 2.—*To find the diameter of the cylinder of the steam-engine, having given the diameter of the pump, the height to which the water is to be raised, and the pressure of the steam upon a square inch of the piston.*

Recurring to the equation marked (C), in which the conditions of equilibrium are represented, and reducing it in reference to D, the symbol denoting the diameter of the cylinder, we have—

$$D = \sqrt{\frac{d^2 h}{2{\cdot}304\,p}} \quad \ldots\ldots\ldots\ldots (2).$$

This equation is not more difficult to reduce than the preceding one; but it is a little different in the manner of its composition; this, however, adds nothing to the labour of calculation, and the following is the rule for performing the operation.

RULE.—*Multiply the square of the diameter of the pump in inches by the height in feet to which the water has to be raised, and divide the product by* 2·304 *times the pressure of the steam on a square inch of the piston of the engine, then the square root of the quotient will be the diameter of the cylinder in inches.*

The following numerical example will show the manner of applying the rule:—

EXAMPLE 2.—Let the diameter of the pump be 26 inches, the height to which the water is to be raised 132 feet, and the pressure of steam upon a square inch of the piston of the engine 20 lbs.; what will be the diameter of the engine, when an equilibrium obtains between the pressure of the steam and the weight of water to be raised?

Here by the rule we have,

$$D = \sqrt{\frac{26^2 \times 132}{2{\cdot}304 \times 20}} = 44 \text{ inches},$$

the diameter of the cylinder. This is the diameter when the apparatus is in equilibrio; but in order that the engine may be made to preponderate, one or other of the quantities concerned must be altered, as stated in the previous example.

PROBLEM 3.—*To find the height of the column of water in feet, having given the diameter of the steam cylinder and that of the pump barrel, both in inches, together with the pressure of the steam on a square inch of the piston in pounds avoirdupois.*

Recurring to the equation of equilibrium marked (C), and reducing it in reference to the symbol h, we obtain the following expression for the height of the balancing column, viz.:—

$$h = \frac{2{\cdot}304\ D^2 p}{d^2} \quad \ldots\ldots\ldots\ldots (3).$$

This equation is simpler in its reduction than either of the former two, seeing that there is no extraction of the square root required in the operation, and the following is the practical rule for its reduction.

RULE.—*Multiply the square of the diameter of the steam cylinder in inches by* 2·304 *times the pressure of the steam in pounds avoirdupois per square inch, and divide the product by the square of the diameter of the pump in inches, for the height of the column of water in feet.*

EXAMPLE 3.—Suppose the diameter of the steam cylinder to be 44 inches, and that of the pump 26 inches; what must be the height of a column of water, to equipoise a pressure of steam of 20 lbs. on a square inch of the piston?

Here the operation, according to the rule, is

$$h = \frac{44^2 \times 2{\cdot}304 \times 20}{26^2} = 132 \text{ feet},$$

the height of the column.

PROBLEM 4.—*To find what pressure of steam on a square inch of the piston of the engine, will balance a column of water* 132 *feet in height, the diameter of the steam cylinder being* 44 *inches, and that of the pump* 26 *inches.*

Referring to the equation of equilibrium marked (C), and disengaging the symbol p from the terms with which it is combined, we get as follows, viz.:—

$$p = \frac{d^2 h}{2{\cdot}304\ D^2} \quad \ldots\ldots\ldots\ldots (4).$$

This equation, like the one immediately preceding, does not require the extraction of the square root; for the symbol p, whose value is represented by it, enters the equation of equilibrium only in the first degree, and consequently its value is found by simple multiplication and division, as directed by the rule following, viz.:—

RULE.—*Multiply the square of the diameter of the pump in inches, by the height of the column of water in feet, and divide the product by* 2·304 *times the square of the diameter of the steam cylinder in inches, for the pressure of the steam requisite to balance the column of water.*

EXAMPLE 4.—Suppose the diameter of the pump to be 26 inches, and that of the steam cylinder 44 inches, what pressure of steam will balance a column of water 132 feet in height, its diameter being the same as that of the pump?

Here, according to the rule, we have

$$p = \frac{26^2 \times 132}{44^2 \times 2{\cdot}304} = 20 \text{ lbs.}$$

the pressure required.

T.

CHURCH-BUILDING NEWS.

Swalcliffe (Banbury).—On 22nd ult. the ancient church of St. Peter and St. Paul, Swalcliffe, which has been recently closed for the purpose of renovation, was reopened for Divine service. The pews have been lowered and rearranged, the unsightly gallery at the west end entirely removed, and the whole nave cleaned and renovated. At the east end of the chancel is a window of stained glass (the donation of the warden of New College), representing four incidents in the Old Testament, and the like number in the New. Six other windows in the chancel,—two of them presented by the Fellows of New College,—three, the gifts of private individuals,—and one, with the figures of St. Peter and St. Paul, presented specially to the vicar by the clergy and others of the neighbourhood,—may be noticed. The seats in the chancel, which are of oak, have been thrown open. The screen between the chancel and nave has been lowered and repainted, and the sounding-board, which for many years disfigured the pulpit, has been removed.

Gornal Wood.—The new chapel at Gornal Wood, for the Methodist New Connection, just erected by Messrs. Hinton, under the superintendence of Mr. Wigginton, architect, was opened on the 19th ult. when 199*l.* was collected. The chapel is 44 feet by 36 feet in the clear, and accommodates 550 worshippers, and,

instead of a pulpit, it is fitted up with a platform, circular on face, 14 feet by 7 feet, for the purpose of facilitating the holding of missionary meetings.

Teignmouth.—A small Roman Catholic Church was opened with considerable ceremony in this town on the 19th ult. It is dedicated to St. Charles, and is in the Gothic style, from plans by Mr. Hansom. The cost, including internal fittings, is about 1,000*l.* Mr. S. Hayman, of this town, was the builder.

Greenacres (*Oldham*). — A Congregational Church was opened here in August last, and occupies a lofty position on Greenacres-hill, near the town of Oldham. The plan is in the form of a cross, the nave and transepts being all of the same width and height. Five arches of brickwork spring from the angles of the cross, and support the roof, in lieu of wood principals. The tower contains a centre shaft, which finishes with a small spire, and is made to ventilate the interior of the church. Each arm of the cross is occupied by a gallery, and there is accommodation for 800 people. The extreme outside length is 73 feet 6 inches; ditto width, 56 feet 6 inches. The total cost was 2,100*l.* including heating apparatus, architect's commission, &c.

Greenock.—Miss Stewart, sister of Sir Michael R. Shaw Stewart, Bart. has given 10,000*l.* to endow an Episcopal Chapel in Port Glasgow, securing 200*l.* a year to a rector, and 100*l.* to a curate. A church, having chancel and nave, and a rectory and schools, will also be erected by the same lady, and will be finished by Whit-Sunday, 1856. The ground will be given by Sir Michael. The congregation is to be burdened only with the maintenance of the fabric, in which there is to be daily service, and the seats are to be free and unappropriated for ever.

SIGHTS AND SCENERY.

Royal Princess's Theatre.—The pantomime here is founded on the immortal story of "Blue Beard," and is very neatly put together. The best scene in it, so far as the painter is concerned, is the Enchanted Garden, by Mr. Gordon, and the most excellent for what is technically called the "business" of it, is the Quarter Deck of the *Royal Albert*, fully manned by a crowd of children. The imitation of the Spanish Dancers by the clown, Mr. Huline, and the new French dance *La Flotte*, wherein the allied fleets are manœuvred on the heads of the ballet corps, are amongst the good points of the piece. Dramatically, the acting of Mr. C. Kean and Miss Heath, in "The Stranger," is the event of the week.

Royal Lyceum Theatre.—As usual in the extravaganzas at this theatre, Mr. Beverly puts forth his strength in the last scene of each act of "Prince Prettypet;" the first, a piece of fine painting, the Crystalline Haunt of the Butterflies; the second, one of those combinations of colour, mechanical arrangement, and pretty faces, for the invention of which the public are indebted to him. Scenes after the same type are now introduced at most of the theatres, but the originator maintains his ascendancy. The Crystalline Haunt is very like a scene in a previous piece, but is, nevertheless, singularly beautiful. The extravaganza is very well played and sung by Miss Gordon, Miss Ternan, and Mr. F. Matthews.

Theatre Royal, Adelphi.—The last scene of the first act of the extravaganza here, called "Zigzag Travels of Messrs. Danube and Pruth," represents the Banks of the Danube by Moonlight, and is very effective. It is of the character that Mr. Pitt does best. The piece itself is all about everything: it has some very good dancing in it, some pleasant singing, and one scene of genuine acting,—the fraternization of the French and English troops, represented respectively by Mr. Gardon (very cleverly) and Mr. Paul Bedford. The descent of the "divingbelle" in the first scene is a good notion.

Theatre Royal, Drury-lane.—Touching the glittering and in many respects very clever pantomime here, we will allow a correspondent to speak for himself:—

"In the Drury-lane pantomime 'Jack and Jill' may be seen two gigantic sticks of celery, fixed to the O.P. and P.S. wings. They are of the full height (21 feet 6 in.), from the 'boards' (or stage) to the 'flies,' and were modelled from nature by 'Dykwynkyn,' whose real name has appeared in nearly every number of the *Builder* from its commencement as the patentee, &c. of a material intimately known to and extensively used by every architect of eminence in the profession, and of course by *builders* generally. 'Dykwynkyn' claims the merit of being the first who ever *attempted* to model scenery, and its subsequent treatment—colouring and decoration, and the said 'Dykwynkyn' disclaims all connection with." K. M. C.

The Polytechnic.—Some excellent additions have been made to the entertainments here, including a capital exposition by Mr. Pepper, of Professor Wheatstone's experiments on the developments of sound by means of reciprocating surfaces. A band playing in a distant apartment are unheard; but connect the different instruments, by means of thin rods of wood, each with the sounding-board of a harp in the lecture-theatre, and the music is audible to all as if it were present. The experiments prove, what we have often speculated on, that music might be *laid on* to the houses of a town from a central source like power, gas, or the water. A well-known joker, at the private view, proposed the establishment of a "band-ditty" company on the spot. The wild story of Sindbad the sailor, is told by Mr. George Hodder, and is charmingly illustrated by a series of dissolving views and other optical effects,—the best, as a whole, ever seen. And then there is Perkins' steam-gun, with all sorts of things besides.

THE DECAY OF STONE.

The skilful combination of practice with science in your admirably conducted paper, induces me to send you the following observations, in the hope that they may prove interesting and useful to the intelligent practical men who read the *Builder*. The tower and spire of All Saints' Church, Wakefield, are built of the common sandstone of the neighbourhood, and are in a very dilapidated condition. The mortar used in the erection may fairly be supposed to have come from the nearest (which is also the best) source, and to be of the kind now employed, which is principally made from the magnesian limestone. Externally decay has done its work too completely to allow of the examination of its process which is possible within, and certainly when the perishing of the stone in this old building is taken in connection with certain appearances in new ones, much interest is attached to it. A few stones which have either been faulty when placed in the wall, or laid with vertical instead of horizontal beds, have perished variously, and often from the middle towards the edge. But, these excepted, the rule of decay is almost universally *from the edges towards the middle*, commencing at the stones' junction with the mortar. In the majority of instances, the tool marks in the centre are as fresh as when the workmen placed the stones in the building, while at each edge nearly every stone is perishing. The obvious inference from this is, that the contact between the mortar and the stone is the cause of the phenomenon. May not the *mode* of this action be learnt from what is seen in new buildings? The stone, when laid in a wall at first, is uniform in colour, and remains so for a few days, the time apparently depending upon the hygrometric state of the atmosphere, and the wetness of the mortar. Soon a dark discoloration is visible along the point, and creeps over much of the face of the stone, and I have even seen it extend over the whole of a quoin a foot square. In process of time, as the work becomes dry, the original dark band next the joint appears bleached, and remains permanently whiter than the rest of the stone. This *whitened portion* in modern work, corresponds accurately with the *perished portion* in the old, and if both have not the same origin, the coincidence is remarkable. But how are we to account for what we see take place at present? I believe analysis will show that the stone contains a soluble salt of the protoxide of iron as well as of soda. That the caustic hydrate of lime acts upon these, and withdraws so much of the iron as is within its reach (*i.e.* what was contained in the portion which becomes whitened), and forms a double salt with it, while it only deprives the soda salt of its acid. This latter gradually effloresces, whitening the stone, and causing it to decay. Confessedly this explanation is hypothetical till demonstrated by analysis, but yet I think the following fact will render it highly probable. When my church was built, the mortar for the external work was specified to be mixed with coal-ashes to darken it. For this I substituted sand from an ironfoundry, which after it is useless for moulding is mere waste. This necessarily contained a considerable quantity of protoxide of iron, and if the above explanation have any value, it ought to have prevented the phenomena witnessed, when lime is used in its normal state. Such was the fact. No discoloration and no subsequent bleaching were visible where this mortar was employed, whereas all the stone in the interior of the church exhibited the action of the mortar in a marked manner. It is now eight years (a considerable period for stone to remain uninjured by our smoke and wind), since the work was done, and I have not detected an instance of joint perishing in the whole. The stone inside a new church, recently erected in the town, is now passing through the dark stage, and I suppose by next summer it will reach the lighter one. The action of lime upon the bricks of this district, is to render them nearly as white from a soda efflorescence as if they had been dusted with flour. I should not have troubled you with these details, had they appeared generally known, which does not appear to be the fact. I called the attention of two friends, who are architects by profession, and of several practical builders, to the joint perishing, and its apparent connection with discoloration, and was informed that the subject was quite new to them. I thought, therefore, they might prove both interesting and useful. If so, two small walls of brick, and two of stone, might be built with each kind of mortar, and when all action appeared to cease, the mortar stones and brick in each case might be analyzed, and the results compared with an analysis of each made before the experimental walls were erected, and thus the question here raised would receive a solution.

W. R. Bowditch.

THE ABUSE OF WORKS BY LIVING ARCHITECTS.

No one, I suppose, will be bold enough to dispute the position of your correspondent "R. W." "that personal considerations should not be allowed to interfere with criticisms that have for their object the discovery of the truth." But there is a limit beyond which criticism loses itself, and begins to wear all the appearance of abuse, and when carried to this extent, I think it may well be doubted whether it in any way assists our progress towards the truth.

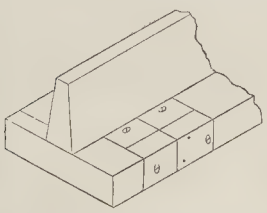
Suppose a man to have an earnest desire to enable the public to appreciate beauty in architecture. He begins to inculcate principles which he feels to be true and incontrovertible. Suppose, further, that they *are* so, and that he has put them forth in a clear, intelligible, and practical manner. Then his hearers and readers will be perfectly competent to decide for themselves on the merits of the buildings that are rising around them. He will have no occasion to go on and settle for them in strong language what buildings they may set down as bad, except, indeed, to minister to the indolence of those who like to have their thinking done for them, and to enable them to say, "I dislike it because Mr. So-and-so abused it." In any other way than this, the language of abuse can never add force to principles founded on truth; and if it be unnecessary, it surely is natural to expect that a critic of liberal mind will show a slight degree of consideration for private feeling by observing some moderation in his use of superlative adjectives.

M. A.

WATER IN COVENTRY.

As a humble inhabitant of Coventry, allow me to thank you for the well-merited strictures which appeared in your paper, on the late case of water-stealing which came before our magistrates; for the powers that be are so omipotent here that they are callous against any merely local rebukes. The true secret of this constituting of water-taking into a *criminal* offence is, that the corporation have of late years become *water sellers*, and, therefore, the waterworks are converted into an engine of taxation. These waterworks, although established at the public cost, by the sale of public property, or the mortgaging of the public rates, are a most oppressive instrument in the hands of the corporation. Coventry has a large

and poor population, which formerly used to be plentifully supplied with good water from numerous public pumps and wells. These have, to a great extent, been destroyed, dried up by tapping the springs, or otherwise rendered useless; and then the corporation, having effected or permitted this spoliation, caused informations to be laid, by hundreds at a time, charging people with being destitute of water, and compelling them to lay on from the public works, in order to swell the corporation revenue.



The principle of equity points out the old public gratuitous supply of water ought to be maintained; and I think it dictates with equal force, that inasmuch as the waterworks are the property of the town, the charge for water ought to be no more than is necessary to pay the working expenses, the interest of the capital, and a small annual amount towards the reduction of the debt upon them.

The manner of charging for water is also most anomalous and unfair. Under the Public Health Act, by which the corporation are enabled to compel persons to *purchase* water (after having dried up the gratuitous supply), they cannot charge more than at the rate of twopence per week; but under their own Waterworks Act they impose a water-tax of one shilling in the pound, on the full rental of a house. But then there is another system of compounding, whereby our householder, under certain circumstances, may get his water for little more than half what his next door neighbour does. In short, the entire system of water-supply, water-charge, and water-taxation in Coventry, is full of anomalies and injustice; and if the *Builder* can aid in the improvement or correction of such a system, by calling attention to it, a great boon will be conferred upon those who suffer from it.

A BURGESS OF COVENTRY.

STANDARD TO TEST LINEAL MEASURE.

BY an accident, the diagram showing the standard for testing lineal measures, proposed by the writer of the article in our last number (p. 664, vol. xii.) was not inserted. We now rectify the omission. The diagram is to about a one-third scale, and shows one end of the standard proposed. The bottom piece, or scale, is about 41 inches long, 3 inches broad, and ⅜ inch thick, with an edge-bar 1¼ inch deep. The material is straight-grained yellow pine, as full of turpentine as can be selected; and it is essential that the edge-bar shall be cut from the side of the same piece as the bottom or scale. The edge-bar is attached by six strong brass screws from under the bottom-piece. On one side of the scale there are four brass return-plates, and on the other side are two similar plates, all let in flush with the wood, and

securely screwed with brass screws; the four on one side being for 3 feet, and the two on the other for a length of 5 links of the land-chain. When finished, varnished, and suffered to stand by for a few weeks, the feet and links are struck off from the dividing-engine, taking an opportunity, when the temperature of the air is 62°, so as to get upon the wooden scale the true legal measure. A small plate of ivory or brass should be screwed on each side of the edge-bar, one stating that the measure is feet, the other links, with the temperature noted. Such a standard as this is strong, not liable to be put out of order, and is adapted for the office or workshop, for testing the various measures employed.

FIXTURES.

ELLIOTT AND BISHOP.

THIS was a special case in the Court of Exchequer, framed under the recent Act, for the opinion of this Court on facts which may be thus briefly stated:—

The plaintiff took a lease for 97 years of a newly-erected building in Camden-town, intended for a tavern, from the ground landlord, and, having expended a large sum of money in finishing and fitting it up fit for immediate occupation, he sold the lease, less a fractional part, to the defendant, for nearly 6,000*l.* including 5,000*l.* for goodwill, 50*l.* for trade-fixtures, and 72*l.* 16s. for tenant's fixtures, under the usual valuation. By the terms of the contract the new lease was to contain, and did contain, a clause which was in the original lease, and by that the defendant bound himself to give up the premises at the termination of his lease, "together with all locks, keys, bars, bolts, marble and other chimney-pieces, foot-pieces, slabs, and other fixtures and articles in the nature of fixtures, which at any time during the said term should be fixed or fastened to the said demised premises or be thereto belonging." Under these circumstances the defendant objected to pay the valuation for the trade and tenant's fixtures, contending that the plaintiff had no right to remove them, and could not therefore sell them, in which predicament the defendant would also be at the termination of his sub-lease. The plaintiff, on the other hand, contended that the words "other fixtures" ought to be confined to fixtures *ejusdem generis* with those which preceded it in the clause in question, and the operation of which would then apply only to landlord's fixtures.

The Court also differed in opinion on this case.

Mr. Baron Parke was of opinion that the clause applied both to trade and tenant's fixtures, and that the plaintiff could not recover in respect of either.

Mr. Baron Platt was of opinion that the clause applied to neither, and ought to be limited to landlord's fixtures, in which case the plaintiff would recover for both classes of fixtures sold to the defendant.

Mr. Baron Martin took a middle course, and a judgment was delivered on his behalf to the effect that the plaintiff could recover for the trade-fixtures, and not for the tenant's fixtures.

The consequence of this diversity of opinion was, that the judgment of a majority of the Court was against Mr. Baron Parke, and for the plaintiff in respect of the trade-fixtures, and a majority against Mr. Baron Platt, and in favour of the defendant, in respect of the tenant's fixtures. In the end, therefore, judgment was given for the plaintiff for 50*l.* that being the agreed value of the trade-fixtures.

Judgment for the plaintiff accordingly.

Notices of Books.

VARIORUM.

We have a pile of books before us, and must speak at length of some of them hereafter. Messrs. Longman have issued a fresh edition (the third) of Gwilt's very valuable "Encyclopædia of Architecture," but we do not observe that any considerable additions have been made since the second. It should be possessed, and used, by every architectural student.——Neville's "Hydraulic Tables, Coefficients and Formulæ," published by Weale, may be very usefully consulted by all who have occasion to investigate the discharge of water from orifices, notches, weirs, pipes, and rivers. Mr. Neville is the county surveyor of Louth and Drogheda. An elaborate set of tables is appended.——The second volume of "The Chemistry of Common Life," by Jas. F. W. Johnston, M.A. (Blackwood and Sons), is completed, and is full of valuable information, conveyed in a very interesting form.——"The Handbook for Young Painters," by C. R. Leslie, R.A. (Murray), is a very important manual, fully illustrated.——The same publisher has issued a work in three volumes, on "The Origin and Progress of the Mechanical Inventions of James Watt," by J. P. Muirhead, M.A. which will afford us matter for an article.——The reports of the Analytical Commission of the *Lancet*, on the solids and fluids consumed by all classes of the public, have now taken the shape of a book, under the title of "Food and its Adulterations," by Arthur Hill Hassall, M.D. (Longmans). Mr. Wakley incurred great responsibility by publishing the names and addresses of the parties from whom the articles examined were purchased, and Dr. Hassall bears testimony to the strict impartiality and disinterested conduct of Mr. Wakley throughout the publication of the reports.

AN AMERICAN MILL.—The *Lowell* (Mass.) *Journal* speaks of a mill called the Pacific, at Lawrance, of which the floor surface is sixteen acres. There are now in operation in this mill, it states, 40,000 cotton spindles, and 10,000 worsted spindles, and these are to be increased to 80,000 and 20,000 respectively. There are 1,200 looms in operation, to be increased to 2,400. These, with 2,000 hands, produce 300,000 pieces of cloth per annum, one-half delaines. Once a month the 2,000 hands (females chiefly, it would appear) assemble at the cashier's office, when they are paid about 50,000 dollars for wages.

Miscellanea.

VALUE OF BUILDINGS AND GROUND IN MELBOURNE.—In one case, a house purchased for 250*l.* lately fetched 12,000*l.* Another offered to Government for the use of military officers for 3,000*l.* a month after was valued at 5,000*l.* They still hesitated, and the price gradually rose to 6,000*l.* which sum Government declined giving, having about that time received iron barracks. As another instance, Government long desired Degrave's blue-stone store, and made many liberal overtures, but without tempting the proprietor to sell. They at last asked him to name a price. He meditated awhile, and then, as his *ultimatum*, named 85,000*l.* The price of town-land is declared to be almost beyond credit, there being no limit to the extravagant idea entertained by buyers, as well as sellers, as to its value. Of late there has been a sad depreciation, however, in all sorts of merchandize here. The recoil of glut is found in almost every department, and as a consequence, numerous failures have taken place. Some accounts state that firms, worth 20,000*l.* six months since, could not now strike a balance of as many shillings in their favour. Artisans are said to be suffering proportionately from the depression.

THE IRON TRADE.—Prices, as usual, after being screwed up to the highest possible pitch, are now tumbling down faster than they rose. At the preliminary quarterly meeting of South Staffordshire iron manufacturers last week, there was a complete split of the self-constituted authorities in the trade of that district, the majority being determined to pull down prices, which they formally did, to the extent of 30s. a ton for sheet iron, and 20s. for other kinds, while some went even so far as to insist on a reduction of 40s.—a determination which they declared they would carry out by circulars dating from 1st January, notwithstanding the decision of the majority; and those, on the other hand, who resisted all reduction, announced that they left the meeting under no obligation to abide by its decision. The nominal prices of the majority are—bars, 10*l.*; hoops, 11*l.*; sheets, 11*l.* 10s. Ordinary hot blast pigs are quoted at 4*l.* 10s. to 4*l.* 15s. Manufacturers are said to be pressing hard on the pig-furnace proprietors, offering prices so low as to be equal to a reduction of 4*l.* a ton on finished iron. The American trade seems to be near a close, as there is scarcely an order for iron of any description from America. Whether it be now too late for lower prices to tempt the Americans back again remains to be seen. New iron fields are being opened in the west of Scotland.

MILITARY TRAINING.—A correspondent of the *Bath Herald*, "H. L." suggests that Government should invite teachers to employ drill-sergeants to teach the boys under their tuition the manual exercise. Painful as it is to think there is any necessity for cultivating a military spirit in this way, it certainly would have its advantages in a sanitary view, as we have often urged in more peaceful times; and should the rising generation not require to use their gymnastic and manual acquisitions under military circumstances when they grow up, so much the better; meantime, they will certainly have derived both physical and moral benefit from such training.

THE SCOTTISH ARCHITECTURAL EXHIBITION.—On Friday, the 29th ult. the Scottish Exhibition of Arts and Manufactures connected with architecture, was opened in the new Exhibition-hall and Galleries, Bath-street, Glasgow, when a numerous assemblage took part in the opening ceremonial, including the Lord Provost of Glasgow, Sir Archibald Alison, Sheriff Bell, and the Committee of Management. We shall return to the subject; meantime we may state that the building consists of two large halls and several ante-rooms. The largest of the apartments extends the whole length of the building, and is lighted from the roof. On the east side of this hall are five rooms, each fitted up in a different style. Over these is the second hall, also lighted from the roof, but, of course, only half the height of the principal apartment. In the front building towards Bath-street, there are also several smaller rooms, each appropriated to a particular department.

THE BUILDERS' BALL.—As already announced, the usual annual ball in aid of the Builders' Benevolent Institution, will take place on the 8th of February, at Willis's Rooms, St. James's. We hope the gentlemen connected with the trade—but more especially the ladies of their families—are doing their utmost to render this charitable assembly a brilliant one. The amount, by the way, required for the almshouses, is accumulating slowly. Why do not the trade make a grand effort to have them erected at once?

THE CITY STREET TOLLS AND DUES, payable by non-freemen, have been abolished, by order of the Common Council, a measure recommended by the Royal Commissioners. The net income the corporation lose by the abolition of the tolls amounts, it is said, to 4,593*l.* 13s.

Gas in Rome.—The establishment here, under the management of Mr. Shepherd, is working well, and will return a good profit in the first year, a thing not very common in the annals of Continental gas-works. Great complaints are made of the way in which some of the work from England was done. The loss of gas was very great in consequence; but, by opening the ground and repairing, the evil has been cured.

Lectures on Gothic Architecture at Doncaster.—Mr. E. B. Denison, Q.C. has been lecturing at Doncaster on Architecture, in connection with the parish church now in course of re-erection. The lecturer took occasion to combat the notion that the ornamentation of churches or even the building of them in the Gothic style, is connected with Popery; and showed how in all ages and in all countries of the world the passion for magnificent building, not only for religious but for all other public purposes, seems to be inherent in the minds of civilized men; and after giving amply sufficient illustrations of his statement, he remarked that it would be strange indeed if churches, which are intended for the highest of all public objects, should be the only public buildings consecrated to ugliness. As to the supposed connection between Gothic architecture and Popery, he said that it was a striking fact, that, although Gothic architecture arose among the nations who overran the ancient Roman empire and city, it had never been able to take root in Rome, the head-quarters of the Romish religion, or even in any part of Italy. It is equally remarkable that Gothic architecture decayed and fell long before the Reformation; that it was not revived by the Roman Catholics when it did revive; and that to this day they have not among them a single architect whose works are equal to several that could be named among our own. The best that can be said of their best architect, Pugin, he thought, is, that before his death he had learnt enough of architecture to confess that he had never erected a single church that was not a failure.

Caterham Railway.—The directors of the company for forming a railway from Caterham to Godstone-road Station, and thence to the West Croydon Station, have introduced a new feature into their scheme. Considering that the value of the adjacent land will be increased in value by the formation of the line, they have secured 150 acres of it; and this, at the first meeting after the opening of the line will be conveyed to the shareholders or their nominees in the proportion of one acre to the holder of each twenty shares of the original capital, with power to such of the shareholders as desire it, on payment of their shares in full, to select and have immediate possession of the land, to be taken in respect of their shares, the order of selection to follow the order of the payments of the shares. Every resident freeholder or leaseholder on the estate is to be entitled to receive from the company a free pass over the railway for twenty-one years from the opening of the line.

Fatal Sewer Accident at Derby.—An inquest was held on Tuesday week, at the Town-hall, Derby, on view of the body of a labourer, who met his death by the bursting of a water-pipe in a new sewer at Duffield-road. It appeared from the evidence adduced that the trench, which is part of the sewerage works being carried on by the Board of Health, is 12 feet deep, and 2 feet 6 inches broad. By the side of it runs a cast-iron water-pipe, which broke, and the water, as well as the earth upheaped upon the pipe (the near proximity of which the workmen were unaware of), rushed upon the deceased, and he was suffocated. An hour elapsed ere the body could be extricated, and life was then extinct. The jury found a verdict of "Accidental death," but strongly recommended that greater caution should be observed in future in the removal of the stretchers, more especially where the sewerage was deep.

Strength of Bricks.—In your publication of last Saturday, in the paragraph headed, "A Brick," you stated there must be some mistake in the figures. We beg respectfully to state that the weight referred to by the *Athenæum* was the lateral strength of the brick, and not the weight required to crush it. The way these are tested, is by placing them on bearings, 7 inches apart, and the breaking weight is applied to the middle of the brick. We shall be glad if, in your next, you will be kind enough to correct this, your remarks referring to the capability of bricks to resist a crushing force. These experiments have been made long since. *We* refer solely to the *lateral* strength of the brick, and we are not aware that up to this time any experiments have been published relative to bricks so tested. It is important that it should be stated in its true light. We know of no brick which will bear the same pressure: the average of twenty-five only has been given. Several were upwards of 3,600 lbs. and one of them sustained a pressure of 3,733 lbs.—T. and W. F. Beale.

*** The patentees should have stated their experiment differently.

Baths, &c. in Berlin. Baths and wash-houses on the model of those at St. Martin's, are in course of erection at Berlin. The fittings in the first-class rooms are of pale apple-green enamelled slate. Those in the second-class rooms, swimming-bath, drying-rooms, &c. are of plain polished slate. We are informed the whole of the slate work is being executed at the Pimlico Slate Works. It must be gratifying to the proprietor, Mr. Magnus, to see his invention of enamelling slate adopted by almost every architect of eminence at home, and gradually finding its way into works of magnitude on the continent.

False Certificates and Dishonest Appropriation of Money.—Proceedings have recently taken place in the Court of Bankruptcy, in Basinghall-street, City, which we would much rather pass over in silence were it not that honesty itself demands a record of it in our pages. Mr. Wallen, a surveyor, or as he is called in the bankruptcy proceedings, "an architect, surveyor, and builder," of Lawrence Pountney-lane, City, has been declared bankrupt, with this blot upon his name, that the Judge, Commissioner Evans, declares the bankrupt to have been "guilty of a gross fraud," and "of getting money (500*l.*) on false certificates" as to work done, and which money he appropriated to expenditure, on his own part, in itself unjustifiable, instead of paying it over to another to whom it ought to have been paid. The bankrupt's certificate was, therefore, adjourned for one year, and, when granted, to be of the third class; protection also to be suspended for six months. A certificate of execution was also granted to the gentleman, Mr. Liddell, to whom the 500*l.* ought to have been paid, and who had been compelled to give a mortgage for 340*l.* in an action by Mr. Durant, who had paid the money to Wallen.

Quarrying.—An experiment has just been made at Nitshill, near Glasgow, which promises, it is said, to introduce an improvement in the art of quarrying. Mr. Dove, a quarrier at Nitshill, had received an order from the Clyde trustees for a supply of large foundation stones for the new quay on the south side of the harbour. A post of rock, 52 feet long, 9 feet wide, and 7 feet 6 inches high, was operated upon. Behind it a row of holes was drilled down at about 7 feet apart, and the whole depth of the post. Each of these was charged with about 7 lbs. of gunpowder, and all were fired simultaneously by electricity. The whole mass was shoved forward about half an inch, and lifted so much off its bed that the smoke of the powder was seen escaping from below. The quantity raised was about 250 tons in weight, and this with only 14 lbs. of powder. The battery used for firing the train had had thirty-six pairs of plates, 10 feet by 12 feet. A mass of rock, 3,000 tons in weight, was next prepared to be operated upon in the same way, but we have not heard of the result.

City Crossings.—There are some of our street crossings which are extremely dangerous after dark, and accidents are constantly occurring. Going from the City to West-end daily, the first passage I have to make is from Fenchurch-street to Lombard-street, which, on a slippery night, is not accomplished without difficulty. Then comes the bewildering pass to get to the Mansion-House. Here I often see ladies waiting hopeless and helpless, until some one politely volunteers to "put" them across. St. Paul's offers the next puzzle, and your mind is not easy until you have done Ludgate-street and Fleet-street. A bridge was proposed over these places, but the plan has difficulties. I would suggest that as the danger is most seriously felt after dark, a flood of light should be brought to bear on all important crossings. I do not consider myself rash or incapable, but I have frequently been nearly run over at these places, for the simple reason that the want of light has prevented me from seeing the presence of danger.—G. C.

New Motive Power.—A series of experiments with M. Du Tremblay's system of employing ether in conjunction with steam on board steam-vessels, and thereby, it is said, obtaining a great increase of motive-power, at less expense than that of steam by the existing system, were made lately at Toulon, on board a vessel called the *France*, which had been supplied with the necessary engines. These experiments are reported to have been attended with perfect success. The average speed obtained is said to have been nearly nine knots an hour, with a saving of fuel compared with the existing system of 50 per cent.

Glass a Substitute for Marble.—An American, we hear, has invented a process by which glass is made to perfectly resemble, and answer all the purposes of marble, at 50 per cent. less cost. Centre tables, mosaic floors, grave slabs, monuments, and even statuary as per mould, are the alleged fruits of this process. "The quarries of Carrara," says the *New York Churchman*, "can yield no more delicately-veined blocks: the sand that lies in the bill side, the open field, or out on the beach yonder, touched by the inventive genius of our age, becomes marble."

New Fibrous Materials for Paper Manufacture.—Ever since some paragraphs on the scarcity of paper material appeared in our columns, we have had occasional communications offering suggestions and enclosing specimens of materials. The latest of these latter has been forwarded to us by a correspondent at New Orleans, Mr. Walter Carswell, who appears to have patented its adaptation to paper manufacture, and is desirous to bring it into notice. To this end Mr. Carswell forwarded specimens to our Government, who referred the matter to the Board of Inland Revenue, the latter of whom appears to have reported favourably of its felting and other adaptabilities to paper manufacture, but the Government declined, as a matter of course, to interfere with actual production or trading operations. So far as regards ourselves, not being brokers we cannot entertain Mr. Carswell's proposals as to "brokerage," but we are willing to afford him the benefit of our circulation in assisting to bring the material referred to into notice. It consists of masses of strong and tough flax-like fibrous matter singularly matted together, or "anastomozed," as a physiologist would say, were it a mass of blood-vessels instead of vegetable fibres. We have examined the fibrous structure with a microscope, and find that it would appear to be easily reducible to very fine filaments, which, from their curiously interlaced arrangement, even as they are, we are disposed to think the report of the Board of Inland Revenue right in believing to possess a felting property adapted to paper manufacture. The Board have some doubt as to its bleachable quality, but they had it tested only with acids, whereas Mr. Carswell finds that alkalis do bleach it, and we have little fear but that chemists would find no difficulty with it in this respect.

Telegraphic.—A Dublin merchant has obtained a verdict for 20*l.* damages against the Magnetic Telegraph Company for failing to send a message which they undertook to transmit to a person in Scotland. The case for the defence was that their contract in this instance, as in all cases, was to be subject to casualties arising from the state of the weather; and that on the occasion in question, owing to that cause, they were unable to send the message further than Belfast.

Survey of the Township of New Brentford, Middlesex.—At the meeting of the Board of Guardians, Brentford Union, on the 27th ult. Mr. Paine was appointed to the survey of the parish and township of New Brentford, subject to the approval of the Poor-Law Board.

Death from Fall of a Roof at Brierly-Hill.—On Wednesday before last, a girl was killed by the falling-in of an arched brick roof of a smoking-house, at a small pottery at the Thorns, near Brierley-hill. The deceased, with some four or five other persons, including the owner, was engaged in the smoking-house, a place about 12 feet long and 8 feet wide, with an arched roof probably 10 feet high, when, from some cause at present unexplained, the roof suddenly fell in, burying the deceased, and severely injuring a man who happened to be there at the time.

TENDERS

For wood-work required in the erection of a shed at Batley, near Dewsbury. Mr. M. Sheard, jun. architect.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, or from the mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the evil may be realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B MORLEY and CO. and by the Company's Grinding Agents in London, Messrs CHARLES DEVAUX and CO., Wholesale Agents, 62, King William-street, City; JACK and BRABY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool by Messrs. LAWFORD and CO. of 48, Norfolk-street, Liverpool, who are also sole wholesale Painters to the Company for Zinc Paints, and undertake painting shops, warehouses, dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 13, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their Painters, who will be ready to execute any description of Painting and Decorating with the Pure Patent White Zinc Paint.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, and Seel street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENT, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Rugate, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portolanno.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery patented by Mr. ASPDIN, much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper

A report of experiments made to prove the extraordinary strength of their Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharf, Holland-street, Blackfriars, Ransland Bevin, and Manchouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall Potter, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for such works as all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the assertion put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are ineluable to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

PORTLAND CEMENT.—D. MOUNTAGUE begs most respectfully to inform the numerous Architects, Contractors, Builders, &c. who have for the last thirty years patronised his Roman Cement, Plaster, and other manufactures that he is now enabled to supply them with a very superior Portland Cement, warranted to with-stand the action of heat, frost, &c. and of uniform colour and quality. Orders received at Patent Cement Wharf 80, Bankside, Southwark, Harrow-bridge Wharf, Stratford, Essex; and at the Cement Manufactory, Orchard House, Blackwall.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the Building Trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for building in wet and damp situations, such as wharf walls, docks &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS, STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil cloth coverings; for entrance-halls, passages, conservatories, &c.

MAW and CO. send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC" is the exclusive right of Mr. Peake, Potter; and, thirdly, that the "REPORT OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 35s. at WARD'S OLD-ESTABLISHED HONDURAS WHARF, BANKSIDE, London Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods. Fire Bricks, Lumps, Tiles and Clays. Patent Malting and Corrugating perforated Tiles, real Dutch Clinkers; River sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate. Chief Office, 27, Regent-street.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Malms of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS COWLEY, KENT, and ESSEX BRICKS. Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c. KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business is removed to Cowley Brickfields, Uxbridge-road, Newington butts, will, from MONDAY, the 31th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICKS for OVEN-BUILDING, acknowledged the best for that purpose, delivered, 30s. to London-bridge or Newington; beyond that distance, moderate charge carriage. Bricks of all description; yellow and light pickings, equal to seconds. Red facings, at 30s. in field; red and glazed pigs, about half the price of stoneware; white sand, nearly silver, in field or by barge, founders' sand and loam; good coloured gravel.—Address, B. PARIS, Lewisham Brickfields.

BRICKS.—KENT GREY STOCKS on SALE. Also PATENT PERFORATED, and SOLID WHITE SUFFOLK FACINGS. Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

TO BUILDERS.

TO BE SOLD, cheap, the capital STOCK-BRICKS of a mansion, either in one lot, or at per thousand, as the ground must be cleared immediately. For particulars, inquire on the Premises, corner of Vernon-place and Bloomsbury square, Holborn.

GREAT NORTHERN WHARF, York-road, King's-cross. WHITE BRICK and TILE DEPOT. L. SPEARING and SON, Brick, Tile, Lime, and Cement Merchants, beg to inform builders, contractors, and the building trade generally, that they have now on sale at the above wharf, Cowley stocks, grizzles, and place; white cutters, seconds and paviors; oinkers, red cutters, and stocks; plain and pan tiles, 6 in. 9 in. and 12 in; white and red paving tiles; blue, red, and white ornamental tiles, blue and red ornamental ridges; Stourbridge, Welsh, and Yorkshire fire-bricks, lumps, tiles, and clay; ornamental and other wall copings; Bangor and other slates; stoneware sewer-pipes, bends, junctions, and syphons; closet-pans and traps, terra-cotta chimney-tops, trusses, brackets, vases, mouldings and patera of the most elegant designs, worked to with accuracy and despatch. Lump and ground grey stone lime, chalk lime for plastering, blue lias lump and ground lime, Roman, Portland, and lias cements, coarse and fine plaster, laths and hair.

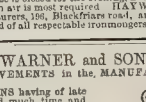
N B —30,000 bundles of prime Gothenburg laths are now on sale at the above wharf, price 8s. per load.

GREAT NORTHERN RAILWAY.—L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross, beg to inform builders, contractors, and others who are engaged in works at or near any of the stations on the above line of railway, that from time to time be supplied upon the shortest notice with Bricks, Tiles, Lime, Cement, Sand, Plaster, Drain-pipes, Fire-goods, and all other building materials of the best quality at the lowest market prices.

N.B. Orders received overnight can be delivered by the early morning trains.

TO CONTRACTORS, BUILDERS, and OTHERS. TO BE SOLD, from 100 to 500 YARDS of SAND or BALLAST, lying at Hoxton, about one mile from the City, at a very moderate price. Likewise, some good Garden or Stable Sand.—For particulars apply to Mr. CASE, 32, Minterstreet, New North-road, Hoxton.

A. KING, WORKING UPHOLSTERER, 35, University-street, Gower-street.



SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS by SUTER'S PATENT WIND GUARD. This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney and will not be found to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.) SOURSE and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an EXTERNAL WALL

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars road, and 12, Union-street, Borough; and of all respectable ironmongers, builders &c.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the, MANUFACTURE of LARGE BELLS

J. W. & SONS having of late years devoted much time to study the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

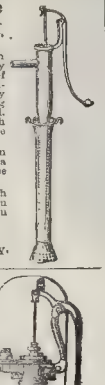
TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closet and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

FOWLER'S IMPROVED

WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to double 15-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S

ENGINE-PUMP MANUFACTORY,

Whitefriars-street, Fleet-street, London.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and gudgeons are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 30 feet; also, Garden Engines constructed on the same principle.

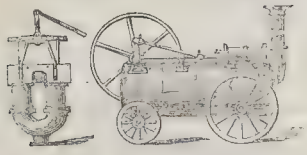
JOHN WARNER & SONS,

8, Crescent, Jewin-street, London,

Manufacturers and Patentees.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, mines, forges, well sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.



PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 15 in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by Land, Horse, or engine power.

Iron Pails 38s per doz. painted.
Ditto .... 48s per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

PORTABLE STEAM-ENGINES and PUMPS

kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars Bridge (Surrey Side).

STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water

JAMES BURTON & SONS,

Engineers and Contractors,

John's-place, Holland-street, Southwark, London.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES,

mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALL'S, Engineers and Portable Engine Makers, 93, Blackfriars-road. These engines have been successfully employed for years.

TARPAULINS for COVERING ROOFS

during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

PAVING, 2s. 9d. per SQUARE YARD.—

Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. Country Agents, and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE.—GERVASE FOOTTIT,

Trinidad Asphalte Works, Rotherhithe; established 1834

Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 30s. per ton

Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G H CLARK, Agent.

PATENT SANITARY GAS SHADES.—

These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Crispin-street, Spitalfields, London.

ROYAL POLYTECHNIC INSTITUTION.

Grand Juvenile Fetes and Gratuitous Distribution of the Ornaments of two splendid Christmas Trees

In consequence of the disappointment of those who could not obtain admission on the evening of Wednesday last, it is respectfully announced that two more opportunities will be afforded to our young visitors. Splendid Optical Diorama of Sindbad the Sailor, Davis's Ingenious Marionettes, Parlour Magic, and Leger-de-main, by Mr. Burrman, and the interesting Views of the War, &c &c.

Admission, One Shilling; Children under Ten, Half-price. Open from Twelve to Five. Evenings, Seven to Ten.

COLOSSEUM, Regent's-Park.—Admission,

1s.—The original PANORAMA of LONDON by DAY, is exhibited daily, from Half-past Ten till Five. The extraordinary PANORAMA of LONDON by NIGHT, from Seven till Ten. Music from Two till Half past Four, and during the evening.

CYCLORAMA, Albany-street.—Now Open.

with a COLOSSAL MOVING DIORAMA of the CITY and BAY of NAPLES, MOUNT VESUVIUS, and POMPEII, exhibiting the Great Eruption of 79, and present state of the excavated City, painted by Mr. McNevin, from sketches taken by himself in 1852. Daily at Three and Eight o'clock, with appropriate music and description. Admission, 1s. Children and Schools half-price.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-

HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building.

Price from 8s. 6d. each, according to size.

IRON GIRDERS and COLUMNS to MODEL or DRAWING.

IRON PIPES and connections for gas, water, and liquid manure.

RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, Oak Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London near Blackfriars-bridge.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT,

has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER

THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

ANCIENT HOUSE FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. CRACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Bauderkin.

CARPETS, plain or in rich Velvet pile, with appropriate Borders.

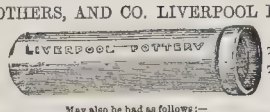
PAPER-HANGINGS of various kinds.

OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and approp riate Furniture

The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.

To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with it ancient character.

14, Wigmore-street, January, 1853



DOULTON AND WATTS,

LAMBETH POTTERY, LONDON.

REGISTERED CLOSET-PANS IN ENAMELLED STONE WARE.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S.

STONE WARE PIPES, BENDS JUNCTIONS TRAPS, &c.

TERRA COTTA VASES, CHIMNEY-TOPS, &c. FIRE-CLAY FLUE PIPES.

May also be had as follows:—

BLACKBURN....W. Hopwood, Clayton-street.	

The most economical and efficient system of drainage is formed with DOULTON'S STONE-WARE PIPES.

Testimonials as to their superiority have been received from the Borough Engineers of Liverpool, Glasgow, and other cities.

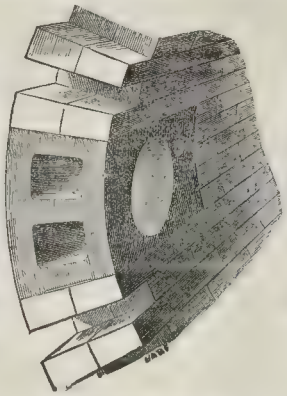
HENRY DOULTON AND CO.'S

PATENT SEWER JUNCTION BLOCKS AND INVERT BLOCKS,

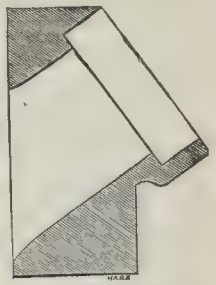
IN GLAZED STONE WARE,

HIGH-STREET, LAMBETH, LONDON.

The connection between pipe drains and sewers, and brick sewers, is made perfect and secure by the use of DOULTON'S PATENT JUNCTION BLOCKS. Each block is made to correspond in thickness with the sides of the brick sewer, so as to build or bond in with the brickwork; the inner surface is made to correspond with the internal figure of the sewer. Each block has a socket, either within its thickness or just protruding beyond it, to receive the end of a pipe. They are made to receive pipes, entering either straight or obliquely. When fixed they form part of the sewer, they cannot be improperly placed, and a certain and proper fall is secured at the point where the junction is made.

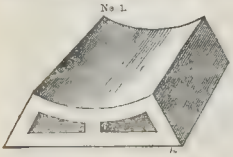


THE PATENT JUNCTION BLOCKS MAY BE FITTED WITH METAL FLAP-TRAPS IF REQUIRED.



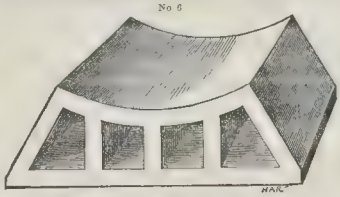
Egg-shape Sewer, with
DOULTON'S PATENT JUNCTION AND INVERT BLOCKS.

Section of
STRAIGHT JUNCTION
BLOCK.



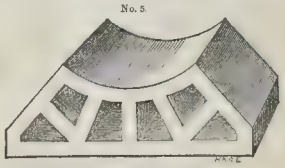
JUNCTION BLOCK as fixed in Sewer.

Section of
OBLIQUE JUNCTION BLOCK.



DOULTON'S INVERT BLOCKS, in stone ware, form a glazed, even, and imperishable surface for the bottoms of brick sewers, and also a sure foundation for the structure. They have been used extensively by the Metropolitan and City Commissioners of Sewers, and for the main sewers in many provincial towns, and in all cases have been highly approved by the engineers, both for the facilities they offer in the construction of sewers, and for their subsequent action in permitting an easy and uninterrupted flow of the sewage matter. They offer the means for carrying off all superfluous water while the sewer is in course of construction, and when required give a channel for land drainage independent of the sewage.

No. 1.



Radius of Invert 9" for 18" Circular Sewer, or 2 ft. 6 in. by 2 ft. 6 in. Egg-shape. 4½ in. work.

No. 6

Radius of Invert 15" for large Egg-shape Sewer. 9 in. work.

No. 5.

Radius of Invert 9" for 3ft. 9 in. by 2ft. 6 in. 6 in. work.

A full description, with sizes and kinds of both Junction and Invert Blocks, forwarded on application, per post.

TO SANITARY COMMISSIONERS, SURVEYORS, ARCHITECTS, BRASSFOUNDERS, PLUMBERS, BUILDERS, ENGINEERS, &c.

MAYER, BOULTON, AND CO.

This is the only Manufactory in the Kingdom for the exclusive production of Plug Closet, Sanitary, and Lavatory Basins of all descriptions.

M. B. and Co. having an intimate knowledge of, as well as a practical acquaintance with, this peculiar business, can manufacture cheaper than any other house. They invite especial attention to their

DRAB HOPPER BASIN AND TRAP, AT 7s. 6d. EACH,

Delivered in any part of the kingdom;

AND WHERE LARGE QUANTITIES ARE REQUIRED, A LIBERAL DISCOUNT IS ALLOWED.

Orders for White, Drab, Marbled, Blue Printed, Enamelled, and Gilt Goods attended to on the shortest notice.

LONDON DEPOT—18 WHARF, CITY-BASIN;
FLINT AND STONE MILLS, FRAMPTON COTTERELL;
AND THE SANITARY POTTERY NAILSEA (Late Counthupes and Co.)

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by KANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS which they can recommend as being made in the best manner, Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 8d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852. In answer to your inquiries respecting the gutta percha tubing for pumps, etc., I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed and a more perfect job. Yours &c. C. Hacker." N.B. The Company's Illustrated Circulars containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster have just ISSUED a PAMPHLET, descriptive of various Patented Inventions for the Permanent Way of Railways which are adopted and are being applied to more than 3,000 miles of line. On application, a copy will be forwarded by post (gratis) to any parties who are interested in the construction of railways. WILLIAM HOWDEN, Sec.

TO ARCHITECTS, SURVEYORS, BUILDERS, CONTRACTORS, AND OTHERS.

MESSRS. CHANY beg to call attention to their Large Stock of Water-closets, spring valve and common, Glazed Hopper Basins, Traps, and all articles used in sanitary improvements.—N.B. Plumbers' Brass-work of every description.—34, Clifton-street, Finsbury-square.

JENNINGS'S PATENT DRAIN-PIPES
REMOVE THE OBJECTIONS TO PIPE-DRAINAGE.

At the Institute of Engineers, during the discussion on Pipe-drainage, Mr. Robert Stevenson, when speaking on the subject, said, "He looked upon the Pipe-drainage of a Town as one HUGE MACHINE, *that was neither capable of Examination nor Repair."*

THE OLD FASHIONED AND HALF-SOCKET PIPES CANNOT BE EXAMINED without taking up one or more Pipes, thus DESTROYING THE LINE OF DRAINAGE, and saturating the sub-soil.

Practical men will see, by comparing JENNINGS'S DRAIN PIPES with the Half socket Pipes, that the former can be examined, by simply excavating down to, and removing one of the saddle-pieces.

To remove a Half socket Pipe the excavation must be THREE TIMES AS LARGE, and the relaying of the Pipes, or making the Joints (OWING TO THE ESCAPE OF SEWAGE) a matter of much difficulty.

JENNINGS'S PIPES can be examined without checking the flow of sewage, or disturbing the invert or general drain, and junctions can be introduced at any joint, by removing a plain saddle, and exchanging it for a saddle having a junction formed in it of the required size.

By the use of JENNINGS'S PIPES, the work of supervision is lessened, and good work ensured, as any length of Pipes may be laid, which can be examined at the convenience of the superintendent before the saddle-pieces.

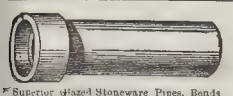
The favour with which these Pipes have been received, has induced the Patentee to commence the CONSTRUCTION OF THE LARGEST PIPE-WORKS IN THE WORLD; and, by the aid of screw-steamers and railway facilities, every Town in the United Kingdom will shortly be supplied with these Improved Pipes, SAME PRICE AS ORDINARY SOCKET-PIPES.

A List of Agents will then be published.

To meet the views of all interested in Sanitary Progress,
GEORGE JENNINGS PROPOSES TO MANUFACTURE THE OLD-FASHIONED SOCKET-PIPE GLAZED AND UNGLAZED.

AS ALSO
A VARIETY OF USEFUL ARTICLES IN EARTHENWARE, HITHERTO NOT ATTEMPTED.

JENNINGS'S PATENT CLOSETS, TRAPS, SLUICE-VALVES, &c.
ARE FREE FROM ALL COMPLICATION.—NO WIRES OR CRANKS.



ANY NUMBER OF CLOSETS SUPPLIED FROM ONE SERVICE-PIPE, AND THEY ARE AS READILY FIXED AS A COCK TO A SINK, UNDER HIGH OR LOW PRESSURE.

Architects furnished with references of the highest order.

ALEX. ROBERTSON, Manager.

INSTITUTED 1831

SCOTTISH EQUITABLE MUTUAL LIFE ASSURANCE SOCIETY.

Incorporated by Royal Charters and Special Act of Parliament.
Head Office—EDINBURGH, 28, St. Andrew-square.
Manager—ROBERT CHRISTIE, Esq.
LONDON—126, Bishopsgate-street, Cornhill

The SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY is an Institution peculiarly adapted to afford provision for Families. It was established in the year 1831, upon the principle of MUTUAL CONTRIBUTION, the Surplus or Profit being wholly divisible among the Members; and the Additions which have been made to Policies at the Periodical Investigations of the Society, afford satisfactory evidence of the prosperity of the Institution, and the present position of the Members. The following Examples exhibit the Additions already made:—

A Policy for £1,000 opened in 1832 is now increased to £2,242 8s
A Policy for 1,000 opened in 1836, is now increased to 1,421 16s 2d
A Policy for 1,000, opened in 1840, is now increased to £1216 13s 2d

The Profits are ascertained and divided triennially among Policies of more than five years' duration.

The Sum Assured is upwards of £10,000,000.

The Amount of Assurances in force is upwards of Four Millions and a Quarter Sterling.

The Amount paid to the Representatives of Deceased Members exceeds £600,000 sterling.

The Total Amount of Vested Additions allocated to Policies exceeds £1,200,000

The Accumulated Funds is upwards of £1,200,000

Loans granted to Members to the extent of the Office value of their Policies.

Copies of the Annual Report, Forms of Proposal, and all information may be had on application at any of the Society's Offices in town or country.

ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.
W. COOK, Agent.
126, Bishopsgate-street, London.

January, 1865.

THE ALBERT ASSURANCE COMPANY.

(Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security. EASTERN BRANCH 7, Finsbury-square. W. S. VARDY, Manager.

MITRE GENERAL LIFE ASSURANCE and ANNUITY ASSOCIATION. No. 33, Pall mall, London. Established 1845; with which is united the Business of the Mitre Assurance Office, late of 41, Moorgate street. Protective Capital, £100,000.

This Society offers the option of Mutual Assurance with Share of Profits; or of very moderate rates under the guarantee of a large protective capital.

The profits are either added to the policy, or paid in cash, or go to reduce the annual premium; while in the Metropolitan Branch, the low rates, as compared with those of pure mutual offices, are equal at birth to an annual bonus of from 30 to 40 per cent. of the amount assured. IN Premium for assuring £100 at age thirty-nine, £2 19s. 3d. Average premium of mutual offices, £3 5s. Annual saving, £5 5s. 9d. equivalent to a bonus of £131 5s. 7d.; or £10 to a policy of £252 5s. 7d.

Annuities granted by this Mitre increase per cent. on the mutual system. All expenses of the annuity office are defrayed by the Association.

More detailed information will be readily furnished on application, by letter or otherwise, to the Secretary, at the Mitre Life Office, No. 33, Pall-mall, London.

Active agencies are invited in such districts as are not already represented. Remuneration liberal.

January, 1865. WILLIAM BRIDGES, Secretary.

Insurances against loss by fire are effected by the PHŒNIX COMPANY upon every description of property, in every part of the world, in the most favourable terms.

Persons insuring with the Phœnix Company are not liable to any call beyond the losses of others, as is the case in some offices.

Insurances with this Company expiring at Christmas must be renewed within fifteen days thereafter, or they will become void

Receipts are now ready at the principal Offices, Lombard-street, and Charing Cross, and with the respective Agents throughout the United Kingdom.

EXTENSIVE PREMISES in the CITY of LONDON.—The Trustees of Parish Estates will meet in the Vestry-room of the Church, on FRIDAY, the 2nd of FEBRUARY next, at SIX o'clock in the evening, to receive TENDERS for taking, on a lease for twenty-one years, the spacious Premises situate on the west side of Aldergate street, at present used as a Workhouse by the Guardians of the East London Union. The buildings are well lighted, and three stories in height, with a dwelling-house and paved court-yard. From the close proximity of this property to the improvements now in contemplation by the extension of the Money Accommodation to the general public, it will be considerably enhanced in value.—For further particulars, and cards to view, apply to Mr. BLYTH, Surveyor, 114, Aldersgate-street.

TO BE LET or SOLD, several PLOTS of FREEHOLD BUILDING LAND, extending 800 feet frontage, eligibly situated at Peckham, Surrey, on the Hill adjoining the Rye, with a commanding view of the surrounding country, and within sight of the Crystal Palace; the same to be Let or Sold together, or separate, on most reasonable terms.—Plans of elevations, &c. may be seen, and further particulars obtained, on application to Mr. S. SPONG, 3, Grove-street, Camden-town.

BUILDING-GROUND, BRIGHTON.—

TO BE LET, a very eligible FRONTAGE for THREE or FOUR HOUSES in Broad street, immediately contiguous to the Marine Parade and Chain pier, where houses are much in request. Full particulars and terms may be obtained of Messrs. LUCKWOOD, Surveyors, No. 41, Upper Baker-street, London

LYDSTEP HAVEN, PEMBROKESHIRE.

TO CAPITALISTS, BUILDERS, and OTHERS.—A rare and first-rate BUILDING ESTATE TO BE LET, for a long term of years, or on lives from Michaelmas next, about SEVEN ACRES of LAND, replete with lime and building stone, and other advantages, rendering the erection of houses of comparatively trifling expense, and of a character quite in keeping with the regular merits of the times. Lydstep Haven is situate in a most romantic bay, within half an hour's drive of Tenby, which popular watering-place now overflows with visitors. This must a advantageous building investment is equal to freehold, and picturesquely slopes down to the beautiful bay, whose shore is admirably adapted for sea bathing. The rocks of Lydstep are bold and romantic. The heights of the island of Caldy present an unbroken and beautiful feature of interest from Lydstep Haven, whose climate is the same as that of Tenby. Greenhouse plants, without shelter, thrive and blossom almost out of doors. The water-supply between Bristol, Tenby, and Ireland, all cheap, swift, and pleasure in addition to and from the charming bay, whilst close to the Haven itself a regular Lydstep Haven boat calls. The road is safe, and easily reached from the far inland by the pain road to. For terms and every information, apply to WALTER AUGUSTUS HOLCOMBE, Esq. Solicitor, &c. Canterbury-place, London.

ST. MARGARET'S, near RICHMOND.—

A few most eligible SITES for VILLAS, with frontage to the Terrace, and other roads, suitable for villas of all classes, TO BE LET, on Building Lease. Money advanced to respectable builders.—Apply to GEORGE MORGAN, Esq. Architect, 3, Chancery-lane; or to Mr LONG, Richmond, Richmond

TO BUILDERS AND OTHERS.

TO BE LET, on lease, a capital DWELLING-HOUSE, with commodious Carpenters' Work-shops, Drying Sheds, &c. in the rear, situate in Upper Camden-place, Peckham. For particulars, apply to Messrs. F. and E. EDWARDS, Architects, No. 7, Harpsford, Bloomsbury. Mr. FIELD, No. 11, Upper Camden place, Rosemary Branch lane, Peckham; or on the Premises, which can be viewed on application.

TO BUILDERS, FREEHOLD LAND SOCIETIES, AND OTHERS.

TO BE LET, on building lease, for a term of ninety nine years, or SOLD, about THREE ACRES of FREEHOLD LAND, peculiarly adapted for the erection of third or four-rate houses, and situated about ¾ miles from Westminster-bridge, in a locality where dwelling-houses of the class contemplated are in demand. The property is most eligibly let from the freeholder. Also, a detached VILLA, adjoining the above, containing ten rooms, with stable and offices, and about half an acre of garden, at present let to a highly respectable tenant. To be sold either separately, or in connexion with the above. For particulars apply to Messrs. WEBNERT and ASHDOWN, Architects, 13, Charing cross.

TO BUILDERS, CABINETMAKERS, and OTHERS. TO BE LET, desirable PREMISES, in good repair, comprising dwelling-house, with workshops, and other buildings, and about 1 acre of land, in the neighbourhood of Bedford row. For further particulars apply to Mr LUKEW, Auctioneer and Valuer, 2, Carlington street, Hampstead-road.

EXTENSIVE MANUFACTURING PREMISES LAMBETH.—TO BE LET, those very commodious and valuable Premises known as the LAMBETH STARCH WORKS, situate in Princes-street, Lambeth, with all the requisite waterside wharves, or granaries attached. These premises are in every respect adapted for carrying on any manufacture, trade, or business of a large and extensive character, with facilities of railway and water conveyance.—Apply to Mr ROGERS, Surveyor, 13A, Cannon-row, Westminster, or Parker chambers, Old Lambeth; Mr J. R. PEARS, Solicitor, Old Jewry-chambers, Lambeth; or to Messrs. HODGSON and BURTON, 10, Salisbury street, Strand

WANTED, good light-work PREMISES, with Dwelling, within three miles of Holborn.—Address, by letter, stating full particulars, to BARK CHIDLEY, Concertina Manufacturer, 155, High Holborn.

TO BUILDERS, OF SMALL CAPITAL.

TO BE SOLD, for finishing, the CARCASES of several EIGHT ROOMED HOUSES, some with shops, in one of the most improving suburbs of London. Money advanced for finishing, and the whole of the purchase money need may remain on mortgage if required.—Apply, personally, to Mr. ROBERT GRAY, 1, Southampton street, Strand.

TO MASONS, BUILDERS, &c.—TO BE DISPOSED OF, the BUSINESS of a MASON and BUILDER lately occupied many years and carried on by the late owner; with commodious premises, situate in the vicinity of Edgware road; three rooms, 21, Mount-street, Grosvenor-square. The stock, &c. to be taken at a valuation.—For particulars, &c. apply at 21, Mount-street.

TO PLUMBERS, PAINTERS, AND GLAZIERS

TO BE DISPOSED OF, the LEASE and GOODWILL of an established BUSINESS, in the above lines. Lease 3½ years at £45 per annum, rates, and taxes. The whole of the stock, &c. at a valuation.—For further particulars, apply to Mr. READ, 2, Carrington-place, Piccadilly. Price, 170.

NOTICE.—MEMBERS of FREEHOLD LAND, BUILDING SOCIETIES, and OTHERS having LAND or HOUSES TO DISPOSE OF, can forward particulars which will be inserted on MONDAY NEXT, free of any additional commission, to Messrs. POOLE and COMBS, Auctioneers, Valuers, and House and Estate Agents, 79, Bishopsgate-street Within, London

TO ENGINEERS, MILL-OWNERS, CONTRACTORS, AND OTHERS.

AUGUSTUS SMITH, Auctioneer, Valuer, &c. 253, Blackfriars-road, two doors from Holland-street, having had seventeen years' practice in the selling and valuing of all kinds of engines, machinery, implements, and engineering tools, plants, &c. respectfully solicits a share of patronage in the above line. The most satisfactory references given if required, and all accounts settled the day after delivery; also a free registry kept of all engines, boilers, and machinery for sale by private contract

MR. ROBERT KENYON'S "NINTH" IMPROVED BUILDING SOCIETY.—NOTICE.—

Stood will be offered to the borrowers at the FIRST MEETING, which will be held at the OFFICE, on MONDAY, the 23rd JANUARY, 1865, at Burlington-hall, No. 21, Saville-row, Regent-street, from SEVEN to NINE o'clock. Interest payable by the borrowers from the period of the first term of ten years. Law charges fixed. The whole of the purchase-money advanced

ROBERT KENYON, Manager.

COMPETITIONS.

TO ARCHITECTS.

THE DIRECTORS of the BRIDGNORTH PUBLIC BUILDINGS and MARKETS COMPANY, are desirous of receiving DESIGNS and ESTIMATES for the ERECTION of PUBLIC BUILDINGS, to include accommodation for the butchers, fish, vegetable, poultry, butter, and other markets, a large room for lectures, and music, reading-room, and rooms for the sitting of the magistrates. A premium of £20 will be given for the most approved design, and £10 for the next best five £5 not to be paid for the most approved plan, if the person drawing that plan should be employed as architect in the execution of the buildings. The drawings and estimates must be delivered at the Office of Mr. GORDON, Solicitor, Bridgnorth, the Secretary, on or before TEN o'clock a.m. on SATURDAY, the 3rd day of FEBRUARY next, from whom a plan and section of the intended site may be obtained, together with any particulars that may be required upon payment of five shillings.

TAUNTON, SOMERSETSHIRE.—To ARCHITECTS.—NEW ASSIZE COURTS, HOUSE for the JUDGES, and RECORD ROOMS and OFFICE for the CLERK of the PEACE.—PLANS, ELEVATIONS, and SECTIONS for the above are required, with SPECIFICATIONS and ESTIMATES: the total cost thereof, including all fittings and fences, not to exceed 16,000*l.* A premium of 50*l.* and one of 25*l.* will be given for the best and second best plan respectively, if not finally adopted. The drawings to be of an uniform scale of 8 feet to an inch, and to be sent with a motto attached, and a sealed letter, with the name and address of the architect within, and the motto on the cover, to the Clerk of the Peace, Wells, Somerset, on or before MARCH 10. A plan and section of the site will be furnished, on application to Mr. CARVELL, County Surveyor, Taunton.

THE WATFORD CORN-EXCHANGE COMPANY are desirous of receiving DESIGNS for their intended EXCHANGE BUILDING and APPROACH thereto. The plans to be drawn to an uniform scale of one-tenth of an inch to the foot. The perspective must not be coloured. The cost of the outlay not to exceed 1,000*l.* The architect whose design shall be considered as the best will be employed to carry out the works at the usual commission of 5*l.* per cent. The author of the second best plan in the opinion of the provisional directors will be awarded the sum of Ten Guineas. The plans to become the property of the provisional directors. No allowance will be made whatever to any other competitor. The drawings to be sent in under a motto, and be delivered to the Secretary, Mr. J. SEDGWICK, Solicitor, Watford, on or before the 1st of FEBRUARY, 1855; from whom, or Mr. HUMBERT, Surveyor, Watford, all necessary information may be obtained, by personal application only.

CHESTERFIELD MARKET-HALL and PUBLIC BUILDINGS.—The Contributor of Designs for these buildings distinguished by a circle, intersected with three diagonals, is requested to communicate his name and address to the Secretary, no sealed letter having accompanied the designs thus marked.

GEO. WALLIS, Secretary.
Chesterfield, 8th January, 1855.

COMPETITIONS.

TO ARCHITECTS.

£5 PRIZE, ABERYSTWYTH.—The Commissioners of this Town are desirous of obtaining DESIGNS for a CLOCK-TOWER, which they purpose erecting on a suitable site; the base not to exceed an area of 14 feet square, and the outlay limited to 200*l.* The above prize will be given to the candidate whose design and specification shall be approved of and selected. Unsuccessful competitors will receive no remuneration, but their drawings will be returned to them.—Plans, &c. to be sent to me, the undersigned, before the 30th JANUARY, 1855.

W. H. THOMAS, Clerk to the Commissioners.
Laura-place, Aberystwyth.

ALL Persons desirous of furnishing Proposals for HEATING the "BRUEN TESTIMONIAL CHURCH," Carlow (will receive full particulars by applying by letter, prepaid, to J. M. DERICK, Esq. Architect, New Church, Carlow.

CONTRACTS.

EXTENSION of TIME for RECEIVING TENDERS.—Sunderland Dock Company. To ENGINE BUILDERS, MILLWRIGHTS, and OTHERS.—The Directors of the Sunderland Dock Company are prepared to receive Tenders for the CONSTRUCTION of a RAILWAY and CARRIAGE BRIDGE, to be placed across the sluice entrance to the Grand Dock. A plan and specification may be seen, and further information obtained, on application to the Engineer, or the Clerk of Works, at the Dock offices, Sunderland. Security will be required for the due performance of the contract. Tenders are requested to be delivered at the Dock Office, Sunderland, on THURSDAY, the 18th day of JANUARY next, not later than ELEVEN o'clock in the morning. The Directors do not bind themselves to accept the lowest Tender, and further reserve to themselves the power of rejecting all Tenders if not satisfactory.—By order,

M. COXON, Secretary.
Sunderland Dock Office, 3rd January, 1855.

CONTRACTS, 1855.—PARISH of SAINT GEORGE, HANOVER-SQUARE.—Such persons as are willing to CONTRACT with the Committee of Paving of the said Parish, for the MASONS' and PAVIORS' WORK, supply of Guernsey Granite Chippings and Yorkshire Paving, for one year, from the 25th of March next, may deliver in proposals, sealed up, at the Office of the Clerk of the Committee of Paving, at the Board room, Mount street, on or before MONDAY, the 26th day of FEBRUARY, 1855. Persons tendering are desired to take notice, that all proposals must be made upon, and strictly in accordance with, the printed Forms of Tender, to be obtained on application at the Clerk's Offices, as also further particulars, any day between the hours of TWELVE and ONE o'clock. The expense of the contract to be borne by the contractor, and the Committee will not be bound to accept the lowest Tender.—By order of the Committee of Paving,

T. B. CHAPPELL, Clerk.

CONTRACTS, 1855.—PARISH of SAINT GEORGE, HANOVER-SQUARE.—Such persons as are willing to CONTRACT with the Committee of Paving of the said Parish, for the SUPPLY of WORKMEN'S TOOLS and HAMMERS for STONE-BREAKING, and Repairs of the Same, as also for Iron Lamp-posts and Gas-fittings, for one year from the 25th of March next, are desired to deliver in proposals, sealed up at the Office of the Clerk of the Committee of Paving, at the Board-room, Mount street, on or before MONDAY, the 26th day of FEBRUARY, 1855. Persons tendering are desired to take notice that all proposals must be made upon, and strictly in accordance with, the printed forms of Tender, to be obtained on application at the Clerk's Offices, as also further particulars, any day between the hours of TWELVE and ONE o'clock. The expense of the contract to be borne by the contractor, and the Committee will not be bound to accept the lowest Tender.

By order of the Committee of Paving,
T. B. CHAPPELL, Clerk.

CONTRACTS, 1855.—PARISH of SAINT GEORGE, HANOVER-SQUARE.—Such persons as are willing to CONTRACT with the Committee of Paving of the said Parish, for the DISPOSING CARTS and HORSES for the WORK, Watering carts, and Carting away the Sludge and Sweepings from the Streets; also for the Purchase of the Cinders, Ashes, &c. &c. for one year, from the 25th of MARCH next, may deliver in proposals, sealed up, at the Office of the Clerk of the Committee of Paving, at the Board-room, Mount-street, on or before MONDAY, the 26th day of FEBRUARY, 1855. Persons tendering are desired to take notice that all proposals must be made upon, and strictly in accordance with, the printed forms of Tender, to be obtained on application at the Clerk's Offices, as also any further particulars, any day between the hours of TWELVE and ONE o'clock. The expense of the contract to be borne by the contractor, and the Committee will not be bound to accept the lowest Tender.—By order of the Committee of Paving,

T. B. CHAPPELL, Clerk.

TO BUILDERS.

TREGOTHNAN HOUSE, four miles from Truro, in the county of Cornwall.—The Drawings and Specification of work intended to be done on the ERECTION of LAUNDRY, STABLE, and COACH-HOUSE BUILDINGS, of considerable magnitude, near the above-named mansion, will be left for the inspection of the Contractors in the care of Mr. POOLE, the Clerk of the Works, on and after MONDAY, the 22nd instant. The quantities will be stated in the specification. Sealed Tenders must be delivered, free of cost or remuneration, before TWELVE o'clock on the 5th proximo, to the care of Mr. POOLE. The lowest Tender, or either of the Tenders, will not necessarily be accepted.—Tregothnan House, Jan. 4th, 1855.

TO BUILDERS.

TENDERS are required for ERECTING a semi-detached VILLA RESIDENCE, at Harrow, in the county of Middlesex. The drawings and specifications can be seen, and further information obtained, at the office of Mr. WM. JOHN PINCH, Architect, 31, Park-street, Westminster, on and after TUESDAY, the 16th of JANUARY. The lowest or any Tender will not necessarily be accepted.

CONTRACTS.

TO BUILDERS AND OTHERS.

SEALED TENDERS for the following SERVICES at Bull Point, viz.:—

1. Building Cottages for a Foreman and Sixteen Labourers;
2. Building a Cook-house and Wash-house for the Crews of the two Powder Vessels, with Pits, and Urinal;
3. Building an Office for the Ordnance Storekeeper;
4. Building a Civil Watch-house and a Shed for Waggons;
5. Building a Warder's Lodge and a Shoe-house;
6. Building an Engine-house;
7. Building a Boat-house;
8. Removing the present Wooden Filling and Examining-house at Kerbarn to Bull Point;

For SPECIFIC SUMS, will be received at the Ordnance Office, Pall mall, London, on or before the 25th of JANUARY, 1855. Detailed specifications of the above eight services, and every requisite information, may be obtained at the Royal Engineer Office, Bull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 9th JANUARY next to the 25th JANUARY, both days inclusive.

Royal Engineer Office, Dev nport, 10th December, 1854.

ORDNANCE CONTRACTS. — Notice is hereby given, that the Honourable the BOARD of ORDNANCE will receive TENDERS, on or before SATURDAY, the 10th of FEBRUARY next, for the Performance of such Work as may be required (by them) of the undermentioned trades, at York, Hull, Leeds, Bradford, and Scarboro', for three years, commencing from the 1st of April next:—

Bricklayers'	Work
Masons' and Paviors'	do.
Carpenters'	do.
Slaters'	do.
Plasterers'	do.
Plumbers'	do.
Smiths'	do.
Painters', Glaziers', and Varnishers' ..	do.
Gas-fitters' (Work only) ..	do.

N.B. Parties are particularly required to observe, that it is desirable to Tender for the whole of the trades at one place than for a part only; but the per centages must be separately stated for each trade.

Printed schedules for the different trades, and Forms of Tender, can be obtained on application at the Royal Engineer's Office, 5, New-walk-terrace, York; the Barrack Office, Citadel, Hull; the Barrack Office, Leeds Barracks; and of the Master Gunner, Scarboro' Castle, any day (Sundays excepted), between Ten and Four o'clock, until FRIDAY, the 9th FEBRUARY next.

Royal Engineer's Office, York, Jan. 10, 1855.

Royal Engineer Office, Dover, South-east Railway, 2nd January 1855.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Notice is hereby given, that sealed TENDERS will be received by Mr. Hugh Reid, Board of Ordnance, at their Office, Pall Mall, London, on THURSDAY, 18th JANUARY, 1855, to be delivered before 2PM of that day, and for the ERECTION of a BATTERY, with MAGAZINES, near Port Moody, Gosport, county of Hants. Drawings and specifications for the above may be seen any day Sundays excepted on and after the 10th inst. on application to Mr. FARIAN, Clerk of Works, Royal Engineer Office, Mulgrave Portsmouth. Tenders to be sealed, and endorsed "Tenders for the Erection of a Battery, Magazine, Shell, and Fuze Room, at Hulse Redoubt, Gosport," and addressed as above.

TO BUILDERS AND OTHERS.

TENDERS are required for the ERECTION of the CHURCH SCHOOLS, with Residences attached, at Hemel Hempstead, Herts. The drawings, specification, and local directions may be inspected, between the hours of TEN and FOUR, until the 25th JANUARY, at the Office of Mr. GEORGE LOW, Architect, 11, Church-court, Clements-lane, City; and on and after the 22nd of JANUARY, at Mr. HAWLEY'S, Watchmaker, Hemel Hempstead. The Tenders are to be delivered sealed, to the Committee, at the Town Hall, Hemel Hempstead, on FRIDAY, the 26th of JANUARY, by 10 o'clock precisely.

TO BUILDERS, IRONMONGERS, AND ROAD-CONTRACTORS.

PUTNEY EXTRAMURAL CEMETERY.—The BURIAL BOARD for the Parish of PUTNEY, in the county of Surrey, will meet on THURSDAY, the 1st day of FEBRUARY next, at SIX o'clock in the evening, to receive TENDERS for the ERECTION of TWO CHAPELS, Entrance Lodge, Boundary-Wall, Entrance Gates, Iron Railing, &c.; and proceed to the Board of Supervision, ESTIMATES for the purchase of the Burial Ground in Putney Lower Common.—Further particulars may be obtained on application, at the offices of the Architects, Messrs. BARNETT and BIRCH, 3, Graham Buildings, Gray's Inn, where plans, &c. can be seen, and after THURSDAY, the 18th instant. The Tenders to be delivered sealed at the Vestry of the Parish Church, on THURSDAY, the 1st day of FEBRUARY next, at SIX o'clock in the evening; and the parties tendering, or some person on their behalf, are to be in attendance at the opening of the Tenders. The Burial Board do not bind themselves to accept the lowest or any tender.

EVAN HARE, Clerk to the Burial Board, Putney.

ESTIMATES WANTED. — STIRLING POOR-HOUSE. The Parochial Board of the Parish of Stirling have resolved to erect a POOR-HOUSE, FEVER-HOUSE, and ASYLUM, according to plans and specifications thereof, prepared by J. W. and J. Hay, of Liverpool, Architects, and approved of by the Board of Supervision. ESTIMATES for the various departments of the proposed building are required. These may either be given in, in one offer for the whole, or by the different offerers for the respective departments of the work. If estimated for as a whole, then the prices for the different departments must be separately stated. Plans and specifications may be seen at the Council room, Stirling, or at the Offices of Messrs. J. W. and J. HAY, Liverpool, on and after MONDAY, the 22th current. A competent Surveyor has measured out the quantities, copies of which may be had at the Offices of Messrs. HAY, on payment of five shillings. Sealed offers, marked "Tender for Stirling Poor-house," and addressed P. G. MORISON, Esq. Chairman of the Parochial Board, Stirling, must be lodged on or before the 24th JANUARY, 1855. The Board do not bind themselves to accept the lowest estimate.

P. G. MORISON, Chairman.
Stirling, December 19, 1854.

For remainder of Contracts see next page.

CONTRACTS.

TO BUILDERS AND OTHERS

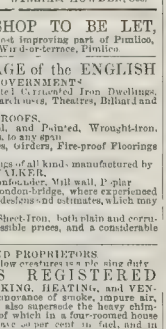
Builder Cadogne-pier and Bonded-store, Mill wall, Poplar Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.

N B Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made for cash.

TO BUILDERS AND PROPRIETORS

To add to the comfort of our fellow creatures as we sing our WIGGINTON'S REGISTERED APPARATUS for COOKING, HEATING, and VENTILATING, will prevent the annoyance of smoke, impure air, and draughts in a house. It will also supersede the heavy chimney-shaft now in use, the saving of which in a four-roomed house will clear the expense. It will save 50 per cent. in fuel, and in many other ways be advantageous to proprietors and tenants. Will do admirably for factories, especially for silk and ribbon, and all trades where any heat is required. To be seen at Messrs. MARSHARD and PASMORE, Worcester Foundry, Worcester. May be had also at Mr CARTER'S, 140, Digbeth, Birmingham; and of ironmongers in all other towns in the kingdom.



IRON-BUILT TRUCKS.—FOR SALE, TWENTY BROAD-GAUGE TEN-TON RAILWAY TRUCKS, in good working condition. Apply to DANIELL and SAUNDERS, Cosham, Wilts.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON —House and Coach Builders, Joiners, Cabinetmakers, and others. Among smaller work, are invited to call at the Patentees, POWIS, JAMES, and Co 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these separate kinds of work at one operating; and as it is self-acting, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PRIZE MEDALS have been awarded to these celebrated Machines, both by the Great Exhibition in London, and many scientific institutions They are extensively used throughout the United Kingdom by joiners, contractors, coach and cabinet makers, railway carriage and waggon builders, machinists, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and turning.

Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

Sold only by WILLIAM FURNESS, Leather, No. 20, Lawn-street, Liverpool, from whom full particulars may be obtained

POWER MORTISING MACHINE

WANTED, THREE or FOUR TRAMWAY TRUCKS, for ballast. Also some RAILS and SLEEPERS. APPLY to MILL require.—Address W. and S. 15, Wheeler-street, Spitalfields.

"London and North Western Railway Company,
"Liverpool, May 17, 1853

"Gentlemen,—I have much pleasure in hearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more fiendish fiends to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs. Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"5, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired. I am, gentlemen, your obedient servant. "C OTWAY.

"Superintendent C Division of Police.

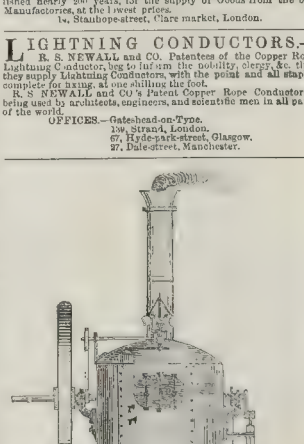
"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS was awarde to J. H BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, 2s. 6d. each



J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare market, London.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. S NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
339, Strand, London.
67, Hyde-street, Glasgow.
27, Dale-street, Manchester.

A SAVING of TIME and MATERIALS, with Safety of Building.

HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 36, Albert-street, Manchester.

TESTIMONIAL.

Stockport.

"Mr. Gough,

"Sir,—In answer to your letter, we beg to say that your engine of three horse power will take 36 barrows per hour, and 190 bricks in each barrow, six stories high, or about 75 feet, and that the engine consumes about 4 cwt. of coals in 10 hours.

"We remain, Sir, yours, &c.

"Mr. H. Gough." "JOHN LLOYD AND BROTHER.

JAMES MICHIE, Engineer, &c. Battersea-park, Nine Elms, manufacturer of all kinds of STEAM-ENGINES (portable and stationary), Sawing Machinery, Pumps, Cranes, Grabs, &c.

N B. Several high-pressure Steam-engines for Sale.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses.
Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.
CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

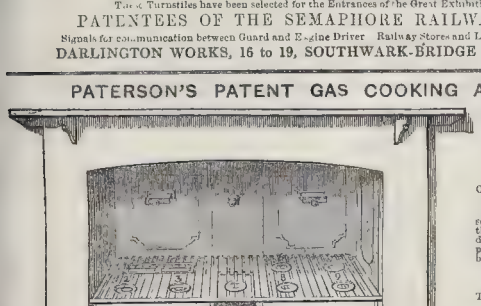
WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.



These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

PATERSON'S PATENT GAS COOKING APPARATUS.

May be seen by applying to the Patentee,

A. PATERSON,

53, VICTORIA-STREET,

WESTMINSTER,

Of whom LICENSES may be had for making them.

On reference to the plate, it will be seen that roasting can be carried on by the open fire, if required; thereby rendering this apparatus the most compact and efficient of any that has yet been brought out.

THEY ARE MANUFACTURED BY

T. WALLER and CO.

Ratcliff Ironworks, Rose-lane, Ratcliff near the Stepney Railway Station.

Where they may be seen in operation, and where prospectuses and every information concerning them may be obtained.

Also Manufacturers of every description of

GAS STOVES, BATHS, OPEN AND CLOSE KITCHEN RANGES, HOT WATER APPARATUS, METAL CONSERVATORIES, &c.

N.B. The Trade supplied with Iron Sash Bars, bent to any shape or design. See "The Builder" of Sept. 16.

HOT AIR, GAS, VESTA, JOYCE'S STOVES.—STOVES for the economical and safe heating of halls, shops, warehouses, passages, basements, and the like, being at this season demanded, WILLIAM S. BURTON invites attention to his unrivalled assortment, adapted (one or the other) to every conceivable requirement, at prices from 10s. each to 30 guineas. His variety of register and other stoves is the largest in existence.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from all the various manufacturers all that is new and choice in Brackets Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designs expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Establishment the largest and most remarkable in the kingdom, viz. from 12s 6d. (two light to 16l.

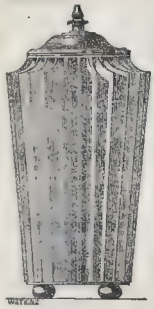
WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS devoted to the show of GENERAL FURNISHING IRONMONGERY (including cutlery, nickel silver plated, and japanned wares, iron and brass bedsteads, so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent per post free. Them oney returned for every article not approved of.

39, OXFORD-STREET (corner of Newman-street); 1, 2, and 3, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 1000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood and of iron and wood combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford street

MAGNUS'S PATENT ENAMELLED SLATE CABINET-FORMED FIRE-PLACE.—This is decidedly the most novel, elegant, economic, and comfortable fire-place that has ever been introduced to the public. It moves on castors, and stands BEFORE the opening of the chimney, projecting into the room as a regular cabinet. It is composed of fire-stone and slate, and has hot-air chambers. It may also be fitted up for gas instead of coal. By the economical, who dislike to see half the heat from the coal wasted in the chimney, and by persons of taste, who object to the stiff unmeaning chimney-piece in ordinary use, the CABINET-FORMED FIRE-PLACE has only to be seen to ensure its adoption. Price from ten guineas upwards. Pimlico Slate Works, 39 and 40, Upper Belgrave place, Pimlico.



HEATING by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s 9d. This achievement in heating by hot water is unprecedented.

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection, may now be seen in daily operation at F. EDWARDS and SON'S, 49, Poland-street, Oxford-street. By this grate a smoky chimney is prevented, no chimney sweeping is required, and a saving of at least thirty-five per cent. is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and hot air or metal stoves. Old grates are altered to this principle.—Prospectus sent on application.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT. The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 148, Regent-street, London.

THE SMOKE CONSUMING STOVE, invented by Dr ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 452, Holborn

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is made in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO., opposite to the Monument, London-bridge. Established A.D. 1700.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Stores, Warehouses, Hotels, &c. Hot Air, require no Flue, create no Dust, and are safe from all risk of fire.

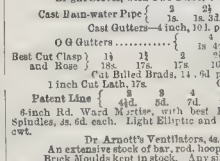
Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water

SYLVESTER'S IMPROVED AIR WARMER

is the most powerful salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to

SYLVESTER and CO.



Engineers, and Manufacturers of Heating Apparatus, 96, Great Russel-street, Bloomsbury

SAW-MILL MANUFACTORY, Chelsea, London.—WORSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

SKAIFE'S GALVANIZING WORKS,
COMMERCIAL-ROAD, LIMEHOUSE, LONDON.
SKAIFE'S process is the most effectual preventive against rust, and is extensively used for all purposes where Iron, not liable to rust, is required.
PATENT GALVANIZED IRON SUPPLIED IN EVERY FORM. SHEETS PLAIN AND CORRUGATED. ROOFS FIXED COMPLETE.
J. SKAIFE IS ALSO AGENT FOR MOREWOOD AND ROGERS'S PATENT GALVANIZED TINNED IRON, PLUMBIC ZINC, AND TILES.
AN ALLOWANCE TO THE TRADE.

DAVISON'S IMPROVED STABLE PAVING BRICKS.
The attention of ARCHITECTS, BUILDERS, and Others, is particularly directed to this PAVEMENT, so especially adapted to
STABLES, CATTLE, OR CARRIAGE SHEDS, COURT-YARDS, &c.
The peculiar nature of the clay of which these Bricks are made, and the intensity of the heat to which they are exposed, render them the most remarkable for durability ever produced, being found to endure much longer than Stone Flags, Dutch Clinkers, or any other kind of pavement hitherto used for those purposes.
The particular advantage of this Pavement over all others is, that it gives such a perfect security of footing to Horses and Cattle when passing over it.
These Bricks have been used by Mr. S. R Eyre, Architect, Liverpool; at Mr. Rea's Great Central Horse and Carriage Repository, near the "Elephant and Castle;" and by Mr. John Jay, at the Metropolitan Cattle-market, Copenhagen fields, where they may be seen laid down.
Prices, drawings, and particulars, sent post free, on application to the Sole Manufacturers,
CHARLES DAVISON & CO.
FIRE-BRICK AND TILE MANUFACTURERS, QUEEN'S FERRY, NEAR FLINT, NORTH WALES.

NORTH BRITISH CAST and WROUGHT IRON OFFICE, No. 18, King William-street, Charing-cross, just opened, through which Builders can be supplied with castings direct from the foundry in Scotland, and wrought-iron goods from the works near Birmingham, at the manufacturer's prices, as the following list will testify:—

	2 in.	2½ in.	3 in.
Rain Pipes	3½d.	1s. 2d.	1s. 6d. per yard.
	3½ in	4 in.	4½ in.
Cast-Iron Gutters	8½d.	9½d.	1s. per yard.

The new U G SOCKET GUTTERS.—Instead of the clips being loose, they are cast on in the solid and form the Socket.

	3½ in.	4 in.	4½ in.	5 in
Plain		1s. 4d.	1s. 5d.	1s. 9d. per yard.
Lion head	1s. 2d	1s. 4d.	1s. 8d.	2s. "

All the larger sizes of pipes and gutters at equally low rates.
AIR BRICKS.—A new registered design at 4s. per dozen.
GALVANIZED CAST-IRON FURNACE-PANS, 6 to 25 gallons, at 3½d. per gallon.
Shell WEIGHTS, &c. per cwt.
Self-acting Cottage Ranges, with Boiler and Oven, from 32s. each.
Register and Elliptic Stoves, and all kinds of Builders' Castings at similar reduced quotations.
Orders taken for common Bar Iron, at 10s. 6d. per cwt. Cash on delivery. Manager, Mr. RUSSEL.

HART AND SON,

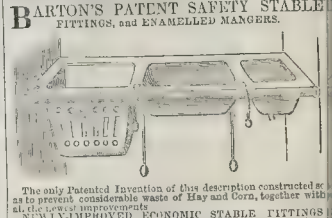
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

TO IRONMONGERS AND THE TRADE GENERALLY
D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—35 and 36, High Holborn.



WILLIAM BAKER, BRAD-AWL MANUFACTURER, Manufacturer of all kinds of Saddlers' Awls, Collar Needles, Packing Needles, Upholsterers' Needles, &c. &c. Manufactory, No 14, Allen-street, Clerkenwell, London. Established twenty-five years. Honourable mention, Great Exhibition, 1851. Prize Medal, New York Exhibition, 1853.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER TROUGH, as ONE FIXTURE; they are universally approved of, and received the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, coolness, safety, comfort to the horse which feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fitments. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock. Descriptive catalogues and estimates on application to COTTAM and HALLEN, 3, Winsley-street, Oxford-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

The only Patented Invention of this description constructed so as to prevent the considerable waste of Hay and Corn, together with all the lowest improvements.
NEWLY IMPROVED ECONOMIC STABLE FITTINGS FORTY SHILLINGS PER SET, to fill up the whole width of Stall, and can be had enamelled or galvanized. Every description of Mangers, Racks, and Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c.
Manufacturer of Kite's Patent Noiseless Cast-Iron Smoke-cumming Chimney Cans (300 on Buckingham Palace), price 25s. each. Price lists and Illustrated Catalogues forwarded on receipt of two postage stamps.
JAMES BARTON, Ironfounder, &c. 370, Oxford-street, a few doors east of the Pantheon.

NAILS and IRONMONGERY from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES
A complete LIST of which will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

TO IRONMONGERS, BUILDERS, &c.
PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO 35, High Holborn.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY PLUMBERS,

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

sing universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently ultable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

Sheet lead, pipe, zinc, tin lead, oils, turpentine, colours, &c.—G. FARMILOE and SON, 118, St. John-street, West Smithfield, London.

CRYSTAL WHITE GLASS, first, second, and third quality, particularly adapted for pictures and the best description of glazing, being far superior in colour to patent plate. In cases of 200 and 300 feet each, at 4d. 6d. and 8d per foot; sizes varying from 24 by 16 to 40 by 28.—G. FARMILOE and SON, 118, St. John-street, West Smithfield.

SASH and DOOR MANUFACTORY, 59, GRANGE-ROAD, BERMONDSEY.—I. SUGDEN respectfully invites builders and the trade in general to an inspection of his stock of manufactured joiners' work, prepared from the best material, at the lowest possible price.

P.S. A full list of prices on application.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, sashes, mitring windows, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

REVOLVING SAFETY WOOD and IRON SHUTTERS SNOXELL, Patentee, 26, Regent-street, and at his Steam-works, 155, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—TREGELLES and TAYLOR, 3, Pinner's court, Old Broad-street. Manager—JAS J. TRATHAN, Liskeard.

This Granite is selected for the New Westminster-bridge

GRANITE, MONUMENTS, TOMBS, TABLETS, LEDGERS, LANDING STEPS, &c. polished or otherwise, as required. Granite blocks, ashlar, chimney, &c. Bramley Fall and other stone. Cargoes of the above stone supplied direct from the quarries. Goods landed and shipped.—Apply to Mr. G. H. CLARK, Stone Merchant and Granite Agent, Devon Haytor Wharf, Rotherhithe, London.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account.

Mr. Thompson being no longer his agent.

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

BUILDERS, &c. &c.—Take Notice of the extraordinary Reduction made in the price of marble work at the WESTMINSTER MARBLE FACTORY. A Vein Marble Box Chimney-piece, only 25s. A good-sized Vein Marble Box Chimney-piece, with cane and brass on plinths fitted up in the best style, only 11. 12s. Their patent machinery enables them to execute Marble Floors at 2s. 6d. per foot superficial, and every variety of Marble work at reduced prices. Their Show Rooms contain the largest Stock of Chimney-pieces in England.—Address WESTMINSTER MARBLE COMPANY, EARL-STREET, MILLBANK.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention that defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing mills, Cambridge-heath, Hackney. WM. HUSTLER, Proprietor.—Two Marble Masons wanted.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles is received direct from the principal Quarry owners in Italy and Belgium, FOR SALE, on COMMISSION ONLY, and they consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES.

Just arrived, per *Roberto, Vibon, Betty, Natalie*, and *Harbor Lass*, 150 Blocks of Marble, and 12 000 feet of Sawn Slab, Mortars, Vases, &c. Yorkshire and Portland Stone, Timber Deals, Floors, &c. for Sale on consignment.—The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for York-shire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney Pieces in the Metropolis; consisting of a selection of upwards of two hundred, all manufactured by steam power from the finest Pyrenean and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Anne's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marbles, at the lowest remunerative prices

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LIST for SLATES and SLAB WORK for 1851 are NOW READY, and can be had on application, inclosing a postage-stamp

N.B. A liberal discount to the trade.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set; with jambs, moulded with large ogee on inner edge, set on plinths, Mantel moulded with ogee and fillet under shelf, and shelf with hollow on edge, to 50s. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on-Tyne.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

GATES and GEORGE, GENERAL STONE MERCHANTS, Caen Wharf, Rotherhithe, beg to inform Whiting Manufacturers and Warehousemen, and Wholesale Dealers in Hearth and Burr Stone, that they can be supplied in quantities from three tons and upwards with the above, delivered at the South-Eastern Railway Goods Depôt, Bricklayers' Arms Station, Old Kent-road, at the current price. Terms, samples, and other information may be obtained at the Office of the Wharf above.

GODSTONE STONE.—This desirable building stone can be supplied to London and its vicinity in any quantity by railway or water carriage at a price far below most other stones in Works and ashlar of specified dimensions and fine scappled, also random and coursed rubble. It is easily worked to a good face and fine arris; is of beautiful colour and durable quality, as may be seen by the old buildings and churches in the neighbourhood of the quarries and counties adjoining.—For information and samples apply to GATES and GEORGE, General Stone Merchants, Caen Wharf, Rotherhithe.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Lugard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 340, High-street, Southwark, near the Townhall.

THE CASTLE SLATE QUARRY.—NOTICE to the SHAREHOLDERS and the PUBLIC.—The 2,000 shares hitherto kept as a reserve fund, in consequence of the great extension of the present workings, and the opening of the new quarry, will now be issued at 1l. per share to the original shareholders, and at the present market price of 1l. 10s. to the public. Applications may be made immediately to the Purser, G. HADLEY, Esq. at the Offices of the company, 8, Old Jewry, where every information respecting the present state of the quarry dividends paid and shortly due, may be obtained. The shares now issued will participate in the next half-year's dividend after the payment of the one due, in the six months ending December 31st, 1851.—By order of the committee,

Jan 4, 1851. GEORGE HADLEY, Purser.

PROFITABLE INVESTMENT.—To BUILDERS and SLATE MERCHANTS. On SALE, 20, 10, and 5 l Shares, all paid up, in a valuable SLATE QUARRY, near Carnarvon. A rare opportunity for builders and slate merchants to possess an interest in a good quarry.—Apply to Z. Messrs. Smith and Son's, Railway Station, Bangor.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and at the Crystal Palace, Paddington-basin, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roofs of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

FORSTER and SLATE'S PATENT CONSTANT SUPPLY FILTERS, tested and approved by the first water engineers in the country. Used and approved at the offices of the General Board of Health. Exclusively adopted by the Crystal Palace Company. Easily cleaned without trouble or expense.—To be seen in operation daily, at J. EVANS and SON'S, Ironmonger-s, 34, King William street, London-bridge.

IMPORTANT NOTICE to ARCHITECTS, BUILDERS, and OTHERS. CHARLES NOSOTTI, Looking-glass Manufacturer, Interior Decorator and General House Furnisher, begs most respectfully to inform the above, that, from the extent of his trade, he is enabled to offer pecuniary advantages both in quality and price. Designs made or carried out to any extent. An extensive assortment always on hand. Estimates free of charge. Plate-glass for glazing purposes, at 30s and 39s. Oxford-street.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Parchments for ceilings of every period, elaborate or simple designs, Egyptian, Grecian, Renaissance, and Louis XIV. in much variety, and to any degree of cost, Italian and Greek Renaissance, and many modified characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-cases, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel fillings for church works, organ dressings, of most periods, and faithfully executed to the era in which each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent as furniture, glass frames, tables window cornices, screens, cane chairs, and the whole range of accompaniments to receptive rooms of the first class, as well as mirrors by art.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

SEVERAL INVESTMENTS REQUIRED immediately, by capitalists who are desirous of investing various amounts in some secure way, at a moderate rate of interest. The persons offering their properties may return power to repurchase after a fixed period, if so preferred.—Apply to Mr. ALFRED COX, Estate Agent, 66, New Bond-street.

MONEY on LOAN, at 3*l.* per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Moneys to poor occupiers of tenements resident within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of any loan is not to exceed 10*l.* is to bear interest after the rate of 4*l.* per cent. per annum and is to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, in full necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.

By order, EDWARD S. STEPHENSON,
Clerk and Solicitor to the Trustees.

NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as may then and in one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

LOANS.—Persons desirous of obtaining ADVANCES, from 50*l.* to 250*l.* upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules, 6*d.* each copy, or 1*s.* per post.

CHARLES JAMES THICKE, Resident Secretary.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER HANGINGS is QUEEN'S WHOLESALE WAREHOUSE, 29 GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXPENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other House in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS executed, Interior, Isometrical Perspectives set up, outlines of same neatly coloured, with black ground, in terms that will insure approval. Temporary assistance given in getting in Plans, &c. at No. 8, Rathbone-place. Land Work and Drawings Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, 8, Rathbone-place.

ARCHITECTURAL and CIVIL ENGINEERING CLASSES, OPEN for the instruction of pupils, at one guinea per quarter, which includes drawing materials, instruments, colours, paper, drawing-boards, T squares, &c. and instruction in mechanical and constructive, drawing and colouring, making finished and working drawings, preparing specifications, taking out quantities, estimating, &c. &c. For prospectuses, apply to Messrs. HYDE, SMITH, and LEWIS, Civil Engineers, Architects, Surveyors, &c. 21, Guildford street, Russell square.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Orange-street, Chapel, beg leave to submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner. Venetian Blinds per square foot, 9*d.*; best linen blinds, on rollers, 6*d.*; best ditto, on spring rollers, 9*d.*; gauze wire blinds, in mahogany frames, 2*s.*; perforated zinc ditto, 1*s.* 10*d.*; outside blinds of striped cloth, 2*s.* Transparent blinds in great variety. Engravings, with prices and directions to builders and the trade, forwarded on application, post free.

PATENT SANITARY GAS SHADES.—These shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have to be borne under the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTORS, Crispin-street, Spitalfields, London.

HENMAN'S IMPROVED SYSTEM of STREET ARCHITECTURE, applicable to new streets in large towns or cities, or in the building of new towns or cities in the colonies or elsewhere in outline, the plan may be seen at the Sanitary Exhibition, 1851. The object is to secure, at places, convenience, economy, safety to pedestrians, shelter from the weather, and in reased value of building frontages.—CHARLES HENMAN, Architect, London, and Retbing Bedfordshire.

This day, price 4*s.* the 32nd edition of

LAXTON'S BUILDERS' PRICE-BOOK for 1855, containing 1,000 Prices and Memoranda, together with the whole of the Building Act, and Abstract of the Paving Act.

By FREDERICK W. LAXTON, F.S.A. Barrister-at-law, and HENRY LAXTON, Architect.

Published at the Office of the "Civil Engineer and Architect's Journal," 19, Arundel-street, Strand, and to be had of all booksellers.

Just published, Part I. super-royal 8vo. in paper cover, sewed, at 10*s.* to non-subscribers,

GIOTTO, and his WORKS in PADUA. By JOHN RUSKIN.

N.B. In consequence of the numerous applications for Mr. Ruskin's Essay, the Council of the Arundel Society have resolved to sell it to the public without the engravings issued to the subscribers.

Published at the Office of the Arundel Society, 24, Old Bond-street; and to be obtained through any Bookseller) of Messrs. BELL and DALDY, Fleet-street.

NEW WORK BY FANNY FERN.

Now ready, price Two Shillings, with a Frontispiece and Title by Birkett Foster,

RUTH HALL;

A DOMESTIC STORY OF THE PRESENT DAY.

By FANNY FERN.

"The story is exciting great interest here, being Fanny Fern's first attempt at a long story. It is also thought, by some, to be the story of her own early life. Some of the scenes are delineated with touching pathos, others display the vigorous flashes of satire so natural to her when wrought up as she had under her lash." *New York Correspondent.*

PROFIT AND DISCOUNT TABLES.

In One Volume, the Third Edition, bound in roan, price 3*s.* 6*d.* or 4*s.* Free by Post.

SHOWING the Prices at which Articles must be Sold to obtain Profit at a certain Per Cent. age upon their Invested Cost. And also, the Net Cost of Articles, when Discounts are allowed on the Invoiced Prices. Adapted for the advantage of Traders in their Purchases, Sales and Taking Stock. The Calculations are upon Prices from One Penny to Twenty Shillings, and at the rates, from One and a Half per Cent. to Seventy-five per Cent.

To which is added, Tables of Foreign Weights, Measures, and Money, with their Comparative Values in British Standard. Also, Observations on the new Receipt and Bill Stamp Acts.

By CHARLES ODY ROOKE, Accountant.

London: WILLIAM TEGG and Co. 85, Queen-street, Cheapside.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1*s.* A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. I. for January, just published.

GEO. ROUTLEDGE and CO. Farringdon-street; and 18, SPENCER, 314, High Holborn.

Now ready, price Five Shillings, Third Edition of Part III. of the

TREATISE on INDUSTRIAL INVESTMENT and EMIGRATION, being Suggestions for the Enfranchisement and Improvement of Copyhold, Life, Leasehold, and Church Property, by the application of the life assurance principle, with Rules and tables for the formation of Copyhold Enfranchisement and Freehold Land Societies, and a Mathematical Appendix. A SUPPLEMENT, GRATIS, with the WEEKLY DISPATCH, EVERY WEEK UNTIL FURTHER NOTICE. The unexampled interest which attaches to every incident connected with the operations of the Allied Armies in the East, has determined the Proprietors of the WEEKLY DISPATCH to devote a greater space to the intelligence from the seat of war than the ordinary limits of this, the largest newspaper published, could possibly afford; and, with the view of giving the amplest details, they have resolved upon the issue of a Series of Supplements GRATIS, which will include every particular of interest connected with the Siege and Session of the contest at Sebastopol, and will be continued whenever demanded by the progress of the Campaign. It is the publication of these Supplements that portion of the Paper usually devoted to incidents of domestic and political importance will be reserved intact, and the engrossing subject of the War will receive the full and most varied illustration. A Supplement will be published on Sunday next (Gratis), and on every succeeding week until further notice.—Orders may be given to all Newsvenders in town and country; and to the publisher, at the *Dispatch* Office, 139, Fleet-street, London.

The Builder.

SATURDAY, JANUARY 13, 1855.

THE consideration of the construction of Indian domes was resumed at the Ordinary Meeting of the Royal Institute of British Architects on December 11th, with especial reference to the artistic and constructive merit of the great Dome of Sultan Muhammed's Tomb.

Mr. Fergusson said, speaking of the history of domes, the first great example which it is necessary to quote is the Pantheon, which is raised on a circular apartment or drum, as were all the earlier domical tombs of the Etruscans and Romans. The inconvenience of this form was however early felt, and an octagonal one was adopted, and then a square, the angles of which were cut off, so as to form an octagon internally, and then the triangular blocks in the angles were hollowed out into great niches, so that very little space was lost. In course of time the head of the niche became an arch, springing from wall to wall, and so formed what may be called the Roman pendentive. It was generally brought down to the ground by a vaulting shaft, but that was of little or no constructive use.

The Byzantines made an advance on this by filling up the angles of the building with a bold bracket springing from each angle, with a vaulting shaft in the corner, which gradually extended forward, till it formed the octagon at the springing of the dome.

The Saracenic architects used both these forms; though it may perhaps generally be asserted, that in the western world they preferred the Byzantine; in the eastern the Roman pendentive. In India there are some noble examples of both classes. In that country, after having produced the octagon, they generally cut off the angles again, so as to produce a polygon of sixteen sides, and in large examples repeated the operation, so as to have one of thirty-two, which is practically so near a circle that a dome can be placed on it without difficulty or apparent abruptness. But besides gaining this floor for the dome, several other points have to be attended to, and the first is, that externally the dome should spring from within the line of the walls: internally, the same line should be carried up, but externally such an arrangement would be weak in the extreme. In small buildings this is easily got over: a wall 6 feet thick allows a dome 3 feet thick to be placed 3 feet from its face; and by thickening the wall another foot or two, the required apparent stability is obtained. In larger buildings this is generally effected by an outer verandah, or range of apartments, which, added to the internal square, gives the requisite base to the dome.

At Beejapore, however, and in domes of such size, neither of these expedients was available. It would have required walls 15 to 20 feet thick had the first—and an enormous increase of height had the second—expedient been employed, or the building would have appeared squat and ill proportioned. The architects, therefore, adopted the plan exemplified in the drawings, which I will call, if you please, the Beejapore pendentive, which consists in carrying the Roman arch, not from one point of the octagon to the one nearest it, but to the next: by this means a much more extended floor is obtained for the dome; and though of the same thickness as the walls, it can be brought as far within their line as appearances require. A second advantage of this construction is, that the architect obtains a mass of masonry so much larger than the whole mass of the dome, that no motion or disturbance of its equilibrium can affect the support on which it stands; and, consequently, if there be not some most glaring inherent defect in the dome itself, it would stand for ever. A third advantage is, that the mass is so placed that its tendency is to fall inwards, or, in other words, to draw the building together. This is easily and surely counteracted by the arch form of the circle; but, at all events, outward motion is impossible, and that is the one thing to be avoided in the present instance. A fourth advantage gained by this construction is the great gallery which surrounds the base of the dome, nearly 13 feet in width, which is not only a noble feature in itself to a person walking upon it, but when seen from below, has all the effect of the boldest cornice in the world—which it is,—and conceals the springing of the dome from every point, so that it seems like a vast vault of unlimited extent spanning the whole space below with a simple grandeur, which, so far as I know, is unrivalled in any part of the world.

On the last occasion, continued the speaker, several parties objected to the construction of the dome as unscientific, and had the discussion taken place at the Institution of Civil Engineers, the issue should have been taken on that point. Here, we ought rather to ask, is it artistic? according to India notions, it certainly is; and so I think all will agree who see how exquisitely proportionate it is to the mass it covers,—how solid, and, if I may so express it, solemn its outline is, and consequently how appropriate for a tomb. That it is unscientific, according to our European notions, I willingly admit, as it is thinnest at the springing, where it is 9 feet 6 inches: a little above this it is 10 feet 6 inches, and carries a thickness of rather more than 10 feet to the apex, where it is 18 feet; a mode of construction exactly the reverse of ours, and perhaps of what it should be, if the question was only how the place could be roofed with the least possible number of bricks. That its science is sufficient is proved by the fact that it has stood two centuries uninjured: indeed, barring earthquakes and pepul trees,* it would, with moderate care, stand for ever.

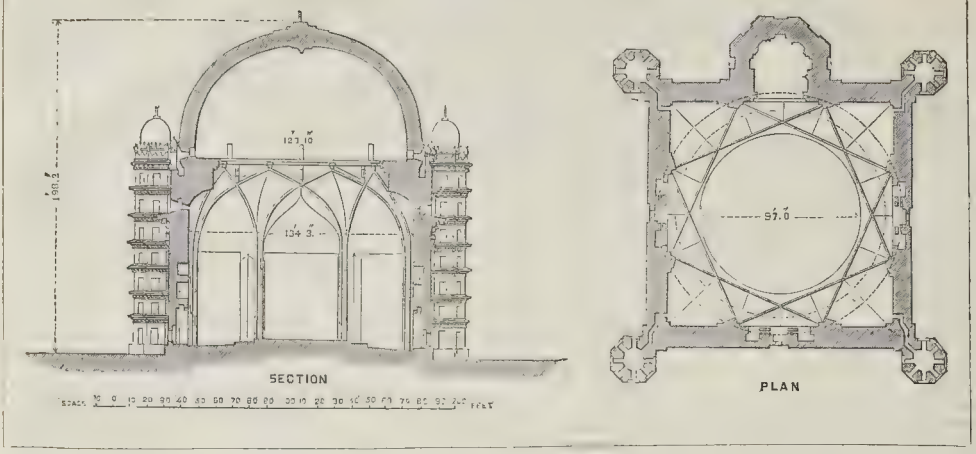
The fact is, the Indians knew so well the capabilities of domes that they could play with them, and have no fear of their falling: we in Europe are afraid of them, and have never fairly tested their capabilities.

Sir Christopher Wren shirked the question entirely, by introducing a cone, constructively no doubt the best form for his purpose—artistically the worst, as he confessed by hiding it both internally and externally.

Brunelleschi halved the difference, adopting a form slightly curved externally. The octagonal form of his plan rendered this tolerable, though not beautiful: for a circular dome it would be unbearable.

Michelangelo did better, and produced a bolder construction and a far more artistic form; and, had he been able to secure his base constructively, without iron ties, his dome might have been eternal. Had either he or Wren known, for instance, of this Beejapore mode of placing a mass at the springing, sufficient by its inertia to resist any movement in the vault, and to convert all outward thrust into inward pressure, they might have constructed far larger domes far more solidly than they have done. I trust the subject may excite some interest, for I feel, so far at least as my own personal convictions are concerned, that the dome is by far the noblest feature which man has conquered from nature for building purposes. Externally, its grandeur far exceeds that of Gothic steeples or towers, or any other form we are acquainted with. Internally, it covers larger spaces than any other form of permanent roof, and in its simple sublimity far surpasses all the elaborate littlenesses of Gothic vaultings. It is also a true roof, which no Gothic vault is, the latter being merely a sham ceiling under a wooden roof, like the dome of St. Paul's; but when its construction is understood, a dome requires no such covering, but ornaments the building it surmounts, both externally and internally. It is also, I am convinced, the easiest constructed of all true roofs; and whether it is thin as the dome of earthen pots of San Vitale, or constructive as that of the Pantheon, or bold as that of the tomb of Muhammed, it stands with ease and lasts through ages, and, with our science, may be made as eternal as the pyramids.

Before concluding, said Mr. Fergusson, I may allude to one other dome, that of Sta. Sophia, at Constantinople, of which at last some authentic particulars have been obtained in the work of Salzenberg of Berlin, who, taking advantage of the scaffoldings erected by Fossati for the repair of the building, measured carefully every part of it, and has just published the result of his researches in one of the most beautiful works produced for a long time, from which the section on the wall is copied. From this it appears that the diameter of the drum of the dome is 100 Prussian feet, or 102 feet 11 inches English, but the dome itself is 4 feet more, or 107 feet in diameter. It is constructed of forty ribs, projecting each 2 feet, which die away towards the centre, leaving about one-third of the dome perfectly plain. The form is segmental, 45 feet 6 inches in height, and described consequently from a point about 8 feet below the springing. Round the base are forty windows, which throw in a flood of light; and altogether its appearance internally is as beautiful as any known of.



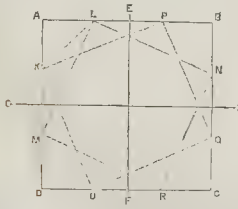
These correct details being added to our previous small stock of knowledge regarding Sta. Sophia, must be considered an immense gain to architectural science, and connected with what we know of the dome at Beejapore, will open a new era in the science of dome building.

In reply to questions, Mr. Fergusson again stated that the dome at Beejapore was constructed of brickwork without centering; that the courses of the pendentives were not horizontal, but radiating; and that the mortar was made of the common lime of the country, which was very good. In India such buildings as the tomb of Muhammed probably took twenty years in their construction, out of which not less than three or four years would have been occupied on the dome.

A communication from Mr. Penrose, to the following effect was read:—"It will be seen, in the section of Metz Cathedral, that the wall above the vault overhangs to some extent, and also (as in all the old vaultings which I have examined), that the courses are carried up horizontally to a considerable height, thus corbelling out to meet the thrust, and opposing to the outward pressure of the vault a tendency in the wall to fall inwards. 1st. Considering the wall by itself. The tendency of the overhanging mass is to fall forwards in a direction contrary to the thrust of the vault. 2nd. And considering the vault by itself. As practically there is seldom any chance of the voussoirs sliding upon one another, the horizontal pressure at the crown of the vault acts by means of a continuous lever about the fulcrum, at the lowest radiating joint. Had the radiating joints extended to the springing, this fulcrum would have been at the springing, and not only would the thrust of the vault been greater, but the

* Pepul trees (*ficus religiosa*) are the great enemies of buildings in India. They grow *par preference* on brickwork, and if once they get their roots into a crevice, they split the strongest wall in a very few years, and tear domes especially to pieces.

THE GOL GOOMUZ, BEEJAPORE.



advantage of the counteracting pressure already referred to would have been lost.

The advantage obtained in the construction of the Indian vault is an interesting variety, but the same in principle. The fulcrum of the great dome is at its base inside, and the inward tendency of the great corbel, which is formed below the great arch, instead of above it, as in Metz cathedral, opposes itself to the outward thrust. I think that the curious arrangement of the arches which seem to support this great corbel, as I have called it, is meant to amuse the eye, and has very little to do with the question of equilibrium. It does not appear to me that the great dome itself is worthy of much commendation, except it be that a great thickness of material is useful to exclude the heat, but which a hollow construction, which such an architect as Brunelleschi would have advised, would have done much more efficiently. I think that while we admire the happy arrangement of the lower part, we cannot call the whole construction scientific, which would imply that thought had been well bestowed on every part."

Mr. Papworth stated, that as to the principles of the construction of the great mosque in question, he would preface his two chief points of consideration by saying, that he believed there was no one present capable of pointing out any published work on domes which had any authority whatever, and that, therefore, if his views were mistaken, they must be imputed to unintentional ignorance: at all events, he would make the assertions that a dome was not an arch, and that domes were not governed by the same laws as vaults: at least that was what he meant to lay before the meeting for its examination and investigation. He reserved the right of allowing certain exceptions, into which he should not then enter, but be satisfied with calling the attention of the meeting to the question of the scientific construction of the dome and its pendentives.

He would begin his own remarks with the pendentives. It seemed that A B C D being a

square (say of 100 feet), and E F G H the diameters, F G deducted from A D giving the point K, and the points L M N O P Q R being similarly found, then the common pendentives in K L, &c. were more scientific and practically useful than the pendentive of the Gol Goomuz formed on the intersecting lines P K, K M, O K, L, &c.; for the wall, if 7 feet thick, which was about the proportion to 100 feet adopted at the Gol Goomuz, would, in the case of K L, give a pier for thrust 49 square feet in area at K and L; but in the case of K P, 119 square feet at P, and 21 square feet at K. The lengths of K L would be 64 feet, and K P 86 feet; therefore half the arch on K L, equal in base to 32 feet, would thrust on a pier of 49 feet square in base, while half the arch on L N, equal in base to 43 feet, would thrust on a pier of 119 square feet in base, while the other half, or 43 feet, would thrust against a pier of 21 square feet in base; and he would assume as a rule in building that equal thrusts came best on equal piers, if economy in materials was to be considered a merit. He could not discern the peculiar merit supposed to be displayed by the principle of the pendentives which had been described as adopted in the Gol Goomuz.

Explanations were entered into, Mr. Fowler, Mr. Tarring, and others taking part, but these could not be understood without diagrams.

Mr. Papworth then entered into calculations on the causes of the stability of domes, showing that in domes of equal thickness the upper half of each gore was only one-third in weight of the lower half, and adduced the possibility of loading the crown to a certain extent; producing a series of drawings of domes, constructed upon principles which ought theoretically, if they were arches, to lead to their failure, but which had nevertheless proved perfectly sound; his views being fortified by Mr. Fergusson's concurrence as to the absence of examples of failure where the bases were stable. He then alluded, with his reasons for non-concurrence, to suggestions that the dome of the Pantheon at Rome had been built on the principle of a bridge, *i. e.* of an arch; that it was impossible to plan a large dome without great thickness of walls, *i. e.* greater than sufficient to bear the weight and its consequences; that it was necessary for the exterior of a dome to stand flush with the wall of the building to which it belonged; that it was desirable to append heavy corbelling to the inside of the wall to counteract the thrust of a dome, with special reference to some circular tambours of which he exhibited sketches; to the supposed unnecessarily great weight on the top of some examples; and to the supposed beauty of principle exhibited in the dome of Sta. Maria, at Florence, which he characterized as a piece of octagonal vaulting, and not a dome. He also explained that domes which had failed had not been supported on a stable foundation; that he saw great beauty in the idea of forming an eye in so large a dome as that of the Gol Goomuz, where the centre of the curve on each side of the section was in the edge of the eye; that the outer face of the springing of a dome might be within the inside of the square enclosing wall of the building; that if the principles of vaulting were applied, the waggon-headed section of the Gol Goomuz dome would not be expected, theoretically, to stand; and concluded by some observations in explanation of his illustrations, as to the requisite thickness of domes.

Mr. Hesketh thought the dome in question was constructed partly by a system of corbelling, as any tendency to thrust with concentric rings might have been got over by constructing a portion of the lower part by such a system. The dome was probably constructed so as to have no lateral thrust whatever. It required only a vertical support; and the support it derived from the arches was real, as Mr. Fergusson had explained. He thought the great external projecting cornice had been made use of in carrying the thrust of the arches from their haunches to the four angular towers, which, it appeared to him, were so placed in order to receive it, and could not be intended for any other purpose.

Mr. Jennings observed that the question now under discussion was, how the building had been so admirably constructed; but a preliminary question should be, whether it was really constructed on scientific principles or not. The thickness of the dome (10 feet) itself proved a want of scientific knowledge, and it did not appear to him that the form was the best that could have been chosen. The consideration of the pendentives was interesting, as affecting the question of the direction and resolution of forces. He could not see that the weight of the dome had increased the strength of the building, or that the thrust had been carried into the angular tower.

Mr. Fergusson said, that from its thickness the dome was certainly unscientific, and that, as an engineering point, it failed. It was an artistic and not an engineering dome. No contractor or engineer would propose now to construct a dome in the same way; but when a Mahomedan king was constructing his own tomb, he did not care for a million of bricks: the only point was to realize the artistic effect which was thought necessary. Whatever was the abstract power of the arches, it came across the great mass in the angles, which was immoveable, and could not be affected by any of the thrusts. In an artistic point of view it was one of the best domes ever constructed; but of course, if it had to be erected now, it could be done with half the materials.

Mr. Scoles referred to the section of a dome

built under his direction in the year 1841. The span was 30 feet, the supporting walls 3 bricks thick, the springing line 36 feet from the floor. For the height of 3 feet above the springing, the dome was formed by courses of bricks corbelled over: above that it was composed of four courses of plain tiles set in cement—in all 4½ inches in thickness. The construction had fully answered his expectations.

We append a section and plan of the Sultan's Tomb. Some particulars will be found in our last volume, p. 650.

CHRIST'S HOSPITAL.

YIELDING to irrepressible impulse, the City owns to a spirit of reform,—the torrent presses, and the *digues* of prejudice cannot resist it,—every new building denotes an improved taste, and all the new streets bear evidence that a population advancing in arts and commerce cannot be pent up in the closes and restrictions of ancestral habitude.

Smithfield, so long a terror, is, with its retainers, to be swept away: pens may be replaced by plantation or pavement, but it must be reserved as a purified lobe in the lungs of London. As in all improved quarters the quality of the houses will be enhanced by vicinal embellishment; so the public-houses may shift away,—their places will be occupied by factories, stores, and trades, ready to press in and fill the vacuum. A few lime-trees 40 feet high could be easily transplanted, and a fountain or two might animate the scene,—not perhaps much to better the atmosphere, for while 1,000,000 fire-hearths blaze from 300,000 houses, no great abatement of smoke can be made.

To the Christ's Hospital and the Charter House, divided by Smithfield and in close propinquity to it, the change will be of incalculable value; and the term "urban" may hereafter, under a new order of civic regulation, when drovers, knackers, and filth are besomed out, resume its obsolete significance. The removal of Smithfield necessarily involves amelioration in the causeways and the houses; for as the centre of the metropolis radiates from St. Martin's-le-Grand, this particular locality must become the nucleus of trade.

Supposing, however, all these anticipated modifications complete, what an inappropriate site is it for a seminary, to lodge, nurture, and educate 1,000 pupils! The centre of a city must be always prejudicial to the morals of a school; and as frequently recurring contagion has hitherto proved, equally noxious to bodily health.

When built, Christ's Hospital was extramuros and Smithfield-bars gave out into green fields. Since then the City grew around it, and now extends 5 miles thence on every side. We find the institution now not only sustained in its former condition, but pre-eminently advanced in public estimation. The income arising from early endowments and bequests, which may be set down as exceeding 40,000*l.* per annum, is largely augmented by the contributions of governors, of whom, on an average, twenty-five are elected annually; and as they give 500*l.* each on election, 12,500*l.* a year arises from this source. At present the governors exceed 400 in number, besides the lord mayor and aldermen, who, being governors *ex officiis*, contribute nothing, except in rare instances, and yet they claim the patronage in the ratio of three to one, as compared with the rest of the body! It is true that the corporation of early times, their predecessors in office, granted the hospital (the governors) a lease of the site, which will expire in A.D. 2061; but that site and large estates, together with 4,000 marks of revenue, were granted to them by Edward VI. to establish schools, hospitals, and charitable foundations.

As to the edifice, but a very small portion now stands of the original monastery,—the gateway and a portion of the brick building under which it opens, together with the cloistered passage in rear of the basement, being the only well-defined remnant. The brickwork of the superstructure, of about Elizabeth's reign, is most remarkable as a marvel of workmanship. The best portions, such as the schools and dining-hall, are modern. Like all other institutions erected at divers times in various ages, there is a want of unity, and a sad waste of space from incongruous plans.

The number of boys on the foundation has been increasing with the revenue: there are now 850 in Newgate-street and 350 children at Hertford. The latter building was erected A.D. 1683, and is found to be most admirably suited to its objects: having grounds for recreation, and air more congenial to the infantine constitution, it offers a strong contrast to the results at the hospital.

Besides the livings mentioned in a former article, the following are also dispensed by the governors, viz.,—Wormshill Rectory, Kent; Colne Engaine Rectory, Essex; Clavering-cum-Langley Rectory; Ugley Vicarage, and Berden Perpetual Curacy, in same county; Horley Vicarage, Surrey, and Endford Vicarage, Wilts. There are also alternate presentations to Albrighton, Salop; Britteswell Vicarage, Diseworth Vicarage, and Wigston Vicarage, Leicestershire; and to Leiston Church, Suffolk; together with three Exhibitions of 80*l.* to Cambridge, and one of 100*l.* a year to Oxford.

With all these advantages, and the celebrity which the school has always maintained for education and (standing *in loco parentis*) for the integrity of its charity, it is natural that there should be, as there is, a great desire amongst parents to share its benefits,—as well as that men of high station should be found emulous of the honour to be governors at the expense of 500*l.*

The numerous claims for patronage is perhaps one cause why the numbers of *élèves* have been kept full, and even on the increase. But the multiform government is perhaps the cause also wherefore the whole management has been delegated to the staff of almoners, and that the system of education has not kept pace with the requirements of the times: being eleemosynary, poor parents are too happy to partake of the benefit,—rich ones (*if any there be*) would be too prudent to raise a question which might forfeit the sustenance and education of a younger son. No underling dare whisper of a reform,—his stake and forfeit are but too evident. The governors are not all men of education—those who enjoy most of the patronage perhaps least of all,—they are too busy *nominating*.

There is but one individual who could with effect attempt any innovation on old chartered customs, and even he must essay that object with hazard to his position and prospects.

All honour to the man who, standing at the helm of instruction,—charged by his office, as head master, with the education of so important a seminary,—who, obligated also by his professional vows to elevate the moral progress of his pupils, has had the noble spirit to take in hand and urge forward a reform in the sleepy system of a yet monastic school—a system obsolete in other schools, and unsuited to our day.

Of the 850 at the hospital, but very few are entered in the Universities, or passed into the learned professions; the great majority being provided for in trades and pursuits wherein a knowledge of history in the English language, of arithmetic, and of "useful things," are most essential: and yet every blue has to labour through the same course of Greek and Latin classics, cumbering his mind, during his five or six years' sojourn at the school, with an useless lumber of words and their radices! To amend this, and to establish a system of biding and watchful governance over the youth during vacant hours (now wholly neglected), the master spake—but he spoke in vain!

It was Ridley's preaching that moved the heart of our princely Edward VI. to found this and other charities; and the writer (an old contributor to the *Builder*), vouches that he knew little of the governors, nothing of the preacher; but the master, not being able to teach as he would, preached as he should. It was his duty to preach before the governors on an anniversary, when he told them that their system was not only imperfect, but *wrong*. Now, let an extract from the published sermon speak for itself:—"When we mark the vast improvements which have taken place in the education of the lower classes, and are forced to acknowledge that a large mass of our boys would be unable to compete with the scholars of a well-conducted national school;—when we notice the *subjects* which are specially needed for a good modern education, and to fit youths to play their part well in the stir and struggle of commercial and industrial life, and find that these are the very things which a boy at Christ's Hospital has little or no opportunity of learning;—when we are informed that modern languages, various branches of practical or applied science, physical and historical geography, English composition, the history of the British Empire with its colonies and dependencies, elementary art, or drawing on correct principles, are subjects which practical and experienced men are demanding to have taught, in their rudiments at least, to the rising generation; and that the greater part of these subjects are all but absolutely interdicted here;—it *must be owned that there is ample room for something to be done.*"

The government is practically vested in a committee of fifty almoners (*that portion of them* who undertake the administration, and who attend to and watch it): these gentlemen have all the appointments, and have hitherto considered themselves sole arbiters, to *make* or *unmake*. It is incredible, to those unacquainted with boards, what *they* will do and dare! they would, perhaps, have prescribed to the pastor and master what he ought to say in addressing *them*: he looked to a master greater than they—the power to which he was amenable for the right performance of duties. Must a great teacher flatter, as did the nervous poet?—"Semper honos nomenque tuum laudesque manebunt."

It is needless to say more of the issue of this unseemly conflict, for, with the great body of governors, men of high rank, worth, and influence, the right must prevail, as it will on every appeal to the public.

Deferring other details, it may be germane to state that the expense of the establishment (which, although put on an improved and a more liberal footing is extremely moderate), in round numbers stands—

For 1,300 pupils, at 30*l.* each, (including nurture and clothing)	£39,000
For 19 masters, with servitors, &c. only	5,000

The accounts are more detailed in the reports of the Commissioners on Charities.

Very large sums have been from time to time expended on the buildings, which are of a superior order; within fifty years most certainly above 100,000*l.* These buildings are in the heart of the City, and are easily convertible (should the governors, decide to change the location of the Hospital to some of their own freehold lands) into offices for any public department.

At this moment a negociation is on foot to purchase from the Corporation the site of the City Compter, about half-an-acre, in juxtaposition with the school: the *almoners* have offered 15,000*l.* for it: if it is bought, and perhaps 20,000*l.* more be expended in new erections, then the location of the Hospital will be more firmly fixed!

There is yet time, for the almoners are not wholly the arbiters; but if delay be allowed, the Aldermen will assuredly "*nail the Hospital to the Compter!*" As stated before, the buildings, foundation, and grounds are peerless: they are worth 200,000*l.* and over.

The Post-office cost over that sum, and now the swollen body of that mighty engine has outgrown its shell,—there is no other place for it,—approaches on all sides—ample space, and if *utilitarian buildings* only were raised, in addition to the adaptation of those standing, the expense would be comparatively small: lastly, a merchant of the City would almost reimburse the lavish outlay on the (to be vacated) public work—the Post-office.

These hints may be thought intrusive, as they are gratuitous; but as they concern every citizen, they are given by their honorary official,

QUONDAM.

PROGRESS OF BIRMINGHAM.—The number of houses erected within the borough of Birmingham in 1853 was 2,784; in 1854, 2,219. The number of warehouses built in 1853 was 23; in 1854, 35. The number of workshops built in 1853 was 38; in 1854, 52. The number of manufactories erected in 1853 was 22; in 1854, 17. The number of new shop-fronts formed in 1853 was 37; in 1854, 62.

NOXIOUS TRADES AND CELLAR DWELLINGS IN THE METROPOLIS.

DUTIES OF THE DISTRICT SURVEYORS.

A FEW days ago the leading journal gave currency to a statement that, in the case of forty-two of the fifty-five districts under the Metropolitan Buildings Act, nothing has been done to make known or enforce the restrictions on noxious and offensive trades imposed by the Act. "With regard to cellar dwellings, it appears that the president of the Board of Health has received, from an unofficial but trustworthy source, a return, showing that the number of such dwellings in a part of the parish of St. Marylebone alone is 1,132; and, in his opinion, the irresistible inference to be drawn from that and from other circumstances is, that the district surveyors, acting under the Metropolitan Buildings Act, have, with some few exceptions in the case of noxious trades, wholly failed in performing the duty imposed on them by the Act, and that the same conclusion applies as regards noxious trades and cellar dwellings since 1846 to the official referees."

The statement was made originally, it appears, in a letter from the General Board of Health to Lord Palmerston, now first printed for the House of Commons, on the motion of Mr. Alcock; and it will surely be regretted by all who are conversant with the Buildings Act, or take the trouble to look to the particular clauses which refer to these matters, that so sweeping a charge should have been made against a body of public officers on what we think will be found to be very insufficient grounds. As to noxious trades, we do not see any evidence in the return published that the district surveyors, as a body, have permitted the erection of dwelling-houses within the stipulated distance from buildings already occupied for the purposes of the trades mentioned in the Act, or permitted such businesses to be newly established, except in conformity with the provisions of the Act.

Touching the occupation of underground rooms, not in accordance with schedule K, as separate dwellings, section 53, which prohibits the letting of such rooms after July, 1846, directs that on or before January 1st, 1845, the overseers of the poor shall—

"Report to the official referees the number and situation of the dwellings within their respective parishes of which any underground room or cellar shall be so occupied; and that thereupon it shall be the duty of the official referees, and they are hereby empowered, to direct such notice to be given to the owners and occupiers of such dwellings as shall appear to such official referees to be best calculated to give to such owners or occupiers full knowledge of the existence, nature, and consequences of this enactment; and that it shall be the duty of the district surveyors, and they are hereby required, to give full effect to the directions of such official referees in this behalf."

Beyond this, no instructions are given. The Board of Health point to the 68th section, which says it shall be the duty of every such surveyor "to see that all the rules and directions of the Act are well and truly observed" in his district; but the remainder of that clause, which points out what he is to do "for that purpose," shows that his duties refer to *structural* arrangements. There is nothing in the Act to lead to the belief that it was intended that the district surveyors should make periodical inspections of all the houses in their districts, to learn if underground rooms, not in accordance with the Act, have been let as separate dwellings. It is doubtful, indeed, if power be given to the surveyors by any part of the Act to obtain a reply to an inquiry to that effect. The referees, as the registrar states, in a letter to the Board of Health, dated 13th October, 1854, "have hitherto regarded the requirement contained in section 53, as intended to apply only to the notification of the law coming into operation on the 1st July, 1846, and have not considered it their duty, or within their power, to give further directions to the district-surveyors, or to require further returns from the overseers."

Doubtless, the district-surveyors, a body of able and conscientious men, will make a reply to the charge which has been brought against them: in the meanwhile what we have said will suffice to show that we find no evidence in the return made to Parliament to justify the assertion that the surveyors "have wholly failed in their duty."

THE PRESENT POSITION OF ARCHITECTURE.*

IN solving the architectural difficulty of the day, and healing the disgrace of copyism, a field is open for a master-mind, a second Michelangelo, a man of original and lofty conceptions. The architectural Bacon has yet to appear; the destroyer of the old scholasticism, the originator of a "new method." And would that some such luminary might arise, and, like a comet, fearlessly speed into paths never trod before, leaving a brilliant light behind to guide us out of the darkness in which we stand. And till this "consummation devoutly to be wished," takes place, the art can never command the profound and reverent admiration with which it was regarded, when Cheops raised his eternal sepulchre; when Pericles dedicated to Minerva a temple worthy of the goddess; and William of Wykeham, designed his models of Gothic art.

But how, it will next be demanded, is the proposed reform to be carried out? By whose means is such a revolution as the creation of a new style to be accomplished? On whom rests the blame of the present languid and stagnant condition of the art?

Does it not lie on the general public, whose apathy, whose want of taste and knowledge of the subject, and whose very requirements, naturally lead the architect still to tread in the old paths; and in them he will ever continue, till forced by the same public to form, by dint of sheer labour and severe study, a new and worthier course.

It is the community at large, the employers of architects, who dictate the style to be made use of, and who are the judges and approvers of designs; and what is to be expected so long as that community know as little as they really care about the art. They have that little knowledge which *is* a dangerous thing, and which is just sufficient to lead them entirely wrong on the subject. They are told by antiquaries, an invaluable race of men, whose failing is to go back instead of forwards, that the old styles are beautiful, and so the public, without consideration, demand their eternal repetition. Mr. Gally Knight has told us, and the sentiment deserves reiteration, "The arts only flourish where they are appreciated by the nation at large, and where the taste of the public is correct." Buried in the apathy of commercial speculation, all the finer feelings of humanity are neglected.† No progress can be anticipated until architecture is held in higher general estimation, and the public educate themselves into an understanding of it, and an ability to judge of its productions. They are the arbiters and dictators in the matter; the rightful directors of progress; the clients, whose wishes architects must obey. So long as they demand markets in a palatial Italian style, railway stations, the *fac-similes* of Grecian temples, arched Egyptian bridges, Christian churches exactly resembling Pagan fanes, and halls of science like Mahometan mosques, so long will the most absurd anachronisms and ridiculous contradictions be perpetuated by a profession who, to live, must and are condemned to obey the public call. And in demonstration of this our position, permit us to examine into the course of procedure adopted when a structure is required.

Either one architect is selected and commissioned at once to execute the task, or it is thrown open to the competition of several, he whose design is considered the best being rewarded with a premium; and, as a good designer is not always, as things now stand, considered competent to carry out an undertaking, it is oftentimes reserved for consideration whether he shall be permitted to do so. In most instances it is settled beforehand, according to what system the building is to be erected, or, at all events, it is an understood thing that it is to be in one or the other of the orthodox styles.

The architect, it will be perceived, is not at all required to exercise his own ingenuity, to make a call on his inventive powers, to advance upon what has been done, and to produce a result at once directly originated from the requirements set before him. Such a proceeding on his part, such a disregard of precedent, would be considered a heresy rather than a merit, and, if not burnt for his pains, he would be very much sneered at and ridiculed, lose all standing as a man of taste and a venerator of the past, and stand but a poor chance of future employment. What he is now called upon to do is simply this: if his memory is indifferent, and his mind not well stored with the forms he has seen, he looks over his books and the portfolios of sketches made abroad in his youth, and picks out one example as the model to be copied. Or, perhaps, three or four are selected, and parts of each are chosen and put together, with scarce one effort to generate new forms and produce a novel composition. As Mr Pugin has truly observed: "Styles are now *adopted* instead of *generated*, and ornament and design *adapted* to instead of *originated by* the edifices themselves."‡ The rough sketch produced in the manner we have described, is next handed to the pupil or assistant, and fair and detail drawings are made from it, in the most approved manner, after certain fixed rules and regulations deduced, by careful study, from the models themselves.

To such a mechanical routine position is this noble art reduced. No inducement is held out for real thought and composition. The designer, if designer he can be termed, is fettered beforehand; he is actually tempted and encouraged to remain stationary, and content himself with the system of transcription which prevails. If it be true, as Forsyth says, that "deep learning is generally the grave of taste," certainly the modern architect is compelled to bury under a knowledge of the details of other styles, whatever taste for original composition and appropriate indigenous ornamentation, the germs of which he may chance to possess. His reputation must be based, not on his own excellence, but on that of others. He is not called upon to think for himself; his merit lies wholly in the ability to select with care and taste the best features from approved ancient examples; not to look into his own mind for inspiration, but to endeavour to approach as near as possible to the feelings which dictated the ancient fabrics, without considering whether the spirit which prompted their peculiarities should prevail in our own days.

Sometimes, however, but very rarely, the opinion of a professional man is asked as to the style he would recommend. Knowing the unprofitable labour it will entail upon him, he, of course, never dreams of explaining to his clients the necessity of a new method, instead of an eternal repetition of the old ones. The chances are, that so doing would be the signal for his dismissal. But it is also the fact that architects have, generally, a strong predilection for a particular style, which many consider as not merely superior to any of the others, but as the only one which can be decently brought into general use. In this way some will recommend Gothic for all purposes under the sun, no matter how opposed to one another; and Mr. Pugin has gravely told us, that "true principles of architectural proportion are *only* found in Pointed edifices."† Some, again, are enthusiastic for Moorish or Egyptian, and others for Grecian, Roman, or Byzantine art, to the exclusion of every other mode of artistic thought. Thus the profession, compelled so to do by the public, help to continue the present anomalous state of things.

Instances there unquestionably are of men of ability, men who evidently think for themselves, and whose brilliant genius compels us to believe in the still present power and vitality of the art, and that it may be roused from its dormant position.

But we cannot in fairness look to the profession, whose living, whose very existence, is dependent on the favour of their clients, for a complete remedy for the evils stated. The general

---

* See p 682. Vol XII.

† We doubt whether one modern nation can be named more completely absorbed in the pursuit of wealth, and with so little perception of high art as the English people; and certainly no government of ancient or modern times can be mentioned, which, with equal power and influence, has done so little to promote such a taste among its subjects. From the reign of George IV. however, a change for the better may be dated, and the future is full of promise.

‡ "An Apology for the Revival of Christian Architecture." By A. Welby Pugin.

† "The True Principles of Pointed or Christian Architecture." Compare, also, the "Contrasts," in which occurs the remark that—"The excellence of art was *only* to be found in [Roman] Catholicism."

public have it fully in their power to "reform it altogether." They are to blame, and from them must come the impetus which is to rescue the art from its present depressed position. Let them, with more enlarged and comprehensive views, determine no longer to be contented with counterfeits and imitations. Let them institute an experimental competition, and not be discouraged by the first result, but see whether repeated efforts do not tend towards the full and perfect development of a new and superior style of art. Let them, remembering that even the reptile does not endeavour to clothe itself again in its cast-off skin, resolve to reject all designs evidently and professedly copied from antique and other exemplars. Let them no longer encourage the erection of structures which shall be but as the shadows of past ages, aping ancient institutions, and serving only to remind us of this or of that nation's palmy greatness. Let them demand an indigenous style, which shall rise at once out of the peculiar circumstances of modern days. Let them demand edifices which shall *appear* the works of Britons of the nineteenth century, and not the compositions of Egyptians, of Greeks, of Middle Age architects, and of Moors, oftentimes in the last stage of their dotage. Let them do this, and they may confidently trust that architects will nobly respond to the call, will prove themselves equal to the crisis, and demonstrate that theirs is not the art which is fated for ever to stand still.

If what is here penned, in all humbleness of spirit, in the deepest earnestness of feeling, has but the effect of urging one mind to action, of stimulating the zeal of one professional man, and thus in the slightest degree advancing the cause of progress, it will not have been written entirely in vain. EDWARD L. TARBUCK.

PLANK ROADS.

PLANK roads are not known in this country, and it is only in some exceptional cases that they could be economically and usefully employed. With a view to these cases, however, we had jotted down a few weeks ago some gleanings from various authorities as to their history and construction. Since then, Sir Francis Head, in a letter which he has addressed to the Duke of Newcastle, touching the Balaclava Railway Corps, has referred to plank roads, and suggests that they might be occasionally useful in sieges.

The system of plank roads, which originated in Russia, has since been adopted in Canada, and in many of the northern states of America, superseding there the Macadam and Telford rock or gravel roads. The great success and value of the plank road consists in cheapness, ease of draft, speed, and comfort to passengers.

The most approved mode of construction there is as follows:—In a single track, the planks (of pine, hemlock, oak, red elm, black walnut, or sweet gum) should be 8 feet long, and from 3 to 4 inches thick: they should be laid across the road at right angles to its line. These planks are to rest on two longitudinal sills or sleepers, each 4 inches square, bedded in the earth to their full thickness. The earth should be fully kept up to the planks at every point, in order to prevent confined air resting in any vacant space beneath the planks. No pin or spike is needed to confine the planks to the sleepers, their weight being sufficient to keep them firm. There should be placed on the upper surface a coating of sand an inch thick. There should be provided for a single track turn-out places, and to effect this, an earthen road must be banked up, 10 or 12 feet wide on one side, and 2 or 3 on the other. Each embankment should be made flush with the ends of the plank, and thence sloping outwards, so as to carry off the water, as perfect drainage is the great secret in this kind of road. The plank should be laid even, with part of it projecting 2 or 3 inches beyond the general line of the road, in order to prevent ruts made by wheels at the junction of the plank and each turn-out, and if the bed on which the planks are to be laid is a new one, it would be better to be travelled on one season before they are laid down. One track, with the supplementary earth road thus formed, will be sufficient for all ordinary travel, and if the tonnage transported on the road be chiefly in one direction, the track should be laid on that side of the road which will enable the loaded teams to keep it, and thereby force the unloaded ones to do all the turning-out.

To make a double track, all that is needed will be to make two tracks, each 8 feet wide, or one 16 feet wide: the former is preferred. For the 16 feet track, three or five longitudinal sills are required, each to be 4 by 6 inches, laid edgewise, and embedded in trenches 6 inches deep. These trenches should be from 15 to 20 feet long. Great advantage is obtained in the construction of the double track with long plank, by giving the road bed a slight convexity of 2 or 3 inches in the centre, springing the plank down to the outside sleepers, and attaching them thereto by ½-inch spikes or nails 3 inches long.

The duration of plank roads is from eight to twelve years; this matter, however, depends entirely on decay from rot, and not the surface wear of the plank. The sand which is spread upon the track when finished protects the wood from the shoes of the horses, which cause most of the wear. The sand soon penetrates the grain of the plank, until with the woody fibres and the deposits on the road, a tough, elastic covering is formed, whereby the plank is saved from further wear. Experience teaches that one-half the wear and tear of seven years occurs in the first year. Therefore it is a matter of great importance on these roads to have small tollage, in order to invite such an amount of travel as will promote their wearing out instead of rotting.

The cost of the plank road depends greatly, of course, on its locality. But it will be found that the following estimate approximates to an average valuation.

One mile of road with a single track (made with plank 8 feet wide and 3 inches thick) will require 126,720 feet, board measure, of plank; and of sleepers 4 feet by 4 feet, 14,080, making in all of timber, 140,800 feet; which costing (in the United States), say five dollars per 1,000, would amount to the sum of 704 dollars. The laying and loading will cost from thirty cents to a dollar per rod, or from 96 dollars to 320 dollars per mile. The earthwork, sluices, bridges, and water-gullies, admit of no average estimate. Therefore, without them, and 100 dollars per mile engineering, superintendence, and 100 dollars for gate-houses, we have the total cost per mile from 1,000 to 1,224 dollars.

The state of New York was the first to introduce plank roads; and in the course of five years, up to 1852, had extended this species of improvement over a thousand miles, which were completed, and in daily use. The rapidity with which the system has developed itself is remarkable. Plank roads by the side of railroads are wrought in New York, paying 10 to 15 per cent. and carrying passengers at two cents per mile.

In hilly countries plank roads are more necessary and advantageous than in flat ones. One writer remarks, that it is not necessary to produce so low a gradient as one in fifty; one in sixteen is in very common use, and one in ten may be used to great advantage.

The extension of this system is urged with great keenness by some Transatlantic authorities, who contend that in such a country as theirs, the adoption of such roads is of infinitely more importance than railways. Those, on the contrary, who are in favour of the latter system, declare that it is difficult to find an instance in which the construction of a railroad has not benefited the agricultural interests of the country within waggoning distance of the line as well as the towns at its termini.

THE METROPOLITAN ASSOCIATION FOR IMPROVING THE DWELLINGS OF THE INDUSTRIOUS CLASSES.—The directors of this association have just purchased two freehold houses in Bartholomew-close, to contain twenty-four families, and they are about to lay on a better water supply, and introduce other conveniences for the comfort of the tenants. This is the fourth property that this association has adapted, in addition to the buildings erected from the foundation. A portion of the dwellings for sixty families, in Newstreet, Golden-square, is now ready for occupation, and the remainder will be in February next, and accommodation for 108 families in Nelson-street, Bermondsey, will be finished in the spring of next year.

BUILDING NEWS FROM IRELAND.

THE King's room, Mansion-house, Dublin, has lately undergone considerable renewal. Its diameter is 30 feet. The screen has been shortened and the gallery lowered. The interior has been painted, and the canvas roof decorated with panels and a cornice at foot. Pilasters rise from the gallery to the roof, and on the former an ornamental iron railing is fixed. Mr. Hugh Byrne was the architect, and the work was executed by Mr. Murphy, builder.

The spire of the church of Crossmolina was lately struck by lightning, and falling through the roof, demolished the organ and gallery. Several persons were more or less injured.

Messrs. Nagle and Hunt have been declared contractors for the stations at Patrick's Well and Adare, on the Limerick and Foynes line. Mr. Hargreave, architect.

Grants have been made during the past year for the erection of twenty-five new buildings by the Ecclesiastical Commissioners (showing an increase of fifteen over the previous year), for which a sum of 9,659*l.* was set apart, exclusive of 5,421*l.* granted for buildings partially provided for in previous years. Repairs have been ordered in 930 churches, at a cost of 31,261*l.* Several ancient structures have been rebuilt, and new ones erected in newly-formed parishes. The churches of Derryvollen, Lisnaskea, Donamon, Kilnemanagh, Lismallin, Skull, Kilfinane, and Castletown Arra have been completed.

BALMORAL, THE SEAT OF HER MAJESTY THE QUEEN.

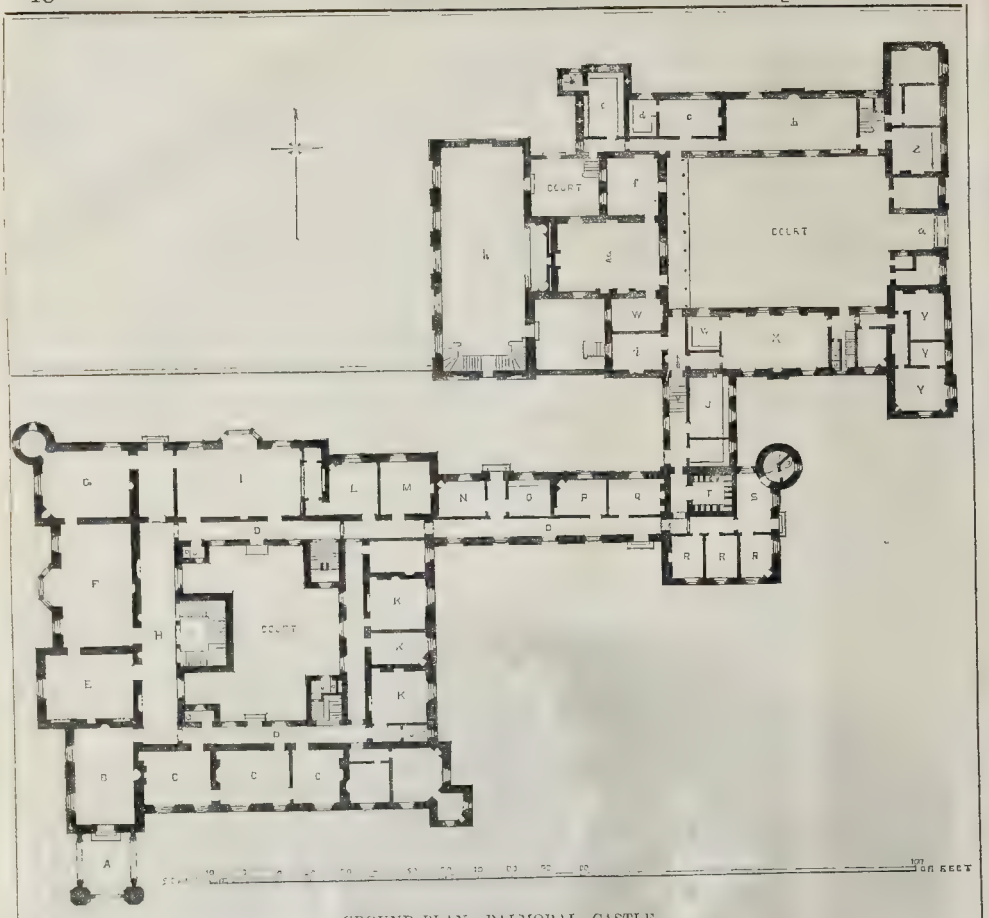
THE mountain home of our gracious Queen and the Prince Consort being now considerably advanced towards completion, our readers will like to know something about it more precise than has yet appeared, and we are glad to be enabled to gratify the wish by giving (exclusively, as in the case of Osborne House), the plan of the principal floor, and a view of the building from the south-east.

Balmoral is in Aberdeenshire, and on the Dee: it is near Abergeldie and Braemar, and was formerly the seat of the Earl of Fife. It is in the heart of a most romantic and mountainous country:—

> "The circling hills all black and wild
> Are o'er its slumbers darkly piled."

It is backed to the south by the hills whereon the father of young Norval fed his flocks,—the granite Grampians, with their frightful precipices, yawning chasms, and rushing torrents; while to the west tower up some of the loftiest and most picturesque mountains in the kingdom,—Ben Muick Dhui, Cairntoul, and Cairngorm,—the mountain of crystals. Amongst these are to be found scenery of the grandest description, views varying in character, from the wild sublimity of utter barrenness to the mild beauty of smiling streams and richly-wooded heights, including,—

> "A stately progeny of pines,
> With all their floating foliage richly robed."



Abergeldie has an old castle: at Braemar a cairn points out the spot where clansmen were summoned to attend by "fell cross of blood and brand;" and in Lumphanan a mound marks where fell Macbeth, notwithstanding Holinshed and Shakspeare (because of Holinshed) give the "honour" to Dunsinane. Aberdeen, the city of "Bon accord,"* the birth-place of Scottish learning, and of Gibbs, the architect, by the way,—is about forty-five miles off to the north-east.

The estate itself includes a ruin and a loch,—loch Muick,—and stretches as far as "dark Loch-na-Garr," made famous by Byron, who spent some of the early part of his life near it, and afterwards sang,—

> "Years have roll'd on, Loch-na-Garr, since I left you:
> Years must elapse ere I tread you again:
> Nature of verdure and flowers has bereft you;
> Yet still are you dearer than Albion's plain.
> England! thy beauties are tame and domestic
> To one who has roved on the mountains afar:
> Oh! for the crags that are wild and majestic,
> The steep frowning glories of dark Loch na-Garr."

Our view will give an idea of the general appearance of the building, which is being erected under the direction of Mr. W. Smith, of Aberdeen. The Scotch Baronial is the style adopted, but in a *modified* form. The west and north sides have received more of the characteristic features of the style than the other two, as our readers will doubtless say may easily be

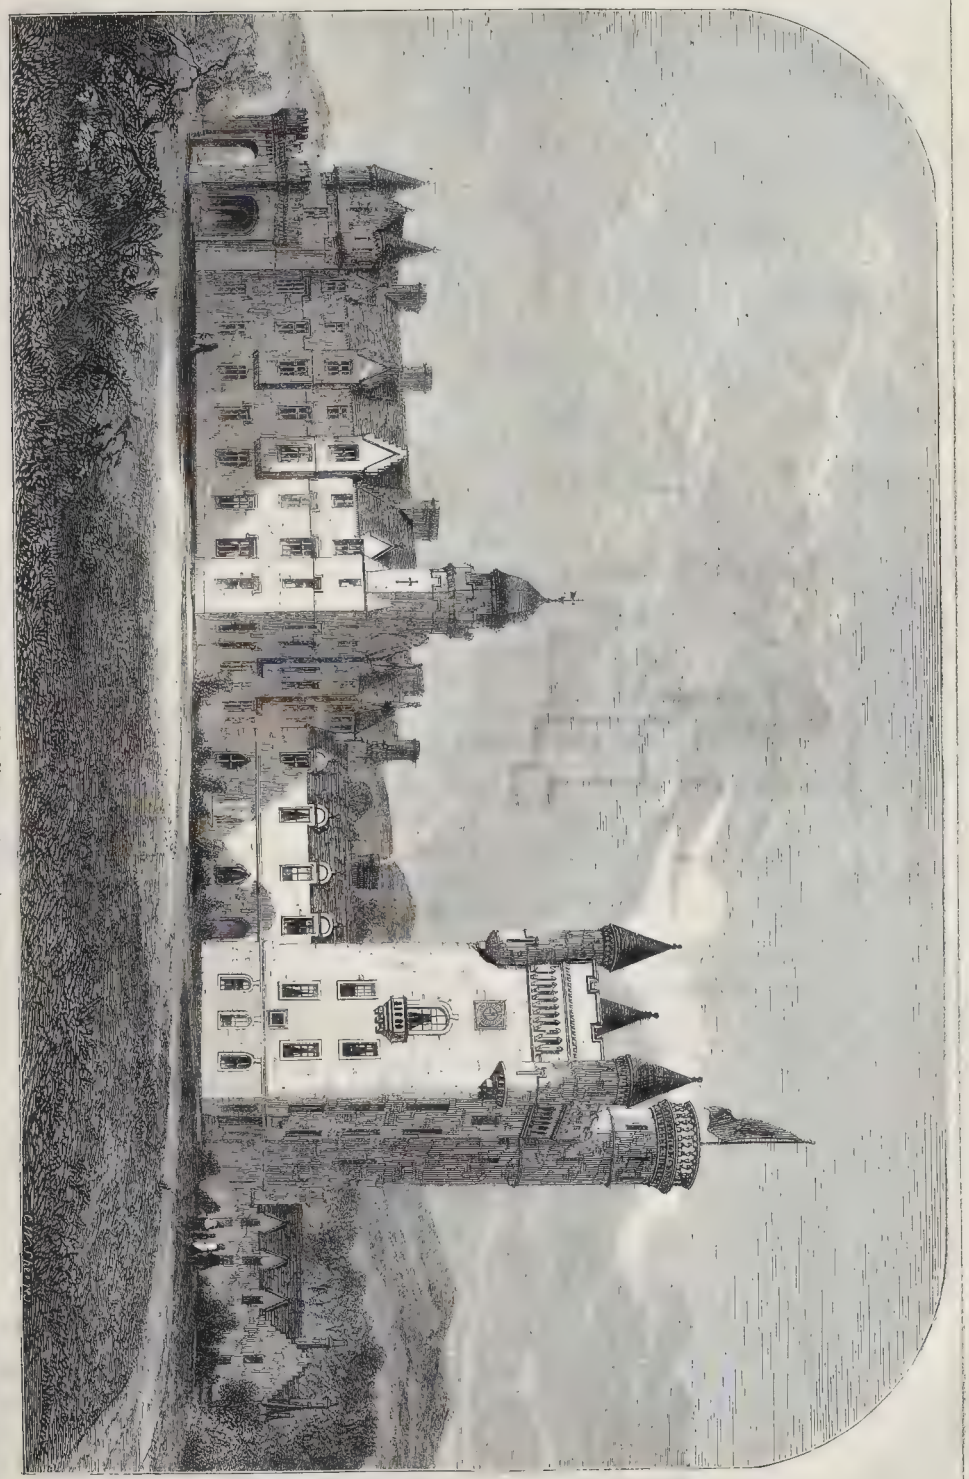
* The people drove the English out of Aberdeen with "*Bon accord*" for the watch-word, and Bruce gave the expression to the town as a motto.

GROUND-PLAN, BALMORAL CASTLE.

the case, and present carved corbellings, rope, ribbon, and other mouldings.

It will be seen, by the plan, that the design consists of two separate blocks of buildings, joined together by connecting wings, at the east angle of which stands a tower 35 feet square, with circular staircase turret rising about 100 feet. This tower and the connecting wing are now only about 12 or 14 feet above ground. The block forming the principal house is, with the exception of the carriage porch, completed *externally*. It is 120 feet one way, and 118 feet 4 inches the other, with a central court 33 feet by 52 feet. At the west angle of the south front are the carriage porch and the entrance-hall, 29 feet 6 inches by 18 feet, leading to the corridor, running behind the principal rooms, which are on the west and north sides; the drawing-room, 37 feet by 21 feet; library 26 feet by 20 feet, and billiard-room, looking towardsthe west; the dining-room, 37 feet (exclusive of recess) by 20 feet, is to the north, where the river is. These rooms are 15 feet high, and above these, on the west side, and extending the whole length of it, are the private apartments of the Queen and the Prince, 13 feet in height. The principal staircase is in the centre of the corridor, and there are two side stairs, one at each corner of the east side of court, all of stone. On the south and east sides of the building there are *three* floors, rising about the same height as the other *two*, and containing rooms for some of the suite, for visitors, for the royal children, bed-rooms, and servants' rooms.

In the square tower will be accommodation for some of the suite, three rooms on each of the first and second floors; and for servants on the lower and upper floors. The whole of the principal house, connecting wing, and square tower, are made fire-proof on Fox and Barrett's principle, with wrought-iron rolled joists. The kitchen offices, forming three sides of a square, and something more, are to be built on a lower level to suit the ground; and the ball-room, 68 feet by 25 feet, is placed also on a lower level, and so as to shut the offices as much as possible out of view from the dining-room windows, and from the terrace running along that side.



The building is entirely of granite: the principal house is of ashlar work, finely dressed, the mouldings being "axed," or "clean dressed." The stone is of very good and uniform colour: it is found in great abundance, and in large masses on the estate. The tower and connecting wing and ball-room are less finely dressed.

The whole of the works, with the exception of the mason's work, are being executed by contract, and are being carried out under Mr. Alexander Clark, the resident inspector, or clerk of works, with whom also, as regards the masonry department, is associated Mr. John Beaton, all of course being under the superintendence of the architect.

Who will blame us if, while speaking of this distant retreat from the glitter and constraint of a Court, where Nature in all her grandeur and vastness insists on being felt, we allude, in passing, to her Majesty's recent message to her soldiers now sick and wounded at Scutari? For the kindly spirit, careless of precedent, which prompted the womanly letter containing it, we venture to express our unfeigned and heartiest admiration. It is to be hoped that this document, so touching in its simplicity, and which is now part of history, will be lithographed in *facsimile*, and distributed throughout the army. It is not a small thing to find sympathy in the highest place.

BAMBURGH CASTLE.—Mr. William Smith, Architect.

A PRACTICAL VIEW OF THE SANITARY QUESTION.

Under this head, the Local Board for the parochial district of Regent-square Church, St. Pancras, have issued their final report, showing that, without any special powers, and at a comparatively small expenditure of money, they have effected a very large amount of good, including "200 cesspools abolished, or in course of removal; 206 foul house-drains renewed, cleansed, or about being so treated; 367 sinks trapped, or about to be; 200 glazed earthenware pans and syphons fixed; 125 closets repaired or rebuilt; 214 closets supplied with water; 198 houses, areas, and yards limewhited; and 34 houses supplied with water by the New River Company."

They have thus, as they say, got rid of 1,017 separate sources of infection. They have also obtained orders to close two large graveyards in the centre of the district.

During the late visitation there were but three cases of cholera reported to the Board, and it is instructive to know that in each of these cases second causes existed to favour the development of the disease, *and the sanitary regulations of this Board had not been enforced.*

In the prosecution of these works the Board have been mainly indebted to a member of the architectural profession; and they end their report with this, to him and them, honourable resolution:—

"That this Board cannot close its labours without recording, in the most emphatic manner, its sense of the valuable assistance rendered to it by Edward Cookworthy Robins, esq. whose unceasing exertions, for a period of twelve months, whilst they have lessened the labours of the other members, have contributed in a remarkable degree in bringing about the important results detailed in this report. For his gratuitous professional services as honorary architect, his zeal and efficiency as honorary secretary, and for his urbanity and gentlemanly deportment to all persons and at all times, this Board begs to tender to him its sincere and heartfelt thanks."

PROVINCIAL NEWS.

Wadhurst.—New schools, with master's house and separate play-grounds, have been built in this parish, according to the *Surrey Standard*, at a cost of upwards of 1,200*l.* The site, with stone for the foundations, was given by Mr. G. C. Courthope; and the whole cost, with the exception of grants of 280*l.* from the Committee of Council on Education, and 50*l.* from the Chichester Diocesan Association, has been raised by private subscription.

Bridgnorth.—At a recent public meeting in regard to the proposed new public buildings and market, it was announced that shares to the extent of about 3,000*l.* were then already taken, and that the theatre site and adjoining properties had been purchased. Resolutions were then carried that advertisements be drawn out for insertion in the public papers, for designs and estimates from parties desirous of contracting for the construction of the various buildings, &c. according to the proposed plans.

Taunton.—The Somerset county magistrates have rescinded a late resolution, adopting the plans of Mr. Carver, for the new shirehall and judges' lodgings. The object appears to be to institute a general competition, the want of which was deprecated. A sum of 16,000*l.* is to be devoted to the erection of the buildings, and the mover of the resolution (which was carried by a majority of 29 to 3), expressed a strong desire to avoid Greek or Roman architecture, and abide by some design of purely English style. He wanted no Foreign Enlistment Bill, he said.

Saltney.—The new church at Saltney, was to be consecrated on the 9th instant. The edifice is small, and of an unpretending character, holding about 230, but easily capable of enlargement hereafter to three times its present size at least, arches and pillars being built into the walls, for the addition of aisles, transepts, belfries, &c. as means and occasion are presented. The general style, chosen by Mr. James Harrison (the architect), appears to be of the thirteenth century. The east window consists of five narrow lights, slightly cusped and pointed, set within what will eventually be the chancel arch. There are in it small medallions of stained glass by Powell, containing emblems of the four Evangelists, and a half figure of the Saviour in the centre light.

Salford.—On Monday before last, a large new general goods warehouse, recently erected for the Lancashire and Yorkshire Railway Company, in Ordsal-lane, Salford, by Messrs. Farrell and Co. contractors, was the scene of festivities in celebration of its completion. The warehouse is 270 feet long, 87 feet wide, and five stories high. Nearly 2,000 persons, consisting of the workmen of the contractors, and the railway company's servants, of all classes, within the district of Manchester, with their wives, families, and friends, were treated by the contractors, in conjunction with the principal officers of the company, to a concert and ball on New Year's-day, in one of the large floors of the warehouse.

Belper.—An address has been issued in which the inhabitants of Belper are informed that steps are about to be taken to raise a commodious public building in that town for literary and scientific objects. An eligible site for the building has been obtained, and already, in answer to advertisements, fifty architects, it is said, from nearly all parts of the kingdom, have signified their intention of sending in plans for the building. Ten guineas will be given for the plan adopted by the committee! The provisional committee referred to in the address have decided that the building shall be raised by shares of 1*l.* each. The building may cost probably from 1,200*l.* to 1,600*l.*: that of course will depend on the plan adopted by the committee. It is not intended to expend a large sum in ornamentation of any kind, but to have a simple, solid, and commodious structure, fitted up with every convenience as a "People's Institute." The land for the site has been freely given by the Messrs. Strutt.

Ecclesfield (Rotherham).—A stained glass memorial window has been erected in the chancel of Ecclesfield church. The window is of three lights. In the middle one are depicted, under niches, two scenes in the history of Lazarus, the one, "Lord, if thou hadst been here my brother had not died;" the other, "Thy brother shall rise again." In the other lights on each side are the emblematic figures of the four evangelists. The artist, whose name is Hedgland, has introduced perspective.

Doncaster.—The new schools which the directors of the Great Northern Railway Company have recently had built for children of the operatives and servants of the company employed here, were formally opened on Thursday in week before last. The building, which is in the Gothic style, and was designed by Mr. Goddard, of Lincoln, the company's architect, consists of three principal compartments, a boy's room, a girls' room, and an infants' room. It is capable of accommodating 500 pupils, and is warmed and ventilated. It has been built by Messrs. Lister and Son, of Doncaster, whose contract amounted to 1,000*l.* The infant school-room will be used for divine service on Sundays until the new church, which has been sanctioned by the Great Northern proprietary, and only awaits the legislative fiat, is erected.

Ripon.—New varnish and colour works were opened here by a festival on 28th December. They are situate on the east side of the town, adjoining the North Eastern Railway. They occupy about two acres of ground, about one-half of which is covered. The offices form the right side of the parallelogram which constitutes the erection. The centre and left consist of a shed and warehouse, covering nearly one acre of ground, supported upon cast-iron beams and pillars, and lighted by windows in the roofs. There are lions couchant on the embattled walls of the buildings. At the inauguration, upwards of 200 persons partook of a repast in the warehouse, which was decorated with evergreens, illuminated with gas, and resonant with a brass band.

Ponteland (Newcastle-upon Tyne).—The parish church of Ponteland, after having been closed for some time (to undergo repairs and re-pewing), was re-opened for divine service on the 24th ult. The building was repaired and re-pewed from plans by Mr. Wardle, architect, at the expense of the parish.

COLOURISTS BY "INSTINCT."

A REPLY.

THE following analysis has been written to correct what I consider the pernicious tendency of the "one-sided" main doctrine of Mr. Ruskin's lecture on colour. It is an insult to address such a doctrine to the workmen of the nineteenth century. It might have sufficed the serf of the middle ages, but the artizan of to-day has been educated by more exact writing and philosophy.

The word "instinct" has always been used to mark a difference in the proceedings of animals from those of human beings. It signifies, therefore, something undeliberative and brutish in opposition to forethought and humanity. If "instinct" were the criterion of greatness, we should be obliged to admit, *à fortiori*, those beings possessing more sensitively developed organizations for seeing, hearing, &c. to be greater than man.

Irresponsibility is always associated with our notions regarding "instinct." Acting by instinct implies the very reverse of acting with the knowledge of good and evil, right and wrong. The irresistible uniformity of impulse termed instinct has not these two motives of rationality to determine its acts; therefore to say that instinct makes a great, good, or bad man, is a misuse of language and a confusion of ideas.

The lecturer might have obtained the true position had he consulted a philosopher or an artist. It is simple enough, viz.—that human excellence is a combination of organization and science. Neither science alone nor organization alone will make a man pre-eminent in any art. Connate organization without science is liable to degradation, when assailed by unfavourable conditions, such as visions, fashions, vicious theories, and quaint precedents; whilst science with imperfect sensibility, less liable to these sources of error, misses those delicate subtleties which can be measured only by organization, and is formal and positive in its combination. To inculcate an exclusive reliance on either organization or science is therefore mischievous; but of the two, the former is the more dangerous doctrine—inimical to improvement, an influence depressing the imperfectly organized, whilst it intoxicates healthy organization with all sufficiency. The ideal of humanity is perfect organization acting right both from feeling and knowledge; or, in other words, when true, sensuous, and scientific motives are identical in act.

Peculiar organization leads to a peculiar course of action,—visually to a peculiar choice of colours, &c. which would be agreeable to all so organized; and there could be no reason why these should not persist in such a "bent," if there were not some criterion of judgment by which to estimate right and wrong. Every instinct would pursue its own course blindly, if there were not a deliberative faculty in human beings to govern and modify erratic tendencies. It is this faculty which establishes science, and enables us to know whether our impulses be just. This is the great difference between a rational and instinctive being, which the lecturer seemed to ignore.

The lecture is inconsistent and self-condemnatory, when reviewed on its own ground. There would be many "good instincts," or the performances of the "instinctively good colourist" could not be appreciated. How is it that these "right instincts" do not become great painters, and Mr. Ruskin the greatest? Many painters who cannot colour well, feel good colour when they see it: many who colour well in oil cannot do so in water colours, and, *vice versâ*. There is then a science of using colours, a science of means: is this, too, an instinct? Why do savages, with exquisite visual organs, tatoo and bedaub themselves, or sculpture and paint hideous images? or how is it that great painters and sculptors are not so frequent in rude as polished ages? Is undeliberative, unerring, unsophisticated instinct, the product only of civilization? or why does Mr. Ruskin's all-sufficing, spontaneous "instinct," deliberate a day about "a single touch." Thousands have the fundamental susceptibility to joy and sorrow necessary to the poet, who are yet unable to write a poem. The lecturer said our soldiers in the Crimea fight from instinct. I

think the fights of Alma, Balaklava, and Inkerman, would have been attended with very different results had Lord Raglan commanded *raw* instinct instead of disciplined troops, unless the bayonet and sword exercise, movement and equestration, are all instincts. The general, and the soldier in the ranks, are equally endowed with the fundamental pugnacity, but the great commander is made by the science superadded.

I conclude, therefore, that the unqualified doctrine that "instinct makes the colourist great," is insufficient and incorrect in expression; and that the word "great," when meaning excellence, can be properly applied only to conscious, and not instinctive rectitude. To have right impulses is good; but to have right impulses, combined with perfect knowledge, is the condition necessary to be "great." The student, however, does not require to be told, that good eyesight is requisite for a painter: he asks for that which was not given in the lecture,—a classification of experience,—the laws of consistent and harmonious colouring, and other things. METER.

THE SCOTTISH EXHIBITION OF ARTS AND MANUFACTURES CONNECTED WITH ARCHITECTURE.

THE opening of this exhibition, it appears, has quite taken the citizens of Glasgow by surprise, from its attractions and its extent, even though still but imperfectly carried out as it is intended to be. The taste for architectural and art adornments was already on the increase at Glasgow, and it is likely to be still further promoted by the new movement. It is not intended that the present exhibition shall be a mere ephemeral display: it is hoped that the inhabitants will enable its promoters not only to secure most of it as the nucleus of a permanent museum of art, but to make other purchases to that end.

We have already given a few particulars as to the building itself, which was erected specially for the Exhibition. The attention of the visitor, on entering the hall, is attracted by a display of manufactures and decorations, arranged in sections, whilst the leading points in the rooms are marked by specimens of Fine Art, groups of statuary, and models of architecture. On the walls are mirrors of large size. One object which attracts attention, near the centre of the hall, is a marble chimney-piece, designed by Messrs. Baird and Thomson, architects, and executed under Mr. Thomson by Messrs Galbraith and Winton. Near this are casts of the statues of James VI. and Queen Anne, prepared for the Houses of Parliament by Mr. Thomas, of London. Over these is a Mediæval decoration, by Mr. Christie, A.R.S.A. of Edinburgh; near which is a large model of the triumphal arch erected at Dundee by Mr. Rohead. Close by is a large fountain of Aberdeen granite, the contribution of Mr. A. S. Dalglish. A cast of the Old Cross of Campbelton occupies a prominent position, and the ancient inscription on it may form a puzzle for the antiquary. Mr. Burnet, the architect, has prepared one of the ante-rooms or courts, and fitted it up as a library. Messrs. Clark and Bell have another of these rooms fitted up in the Italian style. The Grecian room is fitted up under the direction of Mr. Thomson, of Baird and Thomson; and all the windows are to be fitted with stained-glass decorations by Mr. Ballantine, of Edinburgh, and other artists. Glasgow decorators, as well as those of Edinburgh, have contributed largely to the exhibition. A room has been set apart for the collection of carvings in wood formerly in Stirling Castle, and contributed by the Marquis of Breadalbane; casts from the sculptures discovered at Nineveh; and a large collection of casts and drawings chronologically arranged, including the Assyrian, Egyptian, Greek, Roman, and Gothic styles. Among the drawings is a collection belonging to Dr. Pentrick of Berlin, the result of forty years' labour, numbering about 150, which are also arranged chronologically, illustrating mediæval art. A series of drawings, never before exhibited in public, are from the pencil of Mr. Bruce, the Abyssinian traveller, contributed by Mr. Bruce, of Kinnaird. The Duke of Hamilton contributes a design for the façade of the church of St. Mary at Florence, which bears the date of 1514. In the upper gallery, too, are a series of photographs from edifices in all the countries of Europe. There is a collection of about sixty original sketches by David Roberts, which are said to be worth at least 2,000*l*. The sketches by Bruce are valued at 3,000*l*. His Royal Highness Prince Albert has sent a model of York Minster, a design for a cathedral, and another of the palace of Saxe Coburg Gotha.

THE POLICY OF THE NEW METROPOLITAN COMMISSION OF SEWERS.

NOTICE of a motion for January 16th, was given on the 2nd by Mr. J. Thwaites, the object of which is to pledge the Court to what is known as the "Great London Drainage Scheme," which includes two tunnel sewers, extending from Chelsea and Vauxhall respectively, to the marshes east of the metropolis.

At a previous meeting, Mr. F. O. Ward addressed the Court at great length, pursuant to notice, "to call the attention of the Commission to the general policy of the Commission with respect to house drainage, district drainage, main intercepting drainage, and the utilisation of sewage for agriculture; also to submit to the consideration of the Court recent inventions calculated greatly to facilitate drainage operations."

With respect to private house drainage, he said, though there were above one thousand miles of main sewers in London, two-thirds at least (in many districts nine-tenths) of the houses, past which those sewers ran, had cesspools under them; the old policy having been to run sewers through districts, without at the same time abolishing the cesspools and extending branch drains to the houses on either side. The new policy, he said, should be forthwith to remove the excrement, now buried to the amount of a million tons at least, under the houses, within reach of existing sewers, to fill up those horrible pits of filth, and to replace the open privies by water-closets draining into the sewers. This should be done with money borrowed on the security of a private improvement rate, of such amount as to distribute the cost over a term of thirty years. Such a rate would be very light (about 2*d.* her house per week on the average), and as it could be fairly apportioned between occupier and owner, and would put an end moreover to existing charges for cesspool-cleansing, &c. of greater amount than the rate itself, it would be willingly paid for the great benefit secured.

In the case of Lambeth-square, a square of thirty-four small houses, situated near the Waterloo Railway Station, in a low, unhealthy neighbourhood, with imperfect main drainage by tide-locked sewers; a square inhabited by 560 persons of the artisan class, and which had been visited by cholera in 1849, and most fearfully ravaged by typhus in 1852, while cesspools and open privies were retained; but which, having in the autumn of 1852 been fitted with water-closets, draining to the sewer through 4-inch pipes, and the cesspools having been abolished, had not since produced a single case of typhus; whilst last summer's cholera, though it had ravaged the surrounding streets, had left Lambeth-square entirely untouched. Such improvements might be extended within twelve months to extensive districts of the metropolis, comprising probably from 100,000 to 150,000 houses. The expenditure of from half a million to a million sterling in this way, would do more direct and immediate good than any other measure he knew of. And they should do this at once, beginning with those houses, or groups of houses, which the late epidemic had marked out as *cholera-death-houses*, most urgently requiring fortification against future invasions of disease. From 10,000 to 20,000 death-houses should, at all events, be thus dealt with before the next hot season; and such an operation would effect a large reduction in the next year's mortality returns.

As to street or district drainage, it had been urged that it was the duty of each householder to see to the drainage of his own premises; but this, he thought, was an unreasonable requirement, and a system which the experience just cited showed to be practically insufficient to secure the great end in view, viz. the rapid extinction of cesspools. Householders were for the most part persons engaged in the active cares and anxieties of business, totally unacquainted with the principles of house drainage, uninformed as to its importance, and often therefore both unable and unwilling to take the initiative in these subterranean improvements, and to carry on, of their own accord, the campaign against cesspools. If the private house drainage were to be thus abandoned to the piecemeal operations of individual householders, acting each at his own time, and employing each his own bricklayer, another century might be expected to elapse before the work would be done; and when done it would in most cases prove defective, and would be found to have cost three or four times as much as similar works executed in combination, for groups of houses, by contractors responsible to a public body, and subject to the supervision of professional inspectors. It was therefore, in his judgment, an administrative fallacy to separate the private from the public portion of works which were as much parts of a connected whole as the main arteries and terminal capillaries of the human body. He had consulted contractors of large experience in works of this kind, and their opinion was, that if the commissioners provided the capital for private house drainage, and distributed the charge so as to bring the capital back with interest in thirty years, they would meet with no resistance, but on the contrary be welcomed by the householders, who were willing enough to pay for comfort, cleanliness, and improvement rate, generally *less* than their present cesspool-cleansing costs, which the improved arrangements would do away with.

Mr. Ward next adverted to the size of the sewers, which he said was usually excessive, regard being had to the flow of water having in each case to be conveyed away. The old policy, he said, had been based on the assumption that sewers must necessarily accumulate deposit, and that it was therefore indispensable to make them large enough for the entry of workmen to rake out and remove the filth. The new policy, based on an extensive and increasing experience, with perfectly successful results, assigned as the proper measure for a sewer, not the stature of man, but the quantity of water to be conveyed away. At Manchester, for example, where the new policy prevailed, they had sixty acres of house-covered surface draining with success through an oval pipe only 25 inches by 18; while here we had often a man-size sewer to drain a small street. On this point Mr. Ward dwelt at some length, reading portions of a letter he had received from the Manchester Sanitary Engineer, to show the success and economy of pipe-drainage in that town, where oval tubes had been employed as sewers for ten years past, with a saving of about 10,000*l*. in first cost to the inhabitants, and with the further advantage of complete relief, in the streets sewered with these pipes, from the noisome accumulations which abound in the districts drained by large brick sewers. Mr. Ward also instanced the pipe-drainage of Croydon in proof of the success of the new system. The Cholera-morbus, that unbiassed inspector-general, had visited Croydon this year, but which of the houses had he ravaged?—only those not yet connected with the tubular drainage. He had that day seen a letter from a surgeon at Croydon, stating that not a single cholera death had occurred in any one of the tubular-drained houses, and that these pipe-sewers had effected a striking improvement in the health of the population. He was no unreasoning partisan of pipes, but quite recognised the necessity of brick-sewers, and large ones too, to convey away the storm-waters of a vast surface like that of London. Pipe-sewers and brick-sewers, he said, should be employed in their proper places; and he held it absurd to spend many times the needful sum on drainage, by sewering each little street of a town with a culvert large enough to drain the whole; or even with a pipe such as the experience of Manchester showed to be sufficient for the effectual relief of sixty acres. He ventured, with much deference, to submit these two maxims—"Sewers without sediment," and "The concurrent extension of public and private drainage," as embodying two fixed and guiding principles of the new policy to be adopted in this branch of their operations. As to the subject of main intercepting drainage, speaking in a spirit of deference to the great men who had left the sanction of their approval to the scheme of intercepting tunnels now before them, he must declare his opinion, that that scheme, if executed in its present form, would turn out, with reference to the main objects in view, a costly failure. He should reserve, for the special debate on this subject, of which Sir J. Shelley had given notice, the detailed development of his reasons for taking this view; and in the mean time he would only say that these tunnels would not thoroughly accomplish the dispollution of the Thames, nor improve, as was supposed, the levels of the main sewers, nor put an end to the accumulation of deposits, nor effect that beneficial sanitary revolution which powerful organs of the press had led the public to expect. Neither the tunnels, nor the pumping power provided, were adequate to carry away the sewage when swollen by very ordinary showers. Rain coming down, as it very commonly did, at a greater rate than 1-100th of an inch per hour (heavy showers, they were aware, came down at the rate of an inch, and storms at the rate of two inches and upwards, per hour), all such rain, he said, would swell the sewage beyond the discharging power of the tunnels, and the excess would flow, as heretofore, through the existing outlets into the Thames. This circumstance involved the other evil he had mentioned—the non-improvement of the existing levels of the sewers.

The outfalls of the sewers would not, as the public imagined, be lowered, and brought into the deep tunnels. These outfalls would have to be kept at their present levels in order to discharge the excess of sewage, during rainy weather, into the Thames. He believed that no such partial measures would satisfy the public, who would, he thought, justly consider that if pollution of the Thames were wrong for seven days, it could not be right on the eighth; and that, if the retention of stagnant deposit under our houses and streets were a recognised source of disease and mortality, means should be devised for its continual and complete evacuation, at any cost in reason. So again, with respect to the marshy water-logged districts lying near the river, below high-water mark, those districts measured only about 4,600 acres, or very little more than one-tenth the area of the great Haarlem Lake—a lake which covered 45,230 acres, and had formerly an average depth of 14 feet,—which received, moreover, 36,000,000 tons of rainfall per month, besides upland flood, and which had been, nevertheless, dried, and was kept dry, by three steam-engines of 350 horse-power each, worked at an expense of only 4,500*l.* a year.

Sir W. Cubitt and Mr. Robert Stephenson have reported against Mr. Roe's schemes. The conclusions they have come to are,—

"1. That the design of interception proposed by your engineer, Mr. Bazalgette, and Mr. Haywood, the engineer of the City Commissioners of Sewers, is better calculated than any other to effect the object.

2. That the dimensions they have fixed upon for their sewers are not larger than are absolutely required to clear the Thames generally, throughout the year, of pollution.

3. That even with these dimensions, the Thames will, occasionally, during very heavy storms, still be liable to have discharged into it, for a short period, some portion of sewage, but in a highly diluted state.

4. That in the distribution of the areas of interception, your engineers have succeeded in equalizing the duties to be performed by each line of interception as far as practicable, and thereby, in reducing the quantity of the sewage that may, under extraordinary circumstances, be discharged into the river Thames.

5. That, with this view, they have judiciously extended the local district sewer called the Hackney-brook, through Kentish-town and Camden-town, to Kilburn, by which the flood-water, from an area of seven square miles, is entirely separated, and carried away to a point where it cannot, in the remotest degree, interfere with the low districts of the metropolis."

WAR APPLIANCES.

VIGOROUS efforts have of late been made to forward the corps of navvies, with their tools and other materials, huts, clothing, provision, &c. to the Crimea, and also to despatch the wooden huts, stoves, &c. for the use of the army itself. Even the French have been supplied by this country with wooden huts, and ships to transport them in. Mr. Hemming, late of Bristol, received orders recently from Government, at his establishment at Bow, for the immediate construction of sheet-iron stabling for 2,000 horses for the Crimea, to be delivered within three weeks. He has also been supplying the officers with comfortable quarters. Mr. Thomas Bowman, of Gateshead, builder, was lately commissioned by Mr. R. S. Newall, of the Teams Wire-rope Works, Gateshead, to construct for the Crimea, with all possible despatch, two portable telegraph huts, measuring 9½ feet in height, 18 feet in length, and 13 feet in breadth. In about a week, according to the *Gateshead Observer*, these wooden huts were to be completed, and ere now they must be on their way to the seat of war. An electric telegraph, we hear, is to be forthwith laid across the Euxine from Varna to Balaklava, and the Austrian line finished to Bucharest.——We have had various letters from correspondents, complaining of trifling, want of civility, &c. on the part of Government officials, and neglect on the part of Government itself, in reference to offers made to supply various requisites for the seat of war. One correspondent ("P. T."), says, that directly after the occurrence of the battle of Inkermann was known, he offered "to provide huts for the entire army, each to contain sixteen persons, at a cost of 2*l.* per head; to provide suitable barracks, each building to contain accommodation for 200 privates and forty non-commissioned officers, with ample mess-room, at a cost of 6*l.* per head; officers' quarters in barracks, at 10*l.* per head; with each regiment a dispensary and hospital for forty patients, at 10*l.* per head; places of worship for 2,000 sittings, at 30s. per sitting."

——A person at Thrapston, it is said, has invented a wonderful locomotive machine for warlike appliance. We should like to see it at work before founding even a glimpse of hope on promises such as those ascribed to it. That locomotive engines worked by some simple or manageable power, and capable of progression without rails, might be made of vast use in war, however, one cannot doubt; and, perhaps, inventive genius may be stimulated by the aspect of affairs to the realization of such means. It is a curious fact, that the Russians are said to dread some such result, on the part of England, as the invention of tremendous and overwhelming engines of war; and this fact corroborates our idea that the Czar himself is probably more alarmed at the news of our cannon-ball-defying iron floating batteries, now in course of construction, than at any one thing we have yet done, or shown our determination to do, against him. And since the greatest power of this country is its power of mechanism, why should not that tremendous and inexhaustible power be now called forth to the very uttermost for the re-establishment of lasting peace and international justice. Tokens *are* ever and anon turning up of the approach of such a final appeal to mechanical power. The most recent we have heard of is the application of machinery to the formation of offensive weapons, or parts of weapons, hitherto made by hand. Machines have also been quite recently invented for the formation of cartridge-cases, and the war has even stimulated the druggists to the invention of machines for preparing plaster for wounds, &c. We should not wonder even to hear of machines for multiplying machines, wherewith to meet some crying demand for warlike weapons, if peace be not soon re-established.——On reference to the influence of cannon-balls on the resistive strength of stone fortifications, there is one point we have in vain expected to see discussed, namely, the reason why all the combined efforts of the broadsides of at least several war-ships were not concentrated upon one circumscribed spot of some one fortification, such as Fort Constantine. The walls, we were told, of the several forts were peppered *all over* with cannon-balls; but we have seen nothing to indicate that anything like a combined effort was in any case made to batter in one definite and limited spot, say about the centre of the walled surface opposite the ships engaged. Had one decided gap been thus opened, would not a continuance of the same concentrated effort, especially if directed on the mass of wall surrounding the gap, have very soon enlarged its dimensions, and destroyed the whole as a defensible fortification?

THE FOUNDATION-STONE OF ST. GEORGE'S HALL, LIVERPOOL.

IT is recorded in the *Builder* of the 6th instant, that "The foundation-stone (of St. George's Hall, Liverpool) was laid on the 28th June, 1838." As regards the present building this is a mistake. A foundation-stone for an intended St. George's Hall was laid, but not on the site of the present structure; that is, not beneath any of the walls nor within any portion of the existing building. St. George's Hall, as it now stands, has no foundation-stone, the whole resting on brickwork; and, in company with Mr. Elmes, I set the first brick in the year 1841, there being no form nor ceremony of any kind, not even a notice of the event in any local paper. There is thus in Liverpool the anomaly of a "foundation-stone," with its engrossed scroll, engraved plate, coin of the realm, &c. having no building over it; and a building of the same name as the one intended to have been erected, but of greater magnificence, having no "foundation-stone" beneath it. To remove the existing stone will not put matters right, as all the dates and particulars will be incorrect. If the *Builder* notices these facts, the Architectural Society of Liverpool will probably take the question up and settle it one way or other.

R. R.

HINTS ON CHURCH BUILDING.

NOW-A-DAYS, when churches are generally built complete in all points at once, the funds available seldom permit of much or any enrichment.

In the middle ages the erection of a church commonly extended over a lengthened period, and consequently (perhaps) we find them very much more elaborate as to their details than those of modern date.

Might not the example of our ance-tors be beneficially followed in some measure, by all parts of an edifice which are susceptible of ornamentation being left in the "rough" until means can be procured for carrying on or completing the work? Visible progress would be made year after year, for there are few but would gladly increase the beauty of the Lord's House by causing a boss, a corbel, capital, spandrel, or even a single square of diaper-work, to be carved at their expense, and most persons would contribute a small sum yearly for the adornment of their church.

Most monumental tablets, whether inside or on the outside of a church, are a disfigurement, as customarily placed and designed at present, but they might become subservient to the decoration by occupying certain positions, or assuming certain forms: for instance, a simple inscription might be cut in a canopied niche, or on a panel of an arcade, on condition of the niche and part of the arcade being carved according to the design of the architect of the church. Thus an arcade might be carried round the church internally and externally, and each buttress might carry on its face a canopied niche with a modest inscription (not one, enumerating half a hundred virtues, not known to be possessed so long as the person commemorated was alive): indeed there would be no difficulty to a skilful architect, in making each stone of the building, while serving as a memorial, conduce to its adornment. Painted windows are happily taking the place of costly mausoleums. Let the public perceive that the erection of the tower, spire,—the gift of bells, font, pulpit, reading-desk, lectern, reredos, the wood-work or metal-work of the church, the roof, screen, altar-rails, organ, colouring of walls or roof, sedilia, &c. form an equally suitable medium for keeping a person in the remembrance of the living, as a ponderous monument with urns, torches, weeping angels, and other lugubrious accessories—and we should not have our churches, generally, so disfigured, nor so bare, and destitute of ornament.

The adoption of this suggestion, to leave the completion of a church for future years to effect, would, in course of time, give us more beautiful churches, and would be of much real benefit to architects, since it would permit them to give greater play to their fancy than the terms of their usual commission—to produce "the largest church at the least possible cost"—permit.

W. S. M.

Miscellanea.

RAILWAY STATISTICS.—From a return recently issued from the Board of Trade, it appears that the length of railway line open in England and Wales on 31st December, 1853, was 5,811 miles; and on 30th June, 1854, it was 5,965. The number of first-class passengers carried for the half-year ending 30th June, 1854, was 5,615,819; second-class, 15,512,133; third-class, 9,763,290, parliamentary class, 11,087,121; holders of periodical tickets, 9,605; making a total of passengers carried, 41,987,969. The receipt for passengers was, for first-class, 1,106,084*l.*; second-class, 1,304,547*l.*; third class, 385,083*l.*; parliamentary-class, 655,613*l.*; while for the holders of periodical tickets the receipt was 71,186*l.*; giving a total receipt (including 10,837*l.* excess fares, tolls, &c.) of 3,533,452*l.* The receipt from horses, carriages, passengers, luggage, parcels, and mails, was 413,225*l.*; from general merchandise, cattle, minerals, &c. 4,137,898*l.*; giving a grand total of 8,084,475*l.* The money expended by various railway companies in obtaining Acts of Parliament, &c. has been something quite extraordinary, and might itself have almost paid the cost of a line of railway from the Land's End to John O'Groat's House. Not to go so low as anything like a mere 50,000*l.* we find by this return that the Birmingham, Wolverhampton, and Stour Valley Company expended in obtaining Acts of Parliament, &c. 71,776*l.*; the Dublin and Drogheda, 63,569*l.*; Edinburgh, Perth, and Dundee, 135,044*l.*; Lancaster and Carlisle, 80,890*l.*; Liverpool, Manchester, Newcastle, and Carlisle, 94,000*l.*; Northern and Eastern, 73,676*l.*; Shropshire Union, 83,967*l.*! Waterford and Limerick, 80,756*l.*; West Cornwall, 68,594*l.*; and Cornwall, 129,147*l.*! Glasgow and South-Western, 175,804*l.*! Eastern Union, 224,385*l.*!! London and South-Western, 260,819*l.*!!! Great Northern, 683,052*l.*!!!!

ARTISTS' AND AMATEURS' CONVERSAZIONI.—These *conversazioni*—late "the artists,"—are to be held at Willis's Rooms, St. James's-street, on the evenings of the 18th inst. 15th proximo, 15th March, and 19th April. Various honorary members have of late been elected, and endeavours are being made to increase the attractiveness of the meetings and extend their usefulness.

THE WATT INSTITUTION CLUB, AT EDINBURGH.—The first meeting of this new club was lately held at Edinburgh. It has been got up in connection with the Watt Institution and School of Arts in that city. Its objects are,—to do honour to the memory of Watt, by a festive celebration of the anniversary of his birth, being the 19th day of January,—to promote the interests of the Edinburgh School of Arts, by members inducing other young men to avail themselves of the advantages of the institution.—and to provide a fund for the purchase of prizes, to be competed for by students of the school, at the close of the winter session. The club is intended to comprise all who are or have been students of the Edinburgh School of Arts. The only payment exigible under the rules and regulations appears to be an annual fee of one shilling, which we should fear will form too small a fund for prizes, or even for the mere sustenance of the club, itself, from that lapse to which inanition of this kind is but too apt to lead. The design is a laudable one, and it merits success.

Sheffield School of Design Competition.—The advertisement for plans and estimates for the building of the School of Design has been so well responded to (according to the *Sheffield Independent*), that more than 100 have been sent in. The examination of them occupies so fully the time of the council and the principal of the school, that it has been found necessary to defer for a fortnight the usual time of opening.

Art-Unions.—The subscribers to the Liverpool Art-Union assembled on Tuesday in last week, to ballot for the prizes of the year. The chair was taken by the mayor. From the report, it appeared that the amount subscribed during the present year was little more than half the amount of last year. The financial statement showed subscriptions amounting to 343*l*. 10s. 6d.; expenses, 19*l*. 14s. 2d.; leaving 323*l*. 16s. 4d. to be divided in twenty-six prizes, as follows, namely, one of 50*l*. one of 30*l*. one of 25*l*. two of 20*l*. three of 15*l*. eight of 10*l*. ten of 5*l*. and one of 3*l*.——The annual meeting of the subscribers to the Royal Birmingham and Midland Counties Art-Union was held on Thursday in last week, at Birmingham. Alderman Ratcliff occupied the chair. The report congratulated the subscribers upon the success of their operations since the last annual meeting. The sum distributed last year was 315*l*. This year the gross amount of subscriptions is 362*l*. 5s.; The committee recommended that the amount should be divided into twenty-three prizes, namely, one 50*l*. one 30*l*. two 25*l*. two 20*l*. three 15*l*. seven 10*l*. seven 5*l*.

The Electric Light at Westminster-bridge.—In consequence of our suggestion, Dr. Watson, of the Electric Power Light and Colour Company, has entered into arrangements with the Government authorities for applying this novel agency in aid of the operations now in progress for the erection of the new bridge at Westminster, and it is now nightly used in conjunction with Chappuis's reflector. We learn that the patentee has contracted to light Chelsea-bridge by the same means, and we understand that Mr. Whitmarsh, of Paris, has obtained the permission of the Emperor of the French to fix one of these illuminators at the Rond Point, to light up the grand avenue of the Champs Elysées during the forthcoming Exposition in that capital.

Manufacturers' Circulars.—It has often occurred to me that the profession and manufacturers would be much benefited, if the latter were, by mutual arrangement, to publish their illustrated trade lists on paper *of one uniform size*, so that the former could bind them as they accumulate, and so preserve them for reference; but now they are upon sheets of all imaginable dimensions, and their awkwardness causes their destruction. I think the full size octavo would suffice for all trades and wares.—R.

Improved Dwellings and Workmen's Home at Wolverhampton. Pending the establishment of a local association, not yet in action, Mr. G. Skey, one of its promoters, has had erected, on his own account, five dwelling-houses for working men, and also a workmen's home, the latter capable of accommodating twenty-four persons, besides a superintendent. The buildings, which have been erected from the designs of Mr. Banks, of that town, architect, are contiguous, and occupy the corner of a new street leading from Brick-kiln-street to St. Mark's-street. Their exterior, according to the local *Chronicle*, is rather of an ornamental character. The rent for each of the five houses is 3s. 6d a week, and at this rent, it is said, they will make a good return for the outlay. The "Workmen's Home" constitutes a portion of the same buildings.

Exportation of Cement. The Privy Council have revoked their order of the 30th of November last, to prohibit the exportation of Blue Lias, Portland Cement, and other articles commonly used in the manufacture of marine cement, to any place north of Dunkirk.

The Trough Tramway. We all have been reading of the difficulty with which the land-carriage in the Crimea is conducted. A railway is a permanent construction, not capable of being removed. Why could not the trough rail be introduced? it would be simply flat sheets of iron curved at the sides like a house-pipe, from 4 to 6 feet long, and rest on the mud without sinking, on which the wheels of heavy carriages could run with comparative facility; they could be taken up when required, and laid down elsewhere. A couple of dozen of these rails, and a fatigue party to take them up as soon as the wheels had gone over them, and placed in front, would easily remove the heaviest ordnance to any place it might be required: in comparatively hard ground, little stones might be put to keep them true in the balance. They might with advantage be used at home at a field-gate: where the traffic has made deep ruts or honey-pots, little holes could be punched in them to let the rain water through.

Army and Navy Club. Frederick Wilson.

Access to the new London Cattle-market.—The new cattle-market, at Islington, is drawing near completion. Convenient approaches to it for the thousands that will have to attend it on business should be the next serious consideration. There are but two roads from which there will be direct access to the market, viz. Maiden-lane on the west, and the Caledonian-road on the east. Now, if you draw a line from the market in Maiden-lane to Paddington, and from thence take a circle southwards to Brixton, and from thence draw a line to the New-road, at the corner of Penton-street, you will have an area containing the greatest population about London, and for the thousands that will have to attend the new market, the means of access to it are few and inconvenient. Any one acquainted with this neighbourhood will, I am sure, see the necessity (if accident is to be prevented), of diverting some of the additional traffic from this point, viz. King's-cross. Those coming to Penton-street can go along that street, and turning down any of the streets beyond Copenhagen-street, get into the Caledonian-road, nearly opposite the market. To relieve the crash of vehicles opposite the market. To relieve the crash of vehicles at King's-cross, there are three great openings towards the Caledonian-road, that can be made at a trifling expense, and at the same time be a great improvement and ornament to the neigabourhood: 1st, to connect Gray's-inn-lane with the Caledonian-road, by pulling down about six miserable tenements in Chad's-row and the New-road, at the bottom of Gray's-inn-lane. This would make a straight road, or nearly so, from Holborn to the new market; 2nd, to throw down the railings and wall at the end of Cumming-street, and thus connect the road on each side, which would give another access to the Caledonian-road, straight from Pentonville-hill, and, 3rd, to throw down the railings and wall at the end of Rodney street, and connect the road on each side, which would give another and still more direct access to the Caledonian-road from Pentonville-hill. These would be *three* great improvements, and are much wanted.—A Reader.

The Liverpool Timber Trade.—In his last monthly circular, Mr. Edward Chaloner says that the arrivals during the month from British America consisted of sixty vessels, 40,375 tons, against thirty-eight vessels, 29,724 tons, the corresponding month last year. The arrivals during the year consisted of 306,496 tons, against 305,119 tons in 1853. Red pine, from St. John, with cargo, has been sold at 10½d. per foot for small average. The better sizes of oak were sold by auction at 2s. 11d. per foot, and middling at 2s. 6d. to 2s. 7d. per foot. Small-sized elm, from Quebec, has been sold by auction, of 34-feet average, at 21½d. per foot. Ash, with cargo, has been sold at 13d. per foot, retail, 17d. to 18d. per foot. Quebec deals, owing to their scarcity, have been sold by auction, first quality at 15*l*. 15s. to 17*l*. 5s. per standard; second quality at 12*l*. 7s. 6d. to 13*l*. 5s. per standard; third quality at 9*l*. 2s. 6d. to 10*l*. 17s. 6d. per standard. The sales of mahogany end of last month exhausted the stock in Liverpool, excepting curls. There are abundant and very varied arrivals from City St. Domingo and Honduras. The arrivals of Baltic fir timber during the month consisted of four vessels, 857 tons, against twenty-nine vessels, 9,607 tons same month last year. The sales are in small quantities from the yard at 18d. per foot, for middling quality.

Mahogany and Rosewood Sales at Birkenhead.—Several cargoes of Honduras mahogany sold recently at prices averaging from 4d. to 1s. 2d. per foot; St. Domingo from 5½d. to 5s 11d. per foot; and Rio rosewood from 12*l*. to 13*l*. 5s. per ton. Some Bahia rosewood sold from 8*l*. to 11*l*. 5s. per ton, and Honduras at 6*l*. per ton.

Louis the Fourteenth's Building Expenses.—A curious document is reported to have been lately found amongst the papers of a rich Versailles tradesman, recently deceased. This document is an account of the building expenses incurred by Louis the Fourteenth, under Mansard. The account is drawn up by Marimer, a clerk in the architect's employ. The following items are adduced:—Versailles, Marly, and dependencies, 116,238,893 livres; Saint Germain, 6,155,551 livres; Fontainebleau, 2,775,746 livres; Chambord, 1,225,701 livres; Louvre and Tuileries, 10,008,969 livres; Observatory, 725,174 livres; Invalides, 1,718,382 livres; Place Vendome, 2,062,699 livres; Canal de Languedoc, 7,736,555 livres; Gobelins, &c. 3,615,943 livres; on account of manufactures, 1,979,990 livres: total 158,000,000 livres, or upwards of six millions sterling.

Value of Property about Lincoln.—The sale of 170 acres of land at Washingborough and Heighington took place lately at prices regarded as remarkably low, considering the prosperous state of agriculture. 9a. 1r. 29p. of land, with two cottages, were purchased for 480*l*. "A magnificent house" and nearly 31 acres of land went for 1,900*l*. The lowest price of land per acre was about 85*l*.

Improved Dwellings for the Working Classes in Scotland.—Mr. Dunlop, the member for Greenock, has given notice of a Bill to be introduced in the ensuing session, to facilitate the erection of dwelling-houses for the working-classes of Scotland.

Roman Remains at Ipswich.—A tesselated pavement and foundations of walls have been discovered in a field not far from the village of Whitton. The pavement is of varied pattern, and in fair preservation. Various concrete foundations have been discovered in the field, all of them, it is said, decidedly of Roman work, and some of them 7 feet wide. Vast quantities of Roman bricks have recently been dug out.

Weymouth Market-house.—With reference to the fall of a portion of the new market-house at Weymouth, we have received various long statements, and also MS. reports of proceedings of the Weymouth town-council. As, however, we do not see what precise point is made out by these documents, unless it be to hurt the feelings of individuals, we refrain from entering further into the subject for the present.

Consumption of Smoke.—There is an apparatus fixed in my neighbourhood which certainly does not meet the requirements of the Act; indeed, I should not have known there was such a contrivance had one of the men not told me, the street being filled with smoke in the old way. I suppose it depends a good deal on the stoker, in every case that I have to do with it depends more upon him than anything else; indeed, we make a rule, having so many of them, to give a premium to those who do most work with the least coal. The great secret of making the most of fuel is a thin fire and as many openings as possible for oxygen, and that heated to as high a degree as possible without robbing the fire. In the arrangement I have used in all our furnaces for upwards of six years, and never in one instance known them to fail, there is a fire bridge of cast-iron, with ribs on the back; the top part is full of small holes, which divides the air into a jet: there is a fire door, with a number of thin slits in it, with a sliding cover: inside of the door is a piece of sheet-iron, rivetted at top, so that the air in getting to the furnace is rendered hot, and keeps the stoke-hole perfectly cool.—J. W.

Comfort in Churches.—Allow me to call the attention of ecclesiastical architects to the following facts which have been brought under my knowledge:—A small church was built a few years since at a village in Buckinghamshire, and when completed was found to be totally unprovided with means for warming: a stove was therefore provided with a descending flue carried into a *brick* shaft built for the purpose on the outside of the church, with an elegant cowl at its summit. This was found insufficient for the purpose, and smoked to a fearful degree. It has therefore been lately superseded by another stove, with an ascending flue consisting of 13 yards of iron-piping, which is carried from the stove in the middle of the church through a "lancet" window, and rises several feet above the eaves of the roof on the outside. The effect on the architecture of the edifice may be easily conceived. Another church was erected about three years ago in the same county, and only a few miles from the above mentioned. This church, although built under the direction of one of the most eminent church architects, was unprovided with means of warming, and consequently a stove-pipe may now be seen projecting out of an elegant "decorated" window, destroying both the external and internal beauty of a well-designed edifice. Similar cases are of almost daily occurrence. Critics in general are too apt to throw the blame of all this disfigurement upon the parties immediately concerned in perpetrating it; but does not the blame really rest on the designer of the church, who omits what is essential to the comfort of the congregation throughout a large portion of the year, and thereby compels them to take refuge in Dissenting chapels, rather than risk being laid on a sick bed with colds, rheumatism, or other complaints incident upon sitting for hours in a room at a temperature only a few degrees above that of an ice-well? E. W. T.

TENDERS

For completing houses in Priory-grove, West Brompton. Mr. Godwin, architect.

Wilson, S. S.	£3,641 0 0

A YOUNG MAN, who is capable of conducting a JOB, and doing graining, gilding, and plain writing, wants a SITUATION.—Address, stating terms, &c to W. A. D. Mr. Wilson's, 24, Cleveland-street, Fitzroy-square, London.—No objection to the country.

TO ARCHITECTS.

A DRAUGHTSMAN is desirous of an ENGAGEMENT. Is competent in the getting up of perspective, working, and detail drawings, and understands the general routine of an office Kind references can be given to architects in town and country Salary required, 35s. per week.—Address, C. E. R. 63, Post-office, King William-street, City.

TO ARCHITECTS AND SURVEYORS

AN ASSISTANT, well acquainted with the general routine of the Office, is desirous of a RE-ENGAGEMENT References unexceptionable.—Address, S. B. K. 248, High-street, Shoreditch.

TO ARCHITECTS.

A YOUNG MAN, who is well acquainted with the usual duties of the profession, is desirous of entering an office of good practice, where he may obtain further improvement, as part equivalent for his services. Is a good draughtsman, and understands perspective.—Address, ANDRO, City Newsrooms, Cheapside

TO HOUSE PAINTERS AND DECORATORS.

A YOUNG MAN, who has been accustomed to grain, do writings, and to hang paper, is willing to fill up time doing plain work, wants a SITUATION No objection to the country.—Address, stating terms, to M. A. 33, Newman-street, Oxford-street.

A GENTLEMAN, who has been several years in the profession, is disengaged Designs finished, working and detail drawings prepared, with perspectives. Terms moderate. Drawings executed in photograph, of which specimens can be seen on application. Address, A. B 12, Great Coram-street, Russell-square.

TO ARCHITECTS CIVIL ENGINEERS, AND OTHERS.

AN ARCHITECTURAL DRAUGHTSMAN, aged 22, desires a RE-ENGAGEMENT He is well versed in mathematics, and is conversant with levelling, surveying, planning, mapping, and taking out quantities Address, A. G. Messrs. Hookham's Library, Old Bond-street.

TO BUILDERS AND THE TRADE IN GENERAL.

AN experienced CLERK is desirous of an ENGAGEMENT (short or otherwise), to make up books and accounts, or measure works, on reasonable terms, in town or country.—Address P. W. 19, Lower Marsh, Lambeth

TO ENGINEERS AND SURVEYORS.

A QUALIFIED ASSISTANT is desirous of an ENGAGEMENT. Is well acquainted with Water and Drainage Works.—Address, E. A. B. Cit, News-rooms, 66, Cheapside

TO DECORATORS AND BUILDERS.

A YOUNG MAN requires a constant SITUATION. Wages moderate. He is a good pencil hand, gilder, glass embosser, and glass fish writer, and has no objection to fill up his time with house painting. Direct, by letter, to C. J. A. Writer, No. 19, Lamb's Conduit-street, Red Lion-square.

AN ARCHITECT, SURVEYOR, or LAND AGENT'S ASSISTANT is in want of an ENGAGEMENT. Address, per letter, to A. Z. Office of "The Builder."

TO BUILDERS AND OTHERS.

A YOUNG MAN is desirous of a RE-ENGAGEMENT in BUILDER'S OFFICE, who has filled a similar situation with London builders for seven years. References unexceptionable.—Address R. R 12, Albert-road, Sydenham.

TO ARCHITECTS.

A GENTLEMAN, who has been engaged nine years in the profession (four of which have been spent as assistant in a very eminent architect's office in London) is desirous of a permanent ENGAGEMENT. Terms no consequence. Address, ARCHITECT, Mr. Burns's Library, Kennington-green, Kennington.

TO BRICKMAKERS AND OTHERS.

BRICKMAKING.—A Practical Man, thoroughly acquainted in all branches of Brickmaking, is OPEN for a CONTRACT, to do the labour part of a brickfield, or to do the whole at per thousand. The advertiser at present is carrying out a brick contract Satisfactory reason will be given with reference to the employer, where a first-rate sample of bricks may be seen.—Address, A. B. Mr. George Hill's, 23, Hanover-place, Clapham-road

THE Advertiser, who is a good Draughtsman, and accustomed to Working Drawings of all kinds, desirous of an ENGAGEMENT to an office or to superintend Buildings as Clerk of Works, to which capacity he has had some experience. Address, J. C. B. Mr. Beaver's Library, Nelson-street, Greenwich.

TO ARCHITECTS.

THE Advertiser, who has both served his time, and been employed as paid assistant in some of the first London offices, is disengaged to get up for working, and competition drawings and perspectives, exterior and interior, both in line and colour, and is master of all the other general routine of an architect's office, and can produce highly satisfactory testimonials from the above offices, is desirous of a RE-ENGAGEMENT in London, or to get up drawings at his own residence, at moderate term —For particulars, apply to R. S. Office of "The Builder."

LANDSCAPE GARDENER and GARDEN ARCHITECT. Mr W. DAVIDSON is about concluding his engagement with Sir W. F. T. Middleton, Bart. of Shrubland-park, in consequence of the completion of extensive alteration on which he has been employed; and respectfully tenders his services in the above capacities to noblemen and gentlemen, and the public generally, in any thing out of repair pertaining to lawns, parks, cemeteries, arboretums, &c Mr D feels strongly the importance of the opportunities he has had of maturing his taste for natural arrangement and artistic design under Sir William and Lady Middleton, and appeals with confidence to Shrubland for examples of his practical and scientific knowledge as a civil engineer, in directing the satisfactory and economic execution of the various works He begs to mention, further, that this practical experience enables him to offer advice upon all matters connected with a garden, both structural and cultural. Mr D is kindly permitted to refer to Sir William Middleton, Bart. of Shrubland-park, Ipswich, Sir Charles Barry, Westminster, Dr. Lindley, and many others, who are pleased to consider him worthy of their patronage and recommendation.

Shrubland-park, Ipswich, January 8, 1835

TO ARCHITECTS, BUILDERS, &c.

THE Advertiser, who can be well recommended, and has first class testimonials, is open to an ENGAGEMENT as ASSISTANT in the office, or as CLERK of WORKS. He is a good draughtsman and accountant, and has had considerable experience in farm buildings.—Address, R. E. 11, Gayhurst-road, Hackney.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brandi, either in the dry state or ground in Oil.

Zinc Paint being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innocuous qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and by its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

DAMP WALLS.
STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. J. and G. WALLIS, 84, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

TO CONTRACTORS.

THE Advertisers, who have a thorough knowledge of public works in general, having had each ten years' experience upon railways, &c. are wishful to meet with a SUB-CONTRACT, either in England or any of the Continental railways. They have fifty or sixty good masons at their command at any time. Unexceptionable references can be given.—Address H. O. W. Office of "The Builder."

TO RAILWAY CONTRACTORS, BRICK AND TILE MASTERS, AND OTHERS

THE Advertiser is in want of a SITUATION to SUPERINTEND, or take the Work at per 1,000. Understands earthwork in all its details. No objection to go abroad. Apply, by letter, to W. care of Mr. Bishop, Silversmith, Westminster-bridge-road, Lambeth.

TO BUILDERS.

THE Parents of a respectable YOUTH are desirous of placing him in a plous, dissenting family, as IMPROVER to the above business.—Address, X. Y. Z. Post-office, Fenchingfield, near Braintree, Essex.

PHOTOGRAPHIC SOCIETY.—The Second Annual Exhibition of this Society is NOW OPEN, at the Rooms of the Society of Water-Colour Painters, Pall mall East, in the Morning from 10 to 5 and in the Evening from 7 to 10.—Admission, Morning, 1s.; Evening, 6d. Catalogue, 6d.

EVENING INSTRUCTION given in taking out QUANTITIES, ABSTRACTING, MEASURING, and ESTIMATING, on moderate terms, by a practical Surveyor. For cards of address apply to Mr. ROWDON, No. 4, Wilmot-street, Hamsell-square; if by letter, post-paid.

TO CIVIL ENGINEERS AND SURVEYORS.

LEVELLING, SURVEYING, PLANS, and SECTIONS accurately and expeditiously executed. Terms moderate.—Address, Mr. WM. DODD, Jessamine Cottage, Hatton-road, Cheshunt, Herts.

WILLIAM COUCH, 3, Croydon-street, Brunswick-square begs to call the attention of Builders and others to his highly important and economical LIQUID CEMENT, by means of which, he is able to secure buildings from decay and dry-rot. Foundations also rendered impervious to water and damp, which at the present day is so detrimental to house-

W. C. can change any kind of sand or stone-dust into a very durable cement, which becomes benefited by the lapse of time having destroyed the earthy salt, by a cheap process. By means of this he is able to preserve, after the Eastern method, from decay, every description of external work, architectural ornaments, &c. The stuccoed and other fronts of houses can by this process be worked to any pattern of colour or finish, being a process of the Eastern arts never before possessed by any European. It thoroughly resists damp, heat, dry-rot, rust to iron-work, &c.

W. C. has ever been employed with many clever artists of the city of Pekin, capital of China, where he had an opportunity of gaining a thorough knowledge of the above, and many other valuable arts too numerous to mention.

W. COUCH solicits a view of his specimens, he having returned to England after an absence of eighteen years in the East and other parts of the Globe. An Agent required.

COLOSSEUM, Regent's-Park.—Admission, 1s. The original PANORAMA of LONDON by DAY, is exhibited daily, from Half past Ten till Five. The extraordinary PANORAMA of LONDON by NIGHT, from Seven till Ten Music from Two till Half-past Four, and during the evening.

CYCLORAMA, Albany-street.—Now Open, with a COLOSSAL MOVING DIORAMA of the CITY and BAY of NAPLES, MOUNT VESUVIUS, and POMPEII, exhibiting the Great Eruption of '79, and present state of the excavated City, painted by Mr McNevin, from sketches taken on himself in 1852. Daily at Three and Eight o'clock, with appropriate music and description. Admission, 1s. Children and Schools half-price.

BRICKS.—KENT GREY STOCKS on SALE. Also PATENT PERFORATED, and SOLID WHITE SUFFOLK FACINGS. Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

GREAT NORTHERN WHARF, York-road, King's-cross. WHITE BRICK and TILE DEPOT. R. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, beg to inform builders, contractors, and the building trade generally, that they have now on sale at the above wharf, Cowley stocks, grizzles, and place; white cutters, seconds and paviors; oakers, red cutters, and stocks; plain and pan tiles; 9 in. 8½, and 12 in.; white and red paving tiles; blue, red, and white ornamental tiles, blue and red ornamental bricks; Stourbridge Welsh, and Yorkshire fire-bricks, lumps, tiles, and clay; ornamental and other wall copings; Bangor and other slates; stoneware sewer-pipes, bends, junctions, and syphons; closet-pans and traps, terra-cotta chimney tops, trusses, brackets, vases, mouldings and paterae of the most improved patterns. Architects' designs worked to with accuracy and despatch. Lump and ground grey stone lime, chalk lime for plastering, blue lias lump and ground lime, R man, Portland, and lias cements, coarse and fine plaster, laths and hair.

N.B.—30,000 bundles of prime Gothenburg laths are now on sale at the above wharf, price 32s. per load.

GREAT NORTHERN RAILWAY.—L. B. PEARSE and CO. Great Northern Wharf, York-road, King's cross, beg to inform builders, contractors, and others who are engaged in works at or near any of the stations on the above line of railway, that they can be supplied upon the shortest notice with Bricks, Tiles, Lime, Cement, Sand, Plaster, Drain-pipes, Fire-goods, and all other building materials of the best quality at the lowest market prices.

N.B. Orders received overnight can be delivered by the early morning trains.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil cloth coverings; for entrance-halls, passages verandahs, conservatories, &c.

MAW and CO send, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambra Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fire-places and Hearths, Covings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Bathe Dairies, and Kitchen Rances, may be had in great variety at their Warehouse, 9 Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor, and, thirdly, that the "REMARKS on THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 35s. at WARD'S OLD-ESTABLISHED HOP DURAS WHARF, BANKSIDE, London. Builders Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods; Fire Bricks, Lumps, Tiles and Clays. Patent Malting and Covering perforated Tiles, real Dutch Clinkers, River Sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate.—Chief Office, 27, Regent-street.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Paviors, of good and sound quality, constantly on sale at R. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. R. D earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Countinz-house, Hoxton Brickfields, Grange walk, near the Rosemary Branch, Hoxton

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. The Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and FSSEX BRICKS

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c

KENTISH RAG-STONES of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE PLACE, LONDON-BRIDGE.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce that their business, hitherto conducted at 5, Newinatol-crescent, Newington-butts, will, from MONDAY, the 31st inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICKS for OVEN-BUILDING, acknowledged the best for all purposes, delivered, 32s. to London-bridge or Nine-elms; beyond that distance, moderate charge for cartage. Bricks of all description; yellow and light pickings, equal to seconds. Red facings, at 30s. in field; red and glazed pipes, about half the price of stoneware; white and variously glazed in field or by barge; founders' sand and loam; good coloured gravel.—Address, B. PARKS, Lewisham Brickfields.

PORTLAND CEMENT.—D. MOUNTAGUE begs most respectfully to inform the numerous Architects, Contractors, Builders, &c. who have for the last thirty years patronised his Roman Cement, Plaster, and other manufactures that he is enable to supply them with a very superior Portland Cement, warranted to withstand the action of frost, &c. and of uniform colour and quality. Orders received at Pulteney's Wharf, 80, Bankside, Southwark; Harrow-bridge Wharf, Stratford, Essex; and at the Cement Manufactory, Orchard House, Blackwall.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cement, with the addit nal advantage that it greatly exceeds them in its cementitious properties. Due it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements tried at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co's Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SEGONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with it trade certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B MORLEY and CO. and by the Company's Grinding Agents, in London, Messrs. CHARLES DEVAUX, and CO. Wholesale Agents, 62, King William-street, City; JACK and BRADY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 28, and 56 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCIMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their Painters, who will be ready to execute any description of Painting and Decorating with the Pure Patent White Zinc Paint.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westmin-ter; and Seel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the Manufactory, Faversham, Kent. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also of Fine Stucco in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portolano.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO have much pleasure in informing consumers of this valuable Cement that they have, by means of a recent discovery, succeeded in greatly improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are many spurious imitations. The Portland Cements resemblize it only in colour.

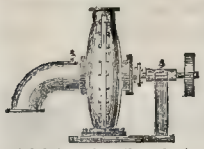
ASPDIN, ORD, and CO beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of the Patent Portland Cement, may be had at their Office, New Wharf, Abingdon street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Nesser. Rosher's Wharf, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the great satisfaction in introducing this Cement to the notice of Builders, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities; resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, it remains hydraulic properties stamp it at once as the Cement of the day for work where all the above qualities are requisite. It is manufacture I on the only principle Portland Cement can be made, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.



PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their friends and the Public that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the well known PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO will be happy to forward prices by post on applicat on, and can offer favourable terms to large purchasers on Jetty-piers.

Dated St. Mary-street, Bridgewater, July 20th, 1854.

BUILDERS, Contractors, Engineers, Brickmakers, Well-sinkers, Plumbers, Brewers, Chemists, Paper-makers, Manufacturers, Proprietors of Coffee, Cotton, Indigo, or Rice Estates, Occupiers or Proprietors of Low Lands, Fens, Marshes, &c, and all persons requiring water or other liquids (hot or cold) raised or forced will find it greatly to their advantage to use GWYNNE and CO'S PATENTED PUMPS, AS FOR ECONOMY, EFFICIENCY, DURABILITY, SIMPLICITY, AND POWER, THEY STAND UNEQUALLED. Water-wheels, Hydraulic Rams, and every description of Machinery for raising water, may be had by applying to GWYNNE and CO, Hydraulic and Mechanical Engineers, Essex Wharf, Temple-pier, Strand, London.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump £1 12 0
Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing 2 12 0
Larger sizes if required.

The smaller sizes are also much used for supplying H. S. Forges, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS, 8, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, at 17s.

The usual allowance to the trade.

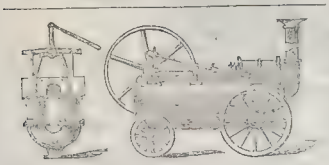
PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for square and market-places, roads, conservatories, liquid manure, ships, barges, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

PUMPS on HIRE! The largest stock in England of single and double pumps, from 4 in. to double 12in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

HENRY FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitehart-street, Fleet-street.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

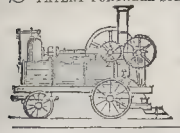
Pumps in Wrought and Cast Iron and Brass, bored to machinery and fitted in the best possible manner, suitable for excavators, trade, breweries, farms, canals, docks, lead-mines, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.



PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.



Iron Pails 36s per doz. painted.
Ditto .... 44s per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong wagon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS, Engineers and Portable Engine Makers, 99, Blackfriars-road. These engines have been successfully employed for years.

WM. HARRIMAN and CO. FIRE-BRICK and SANITARY TUBE WORKS, Blaydon, Newcastle-upon-Tyne.

A reduction of 25 per cent has been made on the premiums of all policies of five years' standing.

ALEX. ROBERTSON, Manager.

THE ALBERT ASSURANCE COMPANY.
(Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square.

W. S. VARDY, Manager.

MUTUAL LIFE ASSURANCE.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.

HEAD OFFICE 28, St. Andrew-square, Edinburgh.
LONDON 126, Bishopsgate-street.
Instituted, 1831.
Incorporated by Special Act of Parliament.

The Profits are divided every Three Years, and wholly belong to the Members of the Society. The next division takes place at 1st March, 1856

EXAMPLE OF ADDITIONS

On a Policy for 1 000*l.* dated 1st March, 1832.

1,223*l.* 8*s.* will be payable if it become a claim during the current year, after Payment of this year's Premium. This is an addition of more than Fifty per Cent on the Sum Assured, and averages 2*l.* 3*s.* 7*d.* per cent. per annum.

Supposing such a Policy to have been effected at the age of Thirty, the additions might now be surrendered for a present payment of 221*l.* 7*s.* 10*d.* or if applied in reduction of the future Premium, would reduce the Premium from 22*l.* 10*s.* 10*d.* to 6*l.* 3*s.*; and even this small payment must be reduced every Three Years during the subsistence of the Policy.

Amount of existing Assurances	£4,234,898
Annual Revenue	182,615
Amount of Accumulated Fund	839,364

Copies of the Annual Report, Forms of Proposals, and all information, may be had on application at any of the Society's Offices in town or country.

W. COOK, Agent.

126, Bishopsgate-street, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, superior tone, truer in form, and at less cost than has heretofore been compatible.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, suitably or in pairs.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Hall's and Pinsutti's supplied with the above and other Filters at trade prices. The Filter, at one, two, three, and four gallons a day, 10s. 6d., 15s., 21s., and 30s. each per dozen, will be found sufficient for ordinary domestic requirements; are self-acting, and reliable to keep in order. References to parties satisfactorily supplied with quantities up to 5000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 22.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON, Brass and Iron Founders, Short-street, New-cut, Lambeth.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. Country Agents, and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established in 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hose-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for metallic tables.

India-rubber of any or make, and improved Vulcanized Rubber Suppliers for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any length. Air-cushions, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mew, Goswell-road, London.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

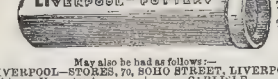
F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, 36 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as our Agents work in Great Britain who cover the above roofing is made are F. McNEILL and CO'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.



DOULTON AND WATTS,

LAMBETH POTTERY, LONDON.

REGISTERED CLOSET-PANS IN ENAMELLED STONE WARE.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S.

STONE WARE PIPES, BENDS JUNCTIONS TRAPS, &c.

TERRA COTTA VASES, CHIMNEY-TOPS, &c. FIRE-CLAY FLUE PIPES

May also be had as follows:—

LIVERPOOL—STORES, 70, SOHO STREET, LIVERPOOL.

GLASGOW ..... J. A. Mathieson, Hope street.	CARLISLE ..... C. Armstrong, Lowther-street
DUBLIN ..... Robt. Lovely, Poolbeg-street.	WHITEHAVEN ..... Hugh Todhunter.
CORK ..... W. D. Brash, Dean-street.	COCKERMOUTH ..... John Hird.
WATERFORD ..... J. Sparrow and Co	GUERNSEY ..... Guerin, Brothers.
CARNARVON ..... Jno. Jackson.	LONDONDERRY ..... W. and A. M'Elwee.
FIRESTON ..... J. Armstead, Hudson-street.	WIGAN ..... James Fairclough, King-street.
KENDAL ..... Robt. Thompson.	LIMERICK ..... W. Burgess and Sons.
BLACKBURN ..... W. Hopwood, Clayton-street.	

The most economical and efficient system of drainage is formed with DOULTON'S STONE-WARE PIPES.
Testimonials as to their superiority have been received from the Borough Engineers of Liverpool, Glasgow, and other cities.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 4s per foot super together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention. WILLIAM PIGGOTT, 213, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

CHIMNEYS.

MOON'S CHIMNEY CONTRACTOR, REGISTER, and CHIMNEY BAR COMBINED. The contractor assists draught; the register admits of being partially or wholly closed; it is cleanly, simple in construction, and cannot get out of order.

Manufactured by PARRY, of 105, Gilden-lane.

MOON'S DWARF-COVERED CHIMNEY-POTS, open on two sides, which affords an efficient outlet for the smoke, whilst the two enclosed sides and top form a guard from the wind. The pots being very distinct, prevent the flues affecting each other. The dwarf size nearly conceals them from view, and thus avoids any disfigurement to the chimney-shafts.

Made by DOULTON, of Lambeth.

Specimens of the above are to be seen at the Architectural Exhibition, Suffolk-street, Pall-mall.

HOLBORN-HILL,—a REMEDY for its ILLS.—MOON'S MODEL of an amended DESIGN for the proposed VIADUCT at this locality, may be seen at the Architectural Exhibition, Suffolk-street, Pall-mall.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WIND GUARD.—This Guard allows free access to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill. NORRIE and CO having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

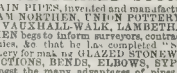
VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 158, Blackfriars-road, and 117, Union-street, Borough, and of all respectable ironmongers, builders, &c.



VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

AGRICULTURAL LAND DRAIN-PIPES of all sizes, and in any quantities, may be obtained of L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross.

SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppages in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:

Rosser and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank. Martin and Wood's Market Wharf, Regent's-park Basin. J. C. Bellhouse, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street. C. Richardson's South Wharf, Paddington. G. Errington, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Canal Wharf, Hammersmith.—J. Corbett's Depôt, Britton-street, Chelsea; and at the Pottery.

JENNINGS'S PATENT DRAIN-PIPES

REMOVE THE OBJECTIONS TO PIPE-DRAINAGE.

At the Institute of Engineers, during the discussion on Pipe-drainage, Mr. Robert Stevenson, when speaking on the subject, said, "He looked upon the Pipe-drainage of a Town as one HUGE MACHINE, *that was neither capable of Examination nor Repair."*

THE OLD-FASHIONED AND HALF-SOCKET PIPES CANNOT BE EXAMINED without taking up one or more Pipes, thus DESTROYING THE LINE OF DRAINAGE, and saturating the sub soil.

Practical men will see, by comparing JENNINGS'S DRAIN PIPES with the Half-socket Pipes, that the former can be examined, by simply excavating down to, and removing one of the small junctions.

To remove a Half-socket Pipe the excavation must be THREE TIMES AS LARGE, and the relaying of the Pipes, or making the Joints (OWING TO THE ESCAPE OF SEWAGE a matter of much difficulty.

JENNINGS'S PIPES can be examined without checking the flow of sewage, or disturbing the invert or general drain, and junctions can be introduced at any joint, by removing a plain saddle, and exchanging it for a saddle having a junction formed in it of the required size.

By the use of JENNINGS'S PIPES, the work of supervision is lessened, and good work ensured, as any length of Pipes may be laid, which can be examined at the convenience of the superintendent before the trains of the saddle-pieces.

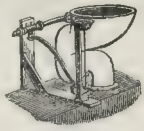
The favour with which these Pipes have been received, has induced the Patentee to commence the CONSTRUCTION OF THE LARGEST PIPE-WORKS IN THE WORLD; and, by the aid of screw-steamers and railway facilities every Town in the United Kingdom will shortly be supplied with these Improved Pipes, SAME PRICE AS ORDINARY SOCKET-PIPES.

A List of Agents will then be published.

To meet the views of all interested in Sanitary Progress,

GEORGE JENNINGS PROPOSES TO MANUFACTURE THE OLD-FASHIONED SOCKET-PIPE GLAZED AND UNGLAZED.

AS ALSO

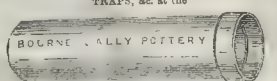


A VARIETY OF USEFUL ARTICLES IN EARTHENWARE, HITHERTO NOT ATTEMPTED.

JENNINGS'S PATENT CLOSETS, TRAPS, SLUICE-VALVES, &c.

ARE FREE FROM ALL COMPLICATION. NO WIRES OR CRANKS.

ANY NUMBER OF CLOSETS SUPPLIED FROM ONE SERVICE-PIPE, AND THEY ARE AS READILY FIXED AS A COCK TO A SINK, UNDER HIGH OR LOW PRESSURE.



Architects furnished with references of the highest order.

Particulars of JENNINGS'S DRAIN-PIPES, WATER-CLOSETS, URINALS, LAVATORIES, SLUICE-VALVES, FIRE-COCKS, GULLY-TRAPS, SHOP-SHUTTER SHOES, &c. &c. can be had free on application, or by post if two postage stamps are inclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, Great Charlotte-street, Blackfriars-road.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET;

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset: they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

THE AGENTS:—

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;

Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;

Where a large stock is always kept on hand.

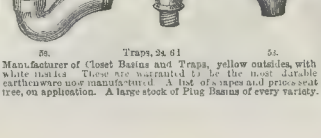
THE FARNLEY IRON COMPANY, WORTLEY, near LEEDS.

Manufacturers of FIRE BRICKS, TILES, QUARRIES, &c., White Building Bricks, Fire-clay CHIMNEY-TOPS, in Norman, Egyptian, Saxon, Tudor, Grecian, Gothic, and Elizabethan styles.

TERRA COTTA

Fountains, Vases, Pedestals, Capitals, Trusses, Brackets, &c., in great variety, which for beauty and elegance of design are unequalled. The designs of Architects modelled with the greatest exactness.

Also of PATENT GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, &c., well adapted for pressure, being made extra pressed under "Spencer's Patent." Superior White Glazed CLOSET PANS, TRAPS, &c.



The Works of the Company are situated in the immediate vicinity of the well-known bed of WORTLEY FIRE-CLAY, and their manufacture of BRICKS, for the use of Forges, Gas Companies, Foundries, Potteries, and Glassworks, is confidently recommended for all purposes where extreme heat is required. Their GROUND CLAY is also particularly adapted for the manufacture of CRUCIBLES, MELTING POTS, &c.

OFFICES AND STORES:

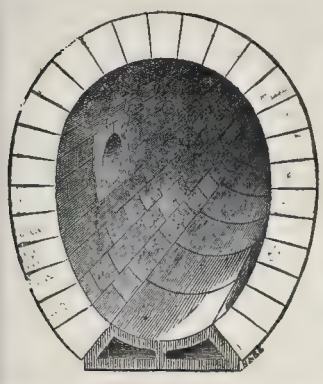
5s. Traps, 2s. 6d. 5s.

Manufacturer of Closet Basins and Traps, yellow outsides, with white inside. These are warranted to be the most durable earthenware now manufactured. A list of sizes and prices sent free on application. A large stock of Plug Basins of every variety.

MILL-WALL POTTERY (near Scott Russell's).—Messrs. WILLCOX and CO. Invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London. Particulars forwarded on application.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES FREEMAN ROE'S Patent Sluice-valve can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

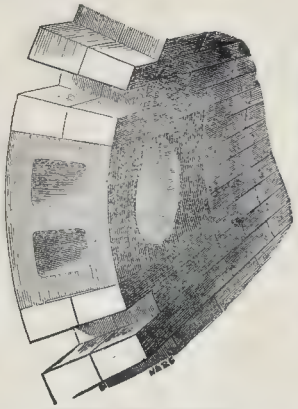


TO BUILDERS AND OTHERS.

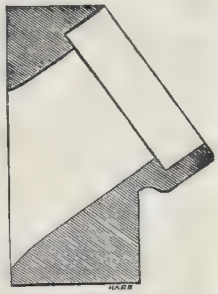
DRAIN-PIPES, JUNCTIONS, PANS, TRAPS, &c. at very low prices.—E. & W. STURGE, Bridge Wharf, City-road. Paving, Sinks, &c. Duchess, countess, and ladies slates. A list of prices sent free on application.

HENRY DOULTON AND CO.'S
PATENT SEWER JUNCTION BLOCKS AND INVERT BLOCKS,
IN GLAZED STONE WARE,
HIGH-STREET, LAMBETH, LONDON.

The connection between pipe drains and sewers, and brick sewers, is made perfect and secure by the use of DOULTON'S PATENT JUNCTION BLOCKS. Each block is made to correspond in thickness with the sides of the brick sewer, so as to build or bond in with the brickwork; the inner surface is made to correspond with the internal figure of the sewer. Each block has a socket, either within its thickness or just protruding beyond it, to receive the end of a pipe. They are made to receive pipes, entering either straight or obliquely. When fixed, they form part of the sewer, they cannot be improperly placed, and a certain and proper fall is secured at the point where the junction is made.

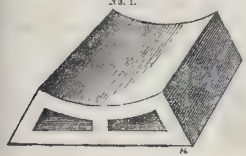


THE PATENT JUNCTION BLOCKS MAY BE FITTED WITH METAL FLAP-TRAPS IF REQUIRED.



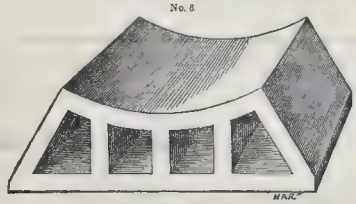
Egg-shape Sewer, with DOULTON'S PATENT JUNCTION AND INVERT BLOCKS

Section of STRAIGHT JUNCTION BLOCK.



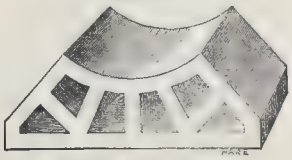
JUNCTION BLOCK as fixed in Sewer.

Section of OBLIQUE JUNCTION BLOCK.



DOULTON'S INVERT BLOCKS, in stone ware, form a glazed, even, and imperishable surface for the bottoms of brick sewers, and also a sure foundation for the structure. They have been used extensively by the Metropolitan and City Commissioners of Sewers, and for the main sewers in many provincial towns, and in all cases have been highly approved by the engineers, both for the facilities they offer in the construction of sewers, and for their subsequent action in permitting an easy and uninterrupted flow of the sewage matter. They offer the means for carrying off all superfluous water while the sewer is in course of construction, and when required give a channel for land drainage independent of the sewage.

No. 1.



Radius of Invert 9" for 18" Circular Sewer, or 3 ft. 9in. by 2 ft. 6 in. Egg-shape. 4½ in. work.

No. 6

Radius of Invert 15" for large Egg-shape Sewer. 9 in. work.

No. 5

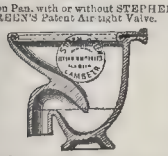
Radius of Invert 9" for 3ft. 9 in. by 2ft. 6 in. 6 in. work.

A full description, with sizes and kinds of both Junction and Invert Blocks, forwarded on application, per post.

DOULTON AND CO.'S CLOSET PANS AND TRAPS, IN ENAMELLED STONE WARE, WHITE INSIDE, 7s. 6d.

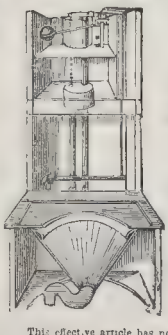
DOULTON'S HALF SOCKET DRAIN PIPES,

BY THE USE OF WHICH, PIPES MAY BE REMOVED, THE DRAIN EXAMINED, AND JUNCTIONS INSERTED WITHOUT INJURY TO THE TUBES, THE SAME PRICE AS ORDINARY SOCKET PIPES.



For List of Agents, see "Builder" of November 18. Drawings, with prices, forwarded on application.

Superior Glazed Stoneware Pipes, Bends Junctions, Traps, &c., Ropeyand other Pans, with best White Glazed Inside.



Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin, the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Selfacting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Gonnel's Registered Model Water-closet." This water-closet is the most simple and efficient yet introduced for high services, and for fixing without the usual service-box, cistern-work, &c. From its construction all possibility of external leakage is prevented.—A sinkram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers. Sole Agents, L. B. PEARSE and Co., Great Northern-wharf, York road, King's-cross.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from £3, and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 29, Old Fish-street, near St. Paul's, London.

SALES BY AUCTION.

TO SHIP-BUILDERS, TIMBER-MERCHANTS, AND OTHERS.—Dunlongren, near Sevenoaks, Kent

MR. WILLIAM HODSOLL will SELL by AUCTION, at the ROSE and CROWN Inn, Dunlongren, on FRIDAY, JANUARY 30, at THREE o'clock precisely, by order of the proprietor, John Weiford, Esq., 128 superior OAK TIMBER TREES, of large dimensions, standing on the Brasted Estate, in the parish of Ightord. The timber is of excellent quality, and is approximate to the high road from London to Sevenoaks. May be viewed on application to JESSE BROOKS, at Brought-a-Down House, Riverhead; and catalogues may be had at the principal Inns in the neighbourhood, at the Place of sale, and of the Auctioneer, Farnborough, Kent.

MOST ELIGIBLE BUILDING INVESTMENTS.—Borough of Dorchester. TO BE SOLD BY AUCTION on Tuesday

MESSRS. BAKER and ENSOR, at the GUILDHALL, on WEDNESDAY, 21st JANUARY, 1855, at ELEVEN o'clock in the forenoon (subject to such conditions as will be then and there produced, and that PIECE or PARCEL of PASTURE LAND, known as the long gate in Wollaston Field, with the sand hole and, containing about 4a. 3r. 23p. situate on a gentle slope, and remarkably adapted for building purposes. This land is the property in possession of the Corporation of Dorchester, and it is intended, with the approval of the Lords Commissioners of Her Majesty's Treasury, to offer the same for sale in lots, for absolute terms, at nine ensuing years, subject to certain fixed ground rents, and to the obligation on the part of the several purchasers, to build a dwelling-house with the offices and outbuildings thereon, according to certain plans, elevations, and specification, which will be prepared by the Corporation. The houses and offices proposed to be erected will be of several classes, so as to meet the growing requirements of the town, and from the well known fact of house property generally in Dorchester being far more valuable than it is in any other provincial town, no reasonable doubt can be entertained that such a building speculation as that now offered to the public will be highly remunerative. The plans, elevations, and specifications above referred to, together with the conditions upon which the same will be held, and a draft of the proposed agreement, may be seen on application to Mr. Hyam Hyam, of No. 11, Thornhill-square, Islington, London; or to Mr. Symonds Town Clerk of Dorchester, on and after the 27th day of JANUARY, 1855.

Dorchester, 2 st Dec 1854.

TO BUILDERS, CONTRACTORS, AND OTHERS.—500,000 capital BRICKS, to be SOLD by AUCTION, by

MR. GEORGE DOUGAL (in conjunction with Mr. BOYCE), of the York-road, on THURSDAY next, JANUARY 18th, at TWELVE, in the FIELD Row by Sidney Place, Islington, Wednesday, in lots as to suit purchasers.—Catalogues forwarded free on application to the Auctioneer, 84, York-road, Lambeth, and of Mr. Dougal, Whitminster-road

Jordan's Patent Wood Carving Works, Baldlane-road, Lambeth, close to the Hungerford Suspension-bridge.—Imitative Stock of valuable Carvings and Timber, including a quantity of Dry Oak and Mahogany

MESSRS. OXENHAM and SONS will SELL by AUCTION, on the PREMISES, on MONDAY, JANUARY 29th, and following days, at ELEVEN for TWELVE punctually each day, the valuable and well CARVED PANELLED and other OAK FITTINGS, the ornamental and richly CARVED PANELLED and other OAK FITTINGS, the ornamental and richly CARVED PANELLED and other OAK FITTINGS, the ornamental and richly

COMPETITIONS.

SHEFFIELD NEW SCHOOL OF ART.—To ARCHITECTS. The COUNCIL having decided on the adoption of the PLANS for the NEW SCHOOL, have determined publicly to exhibit the whole of the Plans in the Council Hall, Sheffield, on WEDNESDAY, the 31st instant, and the two following days. Any competitors objecting to the exhibition of their Plans, may withdraw them by application to the Honorary Secretary, on or before the 30th instant.

By order of the Council,
B. WIGHTMAN, Hon. Secretary.

Sheffield, Jan. 17, 1855.

TO ARCHITECTS.

£5 PRIZE, ABERYSTWYTH.—The Commissioners of this Town are desirous of obtaining DESIGNS for a CLOCK-TOWER, which they purpose erecting on a suitable site; the base not to exceed an area of 14 feet square, and the outlay limited to £600. The above prize will be given to the architect whose design and specification shall be approved of and selected. Unsuccessful competitors will receive no remuneration, but their drawings will be returned to them. Plans, &c. to be sent to me, the undersigned, before the 30th JANUARY, 1855.

W. L. THOMAS, Clerk to the Commissioners.

Laura-place, Aberystwith.

TO ARCHITECTS.

THE DIRECTORS of the BRIDGNORTH PUBLIC BUILDINGS and MARKETS COMPANY, are desirous of receiving DESIGNS and ESTIMATES for the ERECTION of PUBLIC BUILDINGS, to include accommodation for the butchers, fish, vegetable, poultry, butter, and other markets, a large room for lectures, and music, reading-room, and rooms for the sitting of the magistrates. A premium of £20, will be given for the most approved design, and £10, for the next best (the first not to be paid for the most approved plan, if the person drawing that plan should be employed as architect in the erection of the building). The plans and estimates must be delivered at the Office of Mr. GORDON, Solicitor, Bridgnorth, the Secretary, on or before TEN o'clock a.m. on SATURDAY, the 3rd day of FEBRUARY next, from whom a plan and section of the intended site may be obtained, together with any particulars that may be required, upon payment of one shilling.

COMPETITIONS.

DESIGNS WANTED.—PUBLIC PARK for EDINBURGH.—The Commissioners of Police for the City of Edinburgh being now prepared to lay out the "MEADOWS" as a PUBLIC PARK, in terms of the conditions of their lease, have resolved to request COMPETITION DESIGNS, with specifications and estimates of probable cost. A premium of £50 will be awarded for the design which the Commissioners may select as the best, and a premium of £20 for the second. The designs to be lodged at their Office on or before 1st MARCH next, each marked with a distinctive motto, and accompanied by a sealed letter address'd to the Clerk, containing the name of the competitor, and having reference to the design and its motto. A plan of the ground, and copy of the conditions of lease, may be had on application to the Clerk, who will also furnish any further information necessary. The Commissioners are not to be bound to adopt any of the designs furnished, but those selected for the premiums are to remain the property of the Commissioners. The other designs, &c. will be returned on application to the Clerk.

GEORGE MILNE, Clerk to the Commissioners of Police.

Police-chambers, Edinburgh, January, 1855.

CONTRACTS.

TO BUILDERS

TREGOTHNAN HOUSE, four miles from Truro, in the county of Cornwall.—The Drawings and Specification of work intended to be done in the ERECTION of LAUNDRY, STABLE, and COACH-HOUSE BUILDINGS, of considerable magnitude, near the above-named mansion, will be left for the inspection of the Contractors in the care of Mr. POOLE, the Clerk of the Works, on and after MONDAY, the 22nd instant. The quantities will be stated in the specification. Sealed Tenders must be delivered, free of cost or remuneration, before TWELVE o'clock on the 30th instant, to the care of Mr. POOLE. The lowest Tender, or either of the Tenders, will not necessarily be accepted.—Tregothnan House, Jan. 4th, 1855.

CARLISLE LOCAL BOARD of HEALTH. SEWERAGE WORKS.—To CONTRACTORS, EXCAVATORS, EARTHENWARE-PIPE LAYERS, and OTHERS.—The Local Board hereby give Notice that they are prepared to receive TENDERS from parties willing to undertake the following CONTRACT:—

CONTRACT No. 6.—For EXCAVATIONS, LAYING and JOINTING EARTHENWARE SEWER and DRAIN PIPES; also for the CONSTRUCTION of MANHOLES and LAMPHOLES, FIXING GULLIES, and for OTHER WORKS

The specifications and drawings may be examined, and forms of Tender, schedule and bills of quantities may be obtained, together with any further information required, on application at the Office of the Resident Engineer, 13, Buttermarket, Carlisle; or at the Offices of ROBERT RAWLINSON, C.E. 34, Parliament-street, Westminster. Sealed Tenders to be delivered at the Office of the Local Board of Health Carlisle, before TWELVE o'clock on WEDNESDAY, the 31st day of JANUARY instant, endorsed "Tender for Contract No. 6."

Signed, ISAAC CARTMELL, Committee Clerk to the Board.

Carlisle, 17th January, 1855.

TO CONTRACTORS

WAVERTREE LOCAL BOARD of HEALTH. The Wavertree Local Board of Health are prepared to receive TENDERS for the CONSTRUCTION of SEWERS in Mill-lane and Olive-lane, at Olivemount, within the district of the Wavertree Local Board of Health, near Liverpool, according to plans and specifications prepared for that purpose, which may be inspected at the Office of Mr. ISAAC ATHERTON, Prince's-buildings, North John-street, in Liverpool, from this date until MONDAY, the 26th of JANUARY, where forms of Tender may be obtained on application. The Tenders must be sent in, with a schedule of prices attached, before FOUR o'clock p.m. of the 29th of JANUARY instant, addressed to "The Chairman of the Wavertree Local Board of Health, Public-offices, Wavertree, near Liverpool." The Board do not pledge themselves to accept the lowest or any Tender.

ISAAC ATHERTON, Law Clerk.

Prince's-buildings, North John-street, Liverpool, 9th January, 1855.

TO ENGINE MAKERS

THE TOWN-COUNCIL of the BOROUGH of LEEDS are desirous to receive TENDERS for the MANUFACTURE, ERECTION, and COMPLETION of TWO double-powered expansive STEAM PUMPING ENGINES, each of 100 horses power, together with Four Boilers, Two Double Acting Pumps, and other apparatus, to be fixed and applied at the new water-works at Potternewton, reconstructed near the Arthington Station of the North-Eastern Railway. Drawings and specifications may be seen at the Office of the Town-clerk, in Leeds; and at the Office of Mr. HAWKSLEY, Civil Engineer, 30, Great George-street, Westminster, and after the 31st instant at Leeds. Plans and Tenders must be delivered as in the said specification is mentioned, on or before TUESDAY, the 20th day of JANUARY inst. The Town-council do not pledge themselves to accept the lowest or other Tender.—By order,

JOHN ARTHUR IKIN, Town-clerk.

Leeds, January 11th, 1855.

TO ROAD CONTRACTORS.

THE DIRECTORS of the LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY are desirous of receiving TENDERS for GRAVELLING and FINISHING a certain portion of Road, called Parchmore-lane, on the "Beulah Spa Estate." Plans, specifications, and quantities may be inspected at the Office of the Society, 31, Highstreet, Borough, up to WEDNESDAY EVENING, the 24th inst. Tenders to be sealed by the secretary, on or before FIVE o'clock p.m. on THURSDAY, the 25th inst. endorsed "Tenders for Finishing a Portion of Parchmore lane, Beulah Spa Estate." The Directors do not bind themselves to accept the lowest or any Tender.

WM. BANKS, Secretary.

January 19, 1855.

CONTRACTS.

TO BUILDERS AND OTHERS.

SEALED TENDERS for the following SERVICES at Bull Point, viz.:—

1. Building Cottages for a Foreman, and Sixteen Labourers;
2. Building a Cookhouse and Wash house for the Crews of the two Powder Vessels, with Privy and Urinal;
3. Building an Office for the Ordnance Storekeeper;
4. Building a Civil Watch-house and a Shed for Waggons;
5. Building a Warder's Lodge and a Shoe-house;
6. Building an Engine-house;
7. Building a Boat-house;
8. Removing the present Wooden Filling and Examining-house at Kevham to Bull Point;

For SPECIFIC SUMS, will be received at the Ordnance Office, Pall-mall, London, on or before the 27th of JANUARY, 1855. Royal Engineer Offices, Devonport, 19th December, 1854

ORDNANCE CONTRACTS.—Notice is hereby given, that the Honourable the BOARD of ORDNANCE will receive TENDERS, on or before SATURDAY, the 10th of FEBRUARY next, for the Performance of such Work as may be required (by them) of the undermentioned trades, at York, Hull, Leeds, Bradford, and Pontefract, for three years, to commence from the 1st of April next:—

Bricklayers'	.. ..	Work.
Masons' and Paviors'	.. ..	do.
Carpenters'	.. ..	do.
Slaters'	.. ..	do.
Plasterers'	.. ..	do.
Plumbers'	.. ..	do.
Smiths'	.. ..	do.
Painters', Glaziers', and Paperhangers'		do.
Gas fitters' York only)	.. ..	do.

N.B. Parties are particularly required to observe, that it is more desirable to Tender for the whole of the trades at one place than for a part only; but the per centages must be separately stated for each trade.

Printed Schedules for the different trades, and forms of Tender, can be obtained on application at the Royal Engineer's office, 5, New-walk-terrace, York, the Barrack Office, Ottarie, Hull; the Barrack Office, Leeds Barracks; and of the Master Gunner, Scarboro' Castle, any day Sundays excepted, between ten and Four o'clock, until FRIDAY, the 9th FEBRUARY next.

Royal Engineer's Office, York, Jan 10, 1855.

CONTRACTS.—Notice is hereby given, that TENDERS will be received at the ORDNANCE OFFICE, PALL-MALL, London, on or before THURSDAY, the 8th day of FEBRUARY, 1855, for the Performance of such of the undermentioned branches of Artificers' Work, for the Ordnance Department, at the following Stations in the MEDWAY DISTRICT, for a period of three years, from the 1st of APRIL, 1855, determinable at the end of any one year, on either party giving to the other three months notice in writing, viz.:—

At Chatham and its environs; Gravesend, including Tilbury Fort, Shorne Mead, and Coal House Point Batteries.

Plumbers'	Work,
Painters', Glaziers', and Paperhangers'	do
Smiths'	Work, &c.

At Maidstone

Carpenters'	Work, &c.
Bricklayers'	Work
Plasterers'	do
Slaters'	do
Masons'	do.
Paviors'	do.
Plumbers'	do.
Painters', Glaziers', and Paperhangers'	do.
Smiths'	Work, &c.

Separate Tenders to be made for Chatham and its environs; Gravesend, with Tilbury Fort, Shorne Mead Battery, together with Coal House Point Battery; and at Maidstone; as well as for the different trades; nevertheless, Tenders may be submitted for all the trades together in one Contract in each Station; printed Forms and Schedules of Prices of the several trades may be had at the Royal Engineer's Office at Chatham, Gravesend, and Maidstone Barracks, until the 7th day of FEBRUARY next, Sundays excepted, and no Tender will be received after the hour of noon of the 8th day of FEBRUARY, 1855. The Board of Ordnance reserve to themselves the right of rejecting any or all Tenders that may be presented.

Royal Engineer's Office, Chatham, Jan. 18, 1855.

TO PIPE-FOUNDERS

THE TOWN-COUNCIL of the BOROUGH of LEEDS is desirous to receive TENDERS for about three miles of 24-inch CAST IRON SOCKET-PIPES, and other Castings. Drawings and specification may be seen at the Office of the Town Clerk, in Leeds, and at the office of Mr. HAWKSLEY, Civil Engineer, 30, Great George-street, Westminster, on and after the ELEVEN th day of JANUARY instant, and Tenders must be delivered in accordance with the specification, on TUESDAY, the THIRTIETH day of JANUARY instant. The Town Council do not pledge themselves to accept the lowest or other Tender.

By order,
JOHN ARTHUR IKIN, Town Clerk.

Leeds, January 11, 1855.

TO BUILDERS.

PERSONS willing to TENDER for the ERECTION of a HOUSE, in carcase, on the Mount Albion Estate, at Ramsgate, may see the drawings and specifications and conditions, at the Office of Mr. LEWIS CUBITT, Land Steward, square, London, on and after the 23rd inst. between the hours of TEN and THREE o'clock, and Later Copies of the five contract lots of the quantities. Tenders to be delivered by TWELVE o'clock on THURSDAY, the 1st FEBRUARY next. The lowest Tender may not necessarily be accepted.

[For remainder of Contracts see next page.

CONTRACTS.

PARISH of ST. PANCRAS (South-western District).—To PAVIORS, MASONS, SCAVENGERS, DUSTMEN CARMEN, &c.—SALE by WRITING, and SUPPLY of MATERIALS, &c.—The Commissioners for Paving, &c. this District, will receive TENDERS for the SALE of the FEBRUARY next, at their Board room, 3, Hobart-street, Regent-square, at SEVEN o'clock precisely, for TWO SEPARATE PROPOSALS for the above-named works. For further particulars and for all forms of Tender to be had, apply to Mr CUNNINGHAM, Surveyor at the Office as above, between NINE and TEN o'clock each day (except on the Commissioners not choosing themselves to accept, of the Lots of Tender. By order of the Commissioners, ROBT CUNNINGHAM

Jan 31st, 1855

TO BUILDERS AND OTHERS.

67, Hyde-park-street, Glasgow.
27, Palace-road, Manchester.

POWERFUL CRUSHING-MILLS, on Granite Edge-runners, FOR SALE; also three pairs of French and Glasgow millstones, a capital pair of 5-feet French stones, in frame, for hand power, to horse-in-shafts, or as a portable weighing machine; can be seen. Apply to C. T. CHRISTIE, Millwright and Engineer, 3, Broad-street, Lambeth, and 115, Vauxhall-walk.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for gas-fitting, in Brass and Iron. Fan, Compressed, Iron, and Brass Cocks, Furniture-pulley, Rings and Lacquered Case Tube for Picture Bells, Desk Bells, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Lone-ne, London.

STEAM-ENGINES of every description, fixed and portable.—Bray's Royal Agricultural Fire Engine may be seen at work, and list of prices may be obtained at WM. BRAY and CO'S Warehouses, Swan-lane, Upper Thames-street, near London-bridge.

FLAVEL' PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

THE ONLY PRIZE MEDAL OF THE GREAT EXHIBITION

WAS AWARDED TO

PIERCE, 5, JERMYN-STREET, REGENT-STREET,

For IMPROVEMENTS in the construction of FIRE-LUMP GRATES and his ECONOMICAL RADIATING GRATES, constructed upon the same principle of using Fire-Lumps as the medium of transmitting heat, which may be seen in large assortment of these new and elegant Grates, suitable for the Drawing-room, Library, Dining-room, Study, and Bed-room, in the simple and most splendid designs, at his Galleries, 5, Jermyn-street, adapted to the Louis Quatorze, Elizabethan, Renaissance, or other styles of architecture.

PIERCE'S UNIVERSAL FIRE-LUMP GRATE,

Which requires no fixing, being made in one piece, having strong octagon bars and bottom, with capacious and safe hobs, complete Prices, 11s. 6d.; 19s. 6d., 28s. 6d., and 37s.

PIERCE'S IMPROVED COTTAGER'S GRATE,

For Warming Two Rooms with only One Fire Price 21s. and 35s.

PIERCE'S PYRO-PNEUMATIC STOVE-GRATE,

For the enjoyment of Health, Warmth, Ventilation, and Comfort, being the only pure Warm-air Stove-grate yet invented that is constructed entirely of Fire-Lumps, without any heating surface of iron; it is well adapted for Warming and Ventilating Churches, Chapels, Schools, Public Rooms, Hotels, Invalids' Apartments, &c.

The Fire-Lump Bodies of these Grates are now made with the external casings in elegant designs of Bronze, Ormolu, China, Glass, &c.; and a most splendid Grate upon this principle may be seen at the Silk Warerooms of Marshall and Snelgrove, Vere-street and Oxford-street; also at the Manufacturer's, 5, Jermyn-street.

SOLE LONDON AGENT FOR THE NEWARK PRIZE COTTAGE RANGE, AND OTHER COOKING STOVES.

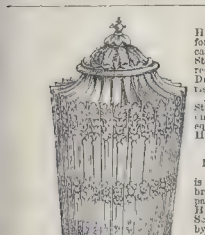
DAVISON'S IMPROVED STABLE PAVING BRICKS.

The attention of ARCHITECTS, BUILDERS, and Others, is particularly directed to this PAVEMENT, so especially adapted to

STABLES, CATTLE, OR CARRIAGE SHEDS, COURT-YARDS, &c.

The peculiar nature of the clay of which these Bricks are made, and the intensity of the heat to which they are exposed, render them the most remarkable for durability ever produced, being found to endure much longer than Stone Flags, Dutch Clinkers, or any other kind of pavement hitherto used for those purposes.

The particular merit of this Pavement over all others is, that it gives such a perfect security of footing to Horses and Cattle when passing over it.



These Bricks have been used by Mr. S. H. Eyre, Architect, Liverpool; at Mr. Rea's Great Central Horse and Carriage Repository, near the "Elephant and Castle," and by Mr. John Jay, at the Metropolitan Cattle-market, Copenhagen fields, where they may be seen laid down.

Prices, drawings, and particulars, sent post free, on application to the Manufacturers,

CHARLES DAVISON & CO.

FIRE-BRICK AND TILE MANUFACTURERS, QUEEN'S FERRY, NEAR FLINT, NORTH WALES.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing houses, &c. can with confidence recommend them upon which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application. COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

SYLVESTER'S HOT WATER STOVES for Warming Halls, Staircases, Galleries, Warehouses, Stores, Hotels, and Offices require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to

SYLVESTER and CO. Engineers, and Manufacturers of Heating Apparatus, 86, Great Russell-street, Bloomsbury.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post—DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BARHOFFNER and DEFRIES'S PATENT. The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accident from fire are effectually prevented by its use. While it presents all the comfort and appearance of an open coal fire, securing, at the same time, a great ventilation.—To be seen in action at DEFRIES'S Office, 69 Regent-street, London.

HEATING by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of Architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one 4-inch pipe is seen daily in full operation, heating building measuring 1,000 feet in length, at the small expense per day in fuel and labour of 9s. 8d. This achievement is being much surpassed by improved

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection, may now be seen in daily operation at F. EDWARDS and SON'S, 49, Poland-street, Oxford-street. By this grate a smoky chimney is prevented, no chimney sweeping is required, and a saving of at least thirty per cent. is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and hot air pedestal stoves. Old grates are altered to this principle.—Prospectus sent on application.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 1, ensures perfect combustion, consumes fuel, requires much less attention than the register stoves in general use, and produces, by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 373, Holborn.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, the Mowlem valve, stop-cocks, flange and socketed rows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

HOT AIR, GAS, VESTA, JOYCE'S STOVES.—STOVES for the economical and safe heating of halls, shops, warehouses, passages, lobbies, and the like, being at this season [illegible], WILLIAM S. BURTON invites attention to his unrivalled assortment, adapted (one or the other) to every conceivable requirement, at prices from 30s. each to 30 guineas. His variety of register and other stoves is the largest in existence.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to select from all the various manufacturers all that is new and elegant in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designs [illegible] for him. These are now ON SHOW in one of his TEN LARGE ROOMS and present, for novelty, variety, and purity of taste, an unparalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two light) to 16l.

WILLIAM S. BURTON has TEN LARGE SHOW ROOMS devoted to the show of GENERAL FURNISHING IRONMONGERY (including cutlery, nickel silver plated, and japanned wares, iron and brass bedsteads), so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent per post free. Theirs may be returned for any article not approved of.

39, OXFORD-STREET (corner of Newman-street); 1, 2, and 3, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

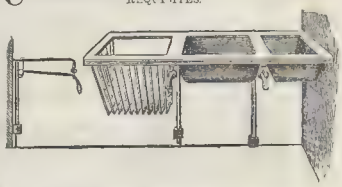
MAGNUS'S PATENT ENAMELLED SLATE CABINET FORMED FIRE-PLACE.—This is fixed in the most novel, elegant, economic and comfortable fire-place that has ever been introduced to the public. It moves on castors, and stands BEFORE the opening of the chimney, projecting into the room as a regular cabinet. It is composed of fire-stone and slate, and has hot-air chambers. It may also be fitted up for use in a flat of coal. By the economical, who dislike to see half the heat from the coal wasted in the chimney, and by persons of taste, who object to the stiff unmeaning chimney piece in ordinary use, the CABINET-FORMED FIRE-PLACE has only to be seen to ensure its adoption. Price from ten guineas upwards. Pimlico Slate Works, 64 and 65, Upper Belgrave-place, Pimlico.

NAILS and IRONMONGERY, from BIRMINGHAM direct

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES,

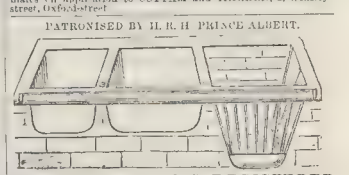
a complete LIST of which will be forwarded upon application



FREDERICK BEATH,

Nail Manufacturer and General Factor,

Regent Canal, BIRMINGHAM;



or at 16, Great Saint Thomas-street, LONDON.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER TROUGH as ONE FIXTURE, they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent enables the purchaser, at small, if not no, additional expense, to have long, loose, or short mangers, as may best suit his stable, all to be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse, whilst feeding, and being rendered suspicious to infection, are some of the advantages of Cottam's Improved Principle. Made to any pattern, plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock. Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

PATRONISED BY H.R.H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.

Castings Warehouse, 81, Upper Thames-street.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, & Bell-mouthed Pipes for Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights, and other castings, ironwork for Bakers' Ovens of every description, fitted complete to be built in sets or parts. Price equal to any first-class house. Contracts taken to any extent. Goods landed. A powerful crane.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Books, Papers, and Bankers' Pass-books in one of CHUBB'S SAFES, after Seven hours' exposure to the Fire.—COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"21, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"Gentlemen,—We have great pleasure in communicating to you, that the large "Patent Fire-proof Safe" that we purchased from you 12 years ago, for our late address, New Bailey-street, has been the means of preserving for us the most valuable of the books and papers therein, on the evening of the 1st of March, when our premises were destroyed by fire. The safe, after being upwards of seven hours in the greatest heat, was unlocked in the presence of several of the principal officers of the Fire Brigade, and to their great surprise and the delight of the tenants present (none excepted) was found that only some of the backs were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Doors and Shutters; Iron Doors and Frames for Strong Rooms; Street-door Latches; Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and 4, Horsefields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction is the most extensively adopted, and the approval is [illegible] for nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased cubic area, and many other important advantages.

The floors and roofs are formed by a combination of [illegible] of wrought or rolled iron with concrete, so constructed that the floor becomes in effect a beam of artificial stone, with the iron, the strongest part, occupying the centre. The roof forms a fire-proof foundation adapted to receive a finished [illegible] either of the ordinary flooring boards, or of cement, [illegible] tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are concerned in building, both as superseding the necessity for cast-iron girders and brick arches, and as being the great desideratum of fire-proof construction, even for ordinary dwelling-houses, domestic buildings, with in the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, Yorke-buildings, Adelphi.

WILLIAM BAKER, BRAD-AWL MANUFACTURER, Manufacturer of all kinds of Sadlers' Awls, Collar Needles, Pointing Needles, Dutch Steers' Needles, and Sail Making Needles, No. 14, Albion-street, Rotherhithe, London. Established twenty-five years. Honourable Mention, Great Exhibition, 1851. Prize Medal, New York Exhibition, 1853.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses.

Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

STEVENS AND SON,

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER,

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved Ventilators.—HULETT and CO. 55, High Holborn.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE, can be obtained of all ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.
Established 1774.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

eing universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 5 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 8 inches and upwards.

For farther information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

Lists of Prices and Estimates forwarded on application.

THE IMPROVED CHIMNEY-COWL

MANUFACTURED OF MOREWOOD AND ROGERS'S PATENT GALVANIZED TINNED IRON, JAPANNED STONE COLOUR.

Combines a perfect and ready action, with facility of sweeping and freedom from noise; and the working parts being wholly contained in the Dome Top, impervious to Smoke or Weather, it is not liable to become out of repair, and effectually prevents the annoyance experienced in gusty weather, or where the Chimney is subject to the Eddies produced by a higher building. A Lithographed Drawing and Description can be had of

A. WHYTOCK, Manufacturer, 494, NEW OXFORD-STREET,

Where Prices and Particulars may also be obtained on application.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT,

has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage. 3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 45 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

The Builder.

SATURDAY, JANUARY 20, 1855.

A WINTER day at Sydenham, under the great glass roof, when the sun is shining, may be made as pleasant as a balmy one in June—with a difference. There is less lounging along the terraces, sauntering about the grounds, and no stretching on the grass. Walking outside is done with rapidity, such as is employed when taking a "constitutional;" and the antediluvians repose almost as peacefully as the fossil forms from which they have been built did in their far-down strata. This is fortunate, since they are not in a state to receive company: they are going through a course of paint, and are mighty grim. One, indeed, looks so ugly that we were not surprised to hear an old lady point it out as the *nasty*-don. The enthusiastic dreamer of the splendour of the coming fountains may venture into the "Slough of Despond," which ordinarily surrounds the lower part of what will yet be the goodliest terrace in England; but generally the bulk of visitors now find the building or its immediate vicinity the attraction. And unquestionably it presents the most delightful and instructive promenade, in which "Paterfamilias" can turn out his juveniles for a holiday, or wander himself to pick up stray bits of information. You may either pass behind the monster bed-tick, which cuts off the palm-tree end of the building, to admit of a higher temperature, and there listen to the solemn melody of Körner, the playful Charivari of Zullner, and the last new polka; or pass into a court which condenses into one little cell a summary of all that the cunning brain and the very skilful fingers of man has in the course of time achieved in some department of heaven-aspiring art; or, sauntering about all sorts of odd corners, with pleasant companions to induce and reciprocate remark, you may survey the cold lineaments of the "foremost men of all their time," and speculate on the connection between their heads and their deeds. Such was our occupation one day lately, when we picked out the "architects," and now purpose throwing together some memoranda about them, from the late Mr. Phillips's account of the Portrait Gallery and some other sources; for we are afraid that from the great mass of matter in the shape of catalogues, much of their interesting and valuable information is lying buried, readers being somewhat deterred by the extent. Mr. Phillips has truly remarked that "Man looks at his own image with a more feeling curiosity than he regards the architectural remains of a city, however ancient, or of any structure, however beautiful. The broad brow of the poet, whose works we have read; or the martial air of the soldier whose deeds we have heard of, excite an instant desire for more intimate acquaintance with the men." "A portrait gallery exhibits the men who have worked their way to eminence. Biography teaches how they have travelled the difficult and thorny road." In a word, as Dionysius, of Halicarnassus, expressed it, biography is philosophy teaching by examples.

Discarding the elements of race and country, and beginning simply at the earliest in the stream of time, we see Niccola Pisano, who was born somewhere about 1205, and died about 1290.* Niccola had no master: he was the reviver of sculpture in Italy, and built a spiral staircase in the campanile of St. Nicholas of the Augustines. He was the father of John of Pisa, the architect of the Campo Santo, in that city. John died in 1320: he executed a portrait of his father in the church of Santa Maria della Spina, where he was directing the works; and it may be from this that the bust of which we have a cast was made. Niccola may be called a Mediæval, and he is the only one here. The old Gothic architects left us no busts of themselves, scarcely their names. Next him stands Laboureur's bust of Andrea di Cione, better known by his surname, Orcagna. We do not know the precise date of his birth: somewhere about 1370 he died. In each of his three capacities as painter, sculptor, and architect, this good and great man executed several works. Some of them still exist in a shattered state, in the Campo Santo, at Pisa; in the Strozzi Chapel, and the Or-San-Michele, at Florence. The grandeur and grouping of the figures in his paintings were, at a later period, striven for, even by Michelangelo and Raffaelle. There is a mezzo-relievo portrait of Orcagna by his own hand, behind the altar of the Florentine church already named. He is there represented as an Apostle, shaven, and wearing a hood. Of the next Italian sculptor and architect, Filippo Brunelleschi, we know more. He was born at Florence in 1375, and died in 1444, according to Quatremere de Quincy, who gives an interesting account of him. The "Hand-book" gives 1377 and 1446 as the dates of his birth and death. He was the son of a notary, who at first placed him with a goldsmith, whence he was led to apply himself to sculpture. He was the friend of Donatello, the great sculptor of that age (you may see casts of many of his works at Sydenham), and together they went to Rome, where he was overcome with astonishment at the sight of the architectural remains. Awakened from this first impression, says De Quincy, "Brunelleschi knew no repose. He forgot the hours of repast and sleep. He felt no other necessity than that of making plans, measuring the ancient edifices, investigating the true character of the three orders, and discovering that system of reason, intelligence, and harmony which would re-establish and perpetuate the authority of its principles." His resources failed, but by taking to his former business he was able to procure the means of prolonging his studies in Rome. He is best known as the constructor of the Cupola of Santa Maria del Fiore, at Florence, and built churches, palaces, and fortifications. Michelangelo declared that it was difficult to imitate, and impossible to excel him. He was an amiable man: notice his large, persevering, and kindly-looking head.

Bramante's reflective and charming head is not far off. He was born in 1444, at Castel Durante, according to the "Handbook," but this is not certain; and he died at Rome, in 1514. He condemned himself to privations to study architecture. He built, amongst other things, the circular temple of St. Pietro, in Montorio, the vast palace of the Chancery, one of the most remarkable buildings in Rome, and was selected to rebuild St. Peter's. To him belongs the project of the dome, though Michelangelo carried it out. "No one can deny," writes the great man last named, "that Bramante was as proficient in architecture as any one since the ancients up to our own time." He is accused of having endeavoured to injure Michelangelo, and not without truth. Poor human nature!

Stand uncovered before the next, for it represents Michelangelo Buonarotti himself. This bust is from the marble by Alessandro d'Este, and one of those contributed to the Capitoline Museum, at the expense of Canova, when he was president of the Academy of St. Luke, at Rome. It conveys an idea of coarseness which would hardly seem to belong to Michelangelo's natural expression, marked as it is with power and energy. It will be remembered how his nose was broken by a blow from his fellow student, Torrigiano. He was buried in Sta. Croce, at Florence, his monument there being designed and executed under the superintendence of Vasari, the historian of the painters. There is, in the Capitoline Museum, a bust of Michelangelo, said to be by his own hand. He was born in 1474, and died on the 17th of February, 1564,—the "Handbook" says 1563. His father and uncle opposed his desire to prosecute the arts, but he strove on, feeling his power. "All learning," says Phillips truly, "and all knowledge came to Michelangelo, perhaps, even more than to Leonardo da Vinci, his mighty contemporary, as a rightful inheritance, to be magnificently accepted, and sumptuously enjoyed. Poet, musician, sculptor, architect, engineer, painter, anatomist, man of science—his titles to honour are inexhaustible. His genius was universal—his grasp boundless. All his works, of whatever kind, bear the broad, deep stamp of his haughty, masculine spirit, and constitute the immortal expression of strength, energy, and sublimest passion. The feeling of Michelangelo was strong, intense, grand, penetrating; his thought as clear as it was profound. His life is a series of conflicts in the world of intellect. Domenico Ghirlandaio has the honour of claiming Buonarotti as his pupil. By Ghirlandaio the stripling was introduced to Lorenzo de' Medici, who, as well as his successor, became the steady friend of the great artist." In 1503, he was commissioned to paint one end of the Great Hall of Council, Leonardo da Vinci being entrusted with the other. Never before had two such spirits met to contend for glory. His statue of Moses, and the ceiling of the Sistine Chapel, were produced under Pope Julius II. "Under Leo X. and Adrian, works of equal power issued from his brain. In 1546, he was commanded by the Pope to undertake the direction of the works at St. Peter's. He consented only upon the condition that he should receive no salary, and laboured "for the love of God alone." In seventeen years he prosecuted the pious service, and raised the sacred edifice as far as the base of the cupola. The undying memorials of his chisel and pencil speak the intellectural supremacy of the man beyond all words of praise. They will command wonder, delight, admiration, respect, fame, whilst the world lasts. There is nothing factitious, no studied allurement, no imposture in his work. It is all true, simple, sublime." His head shows great power, and a contemptuous expression which we should be glad to miss, but are forced to pardon. It was thus he looked, doubtless, when he said to the servants of Pope Julius II. who had refused him admittance on a particular occasion, after other marks of coolness,—"When his Holiness sends to seek me, you tell him that I am not here;" and then he departed for Florence, and left word with his servants to sell all his goods, and follow him. It was some time before the Pope could coax him back, but he did so ultimately. With all his irascibility, he was a stanch friend and an upright man. We may all remember with advantage his favourite maxim:—"*Chi va dietro ad altri mai non gli passa inanzi.*"

We must be briefer in our notes, or we shall not get through the list. Raffaelle was a gentleman, as well as a genius: you may see it in his face, though it has, to our eyes, a spice of coarseness. He was born at Urbino, in Italy, in 1483, and died at thirty-seven years of age! What he did in that brief life was marvellous. He was an architect and sculptor, as well as the prince of painters. He directed the works at St. Peter's in 1515, and built two palaces in Florence. De Quincy points justly to the architectural portion of Raffaelle's wonderful picture, —the School of Athens—as a noble invention. Envy attributed it to Bramante, but evidence is wanting and inference against it. Of his character it is almost enough to say, that all men

* These busts will be found behind the statue of Rubens in the Great Transept, on the east side of the nave.

loved him. He built the court of the Vatican, and it was there he painted those fifty-two subjects from the Old and New Testament, which have been called Raffaelle's Bible. The next bust represents Sanmicheli, who was first employed at the cathedral of Orvietto, and built the gateways of Verona, and some palaces. He was much employed in fortifying Italian cities. He died in 1559, when he was seventy-five years of age. Giulio Romano was an architect too; he assisted Raffaelle at the Vatican, and built palaces in Mantua; but we must pass him by, and go to Andrea Palladio, who was born at Vicenza, in Italy, in 1518, and died there in 1580. He largely studied the ancient monuments of architecture, and adapted it to modern purposes with great success. He created, indeed, a style of architecture, which bears his name, and has been over-praised and over-abused. Inigo Jones may be called his disciple. Vitruvius was his master. The circumstances of the time confined him chiefly to the execution of noble residences, of which he has left a number of elegant specimens in Vicenza and Venice, as well as some churches, and the well-known theatre. His treatise on architecture has been translated into all languages.

Inigo Jones* was born in 1573, and died on the 21st of June, 1652. The "Handbook" says erroneously 1572 and 1651. It is stated, but without much certainty, that he served his apprenticeship to a joiner, but his talent for landscape-drawing obtained for him the favour of the Earl of Pembroke, in whose company he visited France, Flanders, Germany, and Italy. At Venice he was inspired with a taste for architecture, and, following the art with ardour, obtained the office of first architect to the King of Denmark. He was in England, however, as early as 1604-5, where he assisted at various masques. The attachment of Inigo Jones, who was a Roman Catholic, to the cause of Charles I. caused him great loss and suffering during the civil wars; and he died, not long after the execution of the king, in great trouble. He made a second visit to Italy,—for his copy of Palladio, preserved at Worcester College, Oxford, contains an entry dated "Vicenza, Mundaie, the 23rd September, 1613." The Banqueting House at Whitehall, his most famous work, was finished in March 1622, at an expense of 14,940*l.* 4*s.* 1*d.* Of his quarrels with Ben Jonson, who ridiculed him as Vitruvius Hoop, and sneers at what he calls

"Thy twice conceived, thrice paid for imagery,"

we have before now spoken. Lincoln's-inn-fields and Covent-garden piazza had the assistance of Inigo Jones.

Naturally, the mind turns from the great man whom we have just noticed to the later and yet greater name of Christopher Wren, who was just twenty when Jones died. As a mathematician, Wren was in his day second only to Newton, and in general scientific knowledge he had no superior. At thirteen he had invented a new astronomical instrument. At fourteen he entered Wadham College, Oxford, and, young as he was, formed one of the original members of a club established for philosophical discoveries and experiments,—the club, indeed, out of which grew the Royal Society. When twenty-five he was Professor of Astronomy at Gresham College, London, then a very different institution from what it is now. At the Restoration he became Savilian Professor of Geometry at Oxford. His skill as an architect having been meanwhile shown in the Sheldonian theatre there. The popular fame of Wren rests on St. Paul's Cathedral, which he began to rebuild nine years after the Great Fire, taking thirty-five years to complete his magnificent labour. St. Paul's is one of the few great ecclesiastical edifices which was completed by those who commenced it. One architect and one master-mason finished the great task. Before and during its progress, Wren was engaged on other edifices, and applied his vigorous mind to the most abstruse branches of science. His mechanical discoveries are numerous. He invented an instrument for ascertaining the amount of rain falling in each year; he proposed means which rendered the taking of astronomical observations more easy and exact; he was the originator of the attempt to introduce fluids into the veins of animals; and there is every reason to believe that to him, and not to Prince Rupert, we owe the art of mezzotint engraving. Wren's energy in the pursuit of science appears to have been immense. Notwithstanding the enormous labour which devolved on him in the rebuilding of the burnt City, there is scarcely a meeting of the Royal Society recorded wherein he is not seen to take a prominent part in the supply of papers and contribution of information. Between 1666 and 1711 he designed and built fifty-three parish churches in London, and numerous other buildings. His genius, his industry, his integrity, and his noble spirit, could not protect him from the attacks of the envious, who contrived to embitter his latter years. As Pope wrote:—

"See under Ripley rise a new Whitehall,
While Jones' and Boyle's united labours fall;
While Wren with sorrow to the grave descends,
Gay dies unpensioned with a hundred friends"

"Clever but disagreeable," said one, looking up at a bust, in a tone which seemed to say, the speaker had a right to an opinion. Let us see whose head it is. Schinkel, of Berlin. Well, it certainly does convey that impression, but as there are yet several other architects in the collection, and we have given as much space to the subject as we can afford to-day, we will leave Karl Frederick Schinkel, to commence with him in our next ramble amongst the busts at Sydenham.

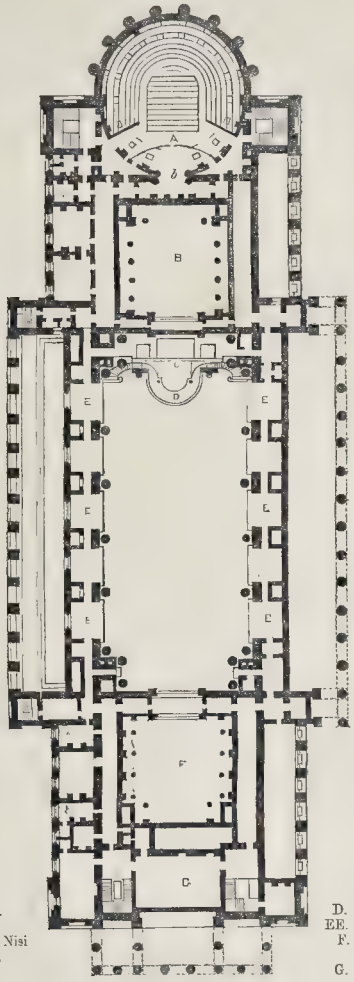
* Bust will be found behind the Farnese Hercules, at north-west angle of great transept and nave.

A CRITICAL REVIEW OF ST. GEORGE'S HALL AND THE ASSIZE COURTS, LIVERPOOL.*

BUILDINGS peripteral, or nearly so, unless the exterior surface presented by entablature and columns bears a greater proportion to the whole surface of the façades than the Corinthian order allows, a proportion found only in the Doric or Ionic, are apt to show too much action, too great an alternation of minute and uniform masses of light and shade; suggesting, I think, in reference to the edifice in question, that the adoption of a Corinthian ordonnance should have dictated the securing of a greater extent of mural space at the extremities of the eastern or principal façade; a remark, by the way, which applies equally to the front of the Fitzwilliam Museum at Cambridge, as well as to some other meritorious structures. Increased extent of plain wall at the extremities of the east façade of St. George's Hall, it would have been natural to repeat round the corners, and much to the advantage of the south portico and north pseudo portico, both of which would be benefited by wider backgrounds, from which to spring, and to balance their own masses in the nature of wings receiving a broader and quieter light. Breadth and repose would, I think, have been further promoted by having anta-caps, consisting of a series of plain mouldings and delicately carved necking, instead of the fully enriched Corinthian capitals, to the square pillars; as in a plain building, almost entirely surrounded by columns or pilasters, like St. George's Hall, such capitals to every column and pilaster forms to an eye at some small distance a dark dotted line, that intersects the composition, and is so far unfavourable to its unity. The means suggested would also have given greater effect, by contrast, to the centre colonnade, and greater variety of tone to the whole.

The building, under such treatment, I grant, would have been less rich upon the whole. But there are other parts that could have received the difference in sculptural expenditure, and, as I believe, with greater advantage as regards entire effect; the frieze, for instance, particularly that of the eastern portico, decoration of which by frieze embellishment, as well as by statues above, would be requisite to give it its due predominance in beauty and power over the south one.

But what may be deemed a positive fault betrays itself at the back in the several tiers of windows with which it is perforated. I do not include the hall windows, for they are but temporary, but those of the smaller apartments. Windows *may* be so treated as to be as innocent of any injury to the façade they pierce, however fully architectural or classically pure it may be, as a door or niche; and our noble sheets of polished plate glass render the task less difficult than formerly; but at the back of St. George's Hall no attempt of the kind is made, the window openings being filled in with vertically sliding sashes, the upper ones over-hanging the lower, as usual in dwelling-house windows, and divided in the ordinary manner. Such features in an edifice whose purpose is so far removed above the ordinary utilities of life, association alone would go far to render disagreeable, much as it would the occurrence of so many low metaphors in an epic poem. Although but a superficial blemish that could of course be easily removed, they are, nevertheless, really incongruous, and show positively as a blunder in the building,—a wrong word in its speech, a false note in the music, and, being somewhat numerous, give a dash of the vulgar and commonplace to what would otherwise be a poetic and unique façade.



St. George's Hall bears promise here and there, by projecting blocks of masonry, of some future addition of decoration in the shape of sculpture in relief. This and more it much needs, for it is comparatively naked, and reminds us of the melancholy contrast, as to degree of embellishment, formed by works of the day with those of the celebrated periods of art both in ancient and modern times,—a contrast that is increasing rather than diminishing. Compare St. George's Hall with the Doric temples of Greece, of which high-class sculpture was an integral part,—with the cathedrals of mediæval Europe,—with the Renaissance and revived Roman churches of Italy,—with St. Peter's, at Rome, for example, or Milan Cathedral, which swarms with an ever-present and immortal congregation, in the shape of figure-sculpture; besides being without frieze decoration, either natural or geometrical, it has not in its principal façade, or elsewhere, except at one end, embraced that form of humanity, for the illustration of which the style is so well fitted; without which it strikes not the "full-voiced harmony of beauty," and lacks the high and entire being belonging to its nature.

Let it not be supposed that there is anything in the style of St. George's Hall, in its severity of line or chasteness of form, that renders it an exception to the rule alluded to,—that restricts it to abstract form of column and cornice alone, and forbids its being fully wedded to figure-sculpture or other natural ornamentation. Purity and nudity are not convertible terms, and, though our edifice proves that architecture in the possession of proportion and form alone is a great art,—it is capable of manifesting what, though well known to Egyptian and Greek, is not sufficiently recognised in the present day, that figure-decoration is an ingredient absolutely necessary to the full development of a conception in the grand style of architecture. I believe it may be employed either where the beauty and expression of the features can be seen and felt, or at such distance, as in a finial, for example, that only the majesty of the figure is appreciable; when, while distance will lend it a new enchantment, it will give a picturesque skyline to the exterior, without touching that character of grandeur, or impairing the nobleness and unity of composition, in which the classic architecture is unrivalled.

Indeed, one of the chief things we have to aim at in the development of the classic style is the reconsummation of that union of architecture with sculpture which existed among the Greeks,

ST. GEORGE'S HALL, LIVERPOOL: PLAN OF UPPER FLOOR.

A. Concert-room.
b. Orchestra.
B. Upper part of Nisi Prius Court.
C. Organ.
D. Organ gallery and stairs.
EE. Galleries in hall.
F. Upper part of Crown Court.
G. Grand Jury.

who so treated them, that one spirit informed, one life-blood flowed through both, and architecture and sculpture were one undivisible thing, the sculptural figure being but a higher material development of the architectural essence. And as among them, so among us, such union would produce a more exquisite and perfect creation than either art, unaided by the other, could call forth.

The point most loudly calling for sculptural embellishment in St. George's Hall is over and behind the great central colonnade, where it would find an excellent background in the nude attic of the building, and give it relief in return;* and, if conceived and executed in the broad and simple manner, with the grandeur of form and greatness of style that the architecture would dictate, it would diffuse a brighter glow, and kindle into a sublimer life, the entire body of the edifice.

To this should be added statues, as evidently intended by the architect, over the centre of each of the dwarf intercolumnar walls; and, if the east portico be, as I consider it is, the principal, then the west pseudo-portico has as much right to embellishment as the south one; indeed, it demands it, for due balance of the building, which should be equal, on each side of the centre.

The merit of St. George's Hall lies chiefly in the exterior, which is equalled by but little of the interior. Let us enter the building through the eastern portico, which, having twice the breadth and number of columns of the south one, and a commensurate array of steps, and being the most direct, and, indeed, the only convenient entrance to either the great hall or the Assize Courts, can be regarded in no other light than as the principal entrance to the edifice. The first thing that must strike the visitor is, that, for want of a vestibule, the great hall—which, by the way, should have been entered through the end instead of the side—is too ready of access—approached without the preparation and prelude its importance demands: and I think it must be regarded as a defect in the plan, that, instead of the hall having a vestibule, it should be itself but a vestibule to inferior apartments. The relationship between it and the latter is different to that between the aisle and nave of a cathedral, the nave being the approach to an apartment which, if inferior in size, is for a more sacred purpose, and generally of a more elaborate decoration.

Moreover, the south portico not only is not the entrance to the music-hall, which as a grand room requires a grand and simple mode of access,—it is not the entrance to the Crown Court, to which it is almost contiguous; for, instead of conducting you into a vestibule from which you can proceed straight onwards, and enter the court with the judges' bench before you, it lands you at the back of the said court, from whence you must thread a labyrinth of passages ere you can enter either the court or the great music-hall.

The north hall or vestibule, which is not only beautiful in itself, but in full keeping with the exterior, has the misfortune of being entered from without, in a manner that is quite unworthy of it,—through apertures in the basement, while it has the same defect as the other, in conducting you to the back instead of the front of the court.

The fact is, convenience and propriety of plan, as regards entrance to the courts, have been sacrificed to the very questionable advantage of having the three apartments seen together, and to form one architectural vista. I call it a questionable advantage, as there could be little occasion for any one standing in the Civil Court and looking through the hall to see a Criminal Court in the distance. Had the architect abandoned the idea, and made the great hall quite distinct from the courts—*i.e.* without any direct communication into them—there can be little doubt that each court would have been directly entered from its respective hall; in other words, that the position in reference to the building of each law-court with its judges' bench, retiring-room, &c. would have been the reverse of what it now is.

Again, in the planning of the building the purpose of the hall itself was not kept in view—a fundamental error, whether chargeable upon the architect or his employers I know not. St. George's Hall was intended, I believe, for musical festivals; at least, whatever other purposes it was designed for, as that of a great audience chamber, a banqueting-hall, or assembly-room, that is the purpose which, demanding the most critical care, should have governed its form, and which, if it answered, it is very probable it would not be far unfit for any other. But so little was this arranged for, that when the organ was to be erected, no one knew where to put it, there being no place where it would answer its purpose without interfering with an obvious intention of the architect. As might be expected, it now looks not exactly at its ease, and the room, as a room, would be better without it; for where it stands it mars its symmetry, and appears as an afterthought.

The sacrifice, however, has been made on the right side. Architecture has very properly given way to music and the truthful expression of a musical purpose, which requires that the organ should be placed where it can be seen as well as heard. The organ, being an essential feature, is to the hall what a bed is to a dormitory, or a bookcase to a library, and the eye as well as the ear seeks it.

Entering the hall, the visitor must feel that he has not only approached it too suddenly, but that he has experienced too great a change in scene. To form the interior of a building, many graces should be added to the style of the exterior, but it should be in the same spirit, which, in the present instance, is far from being the case; for stepping from the portico into the great hall is going at once from the frigid to the torrid zone of art, from the Parthenon to the Alhambra. In the first place, if the visitor has duly contemplated the almost peripteral exterior, and enjoyed the simplicity and grandeur arising from the combined array of columns and pilasters, he cannot but feel that a greater amount of columnar richness was due to its principal apartment, which being divided into centre and aisles, gives opportunity for its display as much as does any part of the exterior.

* The pedestals terminating the parapet wall at each end above this portico, are eminently fitted, and I doubt not were intended, for the reception of groups of sculpture. But besides these, a line of statues, connecting them, and corresponding to the number of columns beneath, is necessary to give relief to the attic behind, which without them is disagreeably bare.

The columns within the hall are too few to be much noticed, and too far asunder to have the effect of a colonnade. They appear besides scarcely sufficient for their office of bearing the ceiling, the supporters of which, even on the present arrangement of cross arches, might, I think, have been in couples instead of single columns, with great advantage to the character of the place. I grant that, with a pycnostyle screen, the gallery would be useless as a place for seats, but if it is not at present useless, it is of little value as a gallery. Though obstruction of the view is of less consequence in a place where the entertainment is for the ear rather than the eye, yet the desire to see as well as to hear is generally so great, that a gallery to contain seats should not have been placed behind columns at all. A ceiling could of course be supported, as it often is, by iron columns, of about the proportions of a walking-stick, and as far asunder as even a shopkeeper could wish. Such supports would be no material obstruction of the view from a gallery placed behind them; but this would be a sacrifice of architectural beauty to mere space and material,—the greater to the less; whereas architecture, as a fine art, whose range of action is between the graceful and the grand, the sublime and the beautiful, must have sacrifice made to it, not of fitness and convenience indeed, for want of these would be a defect, but of space and wrought material. Everything that is great and beautiful receives sacrifice. Without sacrifice we cannot have greatness; but we must in architecture as in everything else, take care to sacrifice the lesser to the greater, and lose no essential excellence. In the case under notice, the space occupied by the galleries would not have been altogether a sacrifice if cut off by a colonnade; for it could have been rendered useful as an upper lobby or aisle for occasional retirement from the heat and glare of the hall, when the thickest screen would be practically an advantage instead of an obstruction.

The fact that it would prevent any great quantity of light being brought from the west side, is of little consequence in St. George's Hall, where the architect was independent of the walls altogether for light, which could have been introduced in any quantity from the roof, and with the advantage over the adopted mode of lighting, not only of a simpler disposition and more concentrated flow, by having one great central light, but of leaving the west wall unbroken like the east, and rendering the symmetry of the room complete.

And while a greater array of columns would have rendered the interior more poetic and in better keeping with the outside, it would have increased the apparent size of the hall, which at present looks much smaller than it is—a result, however, arising not from the disposition or fewness of columns alone, but from the general treatment of the apartment, dictated, in a great measure, by the plan, the general conception of which, while it proves that the fancy of Elmes, like that of Wren, was too full of the "Templum Pacis," has left to the present architect, in its execution and carrying out, too little scope for grandeur, a quality which it is incumbent on an architect when the very expensive ingredient of magnitude is allowed him by no means to lose. I remember how, on entering the hall four or five years ago, before the ceiling or walls were plastered, or the columns erected, I was struck with the vastness and gloomy grandeur of the place, with its overspreading vault, itself a great triumph of constructive skill. I felt as if I were in an excavated mountain, or in some fabric reared by Cyclopean hands, and bequeathed to the service of the present. Other charms are there now—beauty has spread her enchantments—enchantments of no ordinary kind; but the majesty and grandeur springing from the original and unadorned form is lost, and architectural greatness has taken its flight.

Than the brass doors, on which symbolic animals, reeds, rushes, &c. most gracefully mingle, there could scarcely be anything more beautiful, either in design or execution; the shields and other devices, and artistic embellishments of the ceiling, are as gorgeously rich and elegant as could well be imagined, evincing great artistic resource on the part of the present architect; the galleries are tastefully and artistically supported; and the varied elements entering into the composition of the hall are combined into a harmonious and graceful whole, that is relieved by many really felicitous strokes of art, such as the Atlantes, for instance, which are fitly and beautifully applied to the support of the organ. But the whole is misplaced, for it is not in the spirit of the edifice of which it is the lining; I mean, of the exterior, of the grandeur of which too few and faint are the rays that have penetrated to the interior.

The rectilinear division and subdivision of the ceiling into distinct and similar compartments, are productive of much elegance; but they are fatal to the grandeur arising from its simple geometrical form. I do not object to the minuteness of the divisions into which the vault is broken: compartments of a ceiling may be as small as you like, but they must be wrought by grouping into *great* compartments, if they are to have any effect of grandeur. And even these must be arranged so as to avoid dividing it by straight lines either longitudinally or transversely. And while each is composed of a multitude of varied but related forms, they are all to have relation to each other; while the element of variety is still kept in veiw. Complete separation of the ceiling into parts is the great thing to be avoided; and I think some delicate decoration like diaper, covering the whole surface, analogous to texture in nature, would be preferable to many species of decoration in general use; as it could have no effect in disturbing the eye from the contemplation of the majesty and grandeur of general form. It could, of course, for preservation from monotony, be more or less relieved by detached ornaments, arranged on the principle above hinted at.

In conclusion, let me say that it is from no fault-seeking temper that I have dwelt thus long on the defects, or what I deem such, of this remarkable structure. While all its beauties may be justly placed to the credit of the architects, its blemishes are, for the most part, the result of untoward circumstances. The want of a vestibule, for instance, to the great hall, and other omissions of a plan in many respects ingenious, are attributable to the preclusion, by limitations and other difficulties of site, of that general outline of building which was alone capable of containing the right accommodation,* together with the discordant mixture of purposes to which the whole was dedicated. It is nevertheless important to the interest of architecture that the merits and demerits of an architectural achievement on which so many eyes are now fixed, should be clearly and impartially pointed out, in order to their being well and generally understood. So prone are we to imitate even the faults of what we admire, that knowingly to hide or suppress them in a review of the work, would be not only to degrade criticism, but to wound and betray the high cause of art.

SAMUEL HUGGINS.

We append a plan of the upper floor of St. George's Hall, showing the Concert-room; and shall give some other illustrations shortly.

OBSERVATIONS ON THE PLANS FOR THE MAIN DRAINAGE OF THE METROPOLIS.

Two schemes for the main drainage of the metropolis are now before the Metropolitan Commissioners of Sewers.

One by Mr. John Roe, surveyor to the separate Holborn and Finsbury Commission, and late general surveyor to the Metropolitan Commissioners for the northern section of the metropolis.†

One by Mr. Bazalgette, Messrs. Bazalgette and Haywood, engineers to the Metropolitan and City Commissioners respectively, and by Messrs. Stephenson and Cubitt, consulting engineers to the Metropolitan Commissioners.‡

There is also another scheme, proposed by the late Mr. Frank Forster, chief engineer to the Metropolitan Commissioners of Sewers, in conjunction with Mr. Robert Stephenson, but which appears to have been kept in the background,—a studious reserve certainly not compatible with the great cost of its preparation, or consistent with the fact of its advanced state, contract drawings having been prepared for large portions, and three large parts having been let to contractors upon public tender;—or with the preliminary fact of its warm approval by Mr. Stephenson, its part designer, by the Metropolitan Commissioners and by the C. S. Commissioners and their engineer, Mr. Haywood.*

Mr. Roe proposes two gravitating lines, the Hackney-brook, for the drainage of 7·12 square miles, and the middle level for the interception of the sewage from 27·8 square miles, and a low level line, taking 6·54 square miles, with a joint outlet at Barking-creek.

Messrs. Bazalgette and Stephenson, &c. have two gravitating lines, the Hackney-brock with an extension in a branch from Holloway to Kilburn, for the *complete* ordinary and flood drainage of 14 square miles; and the middle level from Acton to the Lea uniting with the high level by this river, for the drainage of 16 square miles; and a low level line of 11 square miles with the same joint outlet at Barking-creek. They have also a western section not included in Mr. Roe's scheme, for the collection of the drainage of 18 square miles by means of two (10 feet and 12 feet) sewers (with auxiliary flood outlets) into one sumpt near Chelsea, and its purification and subsequent discharge into the river at that point.

Mr. Forster has two gravitating lines in his northern scheme† (excluding the western district), the Hackney-brook and the middle level, and a main low level with branches; 25½ square miles drain by gravitation, the greater part through the middle level; and 16¼ square miles by pumping power terminating in one outlet at Barking-creek.

Messrs. Bazalgette, Stephenson, and Cubitt's south scheme comprises a main gravitating line, with branches, and a main low level, with *one* branch at its lower end. Each level is to *drain* respectively twelve square miles, or a total of twenty-four miles, one moiety of which is pumped. The whole of the drainage and sewage of the twenty-four square miles is discharged by the town of Greenwich into the river Ravensbourne, at Deptford Creek.

Mr. Forster's south scheme, prepared jointly with Mr. Stephenson, consists chiefly of a low level main, with several branches, with lifting power and a discharge into the Thames at Greenwich Marshes, full two miles lower in the river than in Mr. Bazalgette's scheme, clear of, and far below the town of Greenwich, and with an alternative extension to below Woolwich. Floods were expressly and amply provided for by existing outlets, and by comparatively inexpensive diversions, included in the estimate of cost.

The details of the several schemes, so far as they can be collected from accessible documents, are as follow:—

For the northern section of the metropolis (excluding the western), Mr. Roe proposes to effect the work by *three* main outfall sewers, two 7 feet 6 inches, and one 5 feet in diameter, at an estimated cost of 753,081*l*. Messrs. Bazalgette and Haywood accomplish it by three main outfall sewers, 12 feet 6 inches, 10 feet, and 9 feet 6 inches in diameter respectively, at an estimated cost of 1,255,190*l*. or as revised by Sir William Cubitt, 1,627,000*l*.

Mr. Forster's (aided by Mr. Stephenson and Mr. Haywood), at an estimated cost of 1,080,000*l*. (The sizes are not stated, but they are believed to approximate to Mr. Roe's, as, indeed, may be gathered from Mr. Stephenson's evidence.) Making provision for floods chiefly by existing channels, all propose the *same* object over the same area; yet they give results respectively of 753,081*l*. 1,080,000*l*. and 1,627,000*l*.

On the south, Mr. Forster proposed with provision for floods by existing outlets and practicable diver-

sions) one main circular 8 feet (or less) outfall sewer, with many *essential* branches, not included in Mr. Bazalgette's scheme, as a "complete and *perfect*" scheme, at an estimated cost of 241,297*l.**

For accomplishing precisely the same object on the same ground, Messrs. Bazalgette and Cubitt propose one 12-feet low level sewer, with one branch near its termination, and two 11-feet high level sewers, at an estimated cost of 1,250,000*l.*

Mr. Forster's southern scheme was the joint production of Mr. Stephenson and himself, aided, it is said, by the local engineering knowledge; and the northern scheme (that portion close to the Thames alone excepted), although not to the like extent, had a similar basis.

Both sections had the unanimous approval of the then commission, including some of the highest engineering talent in its ranks, and, as respects the north of London, of the City surveyor, and of the City Commissioners: extensive preparations were made for the actual execution of the works, contract drawings having been got out: three large portions on the south side (said to be some of the most difficult) were let to responsible contractors upon open tender, within, or near upon, it is said, the estimated cost; and, but for financial difficulties, these works, if not most of the others, would have been considerably advanced, if not completed to a large extent.

In the interval of the promulgation of Mr Forster's and Mr. Bazalgette's drainage schemes, 1850-1, and October, 1853, some very important facts and opinions were elicitated by the Committee of the House of Commons, in evidence on the Great London Drainage Bill (June, 1853), from Messrs. Bazalgette, Haywood, Stephenson, and Cubitt.

These gentlemen, without exception, at *this* period underrate the importance of the main drainage of the metropolis, and of freeing the Thames from its pollutions. Messrs. Bazalgette and Stephenson would send another 1,000 miles of sewers into the river, whilst Sir William Cubitt would "make the Thames as it ought to be, a proper receptacle and *sewer*, to take away the filth of the metropolis and the surrounding districts."

Mr. Haywood differs from the medical men who hold it to be essential to the health of the metropolis to purify the Thames, and thinks that the effects (of the flow of sewage into the Thames), "have been excessively exaggerated," although, in his report to his commissioners, six months previously (Dec. 24, 1852), he says, "The total interception of sewage from the Thames has been a result now long and earnestly desired."

Mr. Bazalgette says, it is much more important to drain localities now requiring drainage than to purify the river by main drainage works; that 1,000 miles of additional local sewers, costing 2,000,000*l.* are required; that their discharge into the Thames would be an important advantage to the present drainage; and (with Mr. Haywood) that the evil of this drainage into the Thames has been excessively exaggerated; that it is not to be compared to the benefit which will be conferred on the public by the drainage into the Thames; that 2,000,000*l.* should be expended in local drainage before any money is laid out in a low level sewer, as it is much more important to drain those localities now without drainage than to intercept the sewers from the Thames; and that he would not recommend the expenditure of the money upon the interception of the sewage at the present time, nor until a very large expenditure, 2,000,000*l.* has been incurred in another way. He doubts the *practicability* of constructing a sewer below the level of the river; he is afraid the low levels *must* be drained into the Thames, "on account of the enormous size that will be required if it is to be connected into one drain;" says the districts below the level of the Thames would be better drained by having a drain sunk at a lower level than the river, "and pumping the contents, if you could take off all that falls from that district." "The pumping power is an enormous cost." He thinks the connection of a number of low-level sewers in the low districts a dangerous operation, because of the floodings from the main sewer; he cannot see how the flood waters are to be kept out of the lower tunnel. He thinks the sewers in the low districts should act as reservoirs, that "they should be so calculated that they will just contain the greatest quantity of water during floods." His opinion is that the rain-fall *must* be provided for in the main intercepting sewers, "unless you construct a fresh set of sewers all over those districts." He cannot see how the sewage is to be diverted from the Thames, *unless* the rainfall is provided for.

He chiefly grounds his opposition to the Great London Drainage Scheme on the small capacity of their sewers when compared to the quantity "which is to be provided for," or "that comes down." On the north, he says, the company take only 1-180th part, and on the south only 1-900th part of that "which is to be provided for," or "that comes down."*

His basis of calculation appears to have been a rainfall of 2 inches in the hour, upon, and its discharge within that hour, from an area of about 47½ square miles on the north, and 61½ square miles on the south.†

He puts the quantity "which is to be provided for," or "that comes down," at 3,600,000 cubic feet on the north, and at 4,770,000 cubic feet per minute on the south, or its equivalent, 900 by 5,300.

In June, he says,‡ "I find there is not an unfrequent occurrence that two inches of rain should fall in the hour;" but in October, '53, when reporting on the Surrey and Kent drainage, a scheme expressly designed to take *all* the *drainage* and sewage, he says, as an argument for his standard, "But storms, amounting to 2½ inches in a day, *although of rare occurrence*, have been recorded;"§ *i. e.* that his maximum standard for one class of his sewers drops in four months from 2 inches to 1-200th part of 2 inches per hour; and his maximum standard (*vide* reports) for another class of his sewers, from 2 inches per hour to 1-200th part of 2 inches per hour.

He shows (p. 15) the insufficiency of the existing sewers for storm waters, and the consequent flooding of the lower districts; he justifies the sizes of his sewers, "larger than any heretofore recommended to the commissioners, by reasoning which directly leads to a capacity sufficient for, and which he says will answer every purpose;" he immediately proceeds to show that his sewers are sufficient to carry off the rainfall as well as the sewage; and yet he thereupon proposes that the existing main sewers in the low districts should act as reservoirs during extraordinary storms, after he has cut off all the upland drainage, constituting one-half of his entire area, reduced his standard of rainfall twentyfold, and applied this reduced standard to one-half, and a standard still further reduced to the other half of an area, less by 60 per cent. than that which he puts forth in evidence as the area for which provision requires to be made.

The following are Sir William Cubitt's opinions:—

Sir William thinks it unnecessary to prevent the sewage of the metropolis passing into the Thames, if proper means were taken to make "the Thames *as it ought to be, a proper receptacle and sewer*, to take away the filth of the metropolis and the surrounding districts."‖ Proposes to extend mouths of sewers by cast-iron pipes under low-water mark. "thinks no sewer should be made in a public street that a man could not walk into and clean out." Never knew a sewer too large yet. They cannot be less than 3 feet high (for entry of men to rake out and repair: 5 feet, or 5 feet 3 inches, and 3 feet 6 inches wide, is a very good sewer. "All you want of a sewer is to have a flat *bottom* of about 9 or 10 inches, made so that a man can step with his feet and work in comfort, which he cannot do in these circular sewers."

Whether we are to have a system of intercepting sewers or not, still that (extending the sewers to low-water mark) ought to be done?—Yes.

The intercepting sewers can be made at any time *if they are worth being made, but they ought not to be made at the cost and loss of time of the proper sewage.*

The great desire was to get rid of the impurities from the Thames? The public have talked a great deal, and have always done for the last thirty years, without knowing what they talked about; just as busy men set them about, and newspapers wrote to call the public attention to it. In his report on the report, plans, and estimate of Mr. Bazalgette for the drainage of the northern district of the metropolis, by means of the Hackney brook, or northern high level intercepting sewer (Oct. 13, 1853), he states that the scheme, although a portion only of the north of Thames drainage, is a perfect measure of itself, and, having most important objects to effect, *it cannot, in my opinion, be set about too soon.*

Page 8, strongly recommends the whole district "comprised in Mr. Bazalgette's report, extending from the Ranelagh sewer, in the Kilburn-road, on the west, to Old Ford, on the river Lea at the east, to be carried out at one time."

Entirely concurs in the principle and details of Mr. Bazalgette's report¶ on this (the Surrey and Kent) drainage (estimate excepted), which "is to *drain, take off, or intercept, all the rain water and sewage which now falls into the Thames from an area of at least 24½ square miles,—of one-half of which the rainfall can be intercepted and taken off by gravitation, but the other, the lowest half, would have to be pumped up.*"

Adverts to the pumping station at Deptford-creek as a most excellent situation for the manufacture of sewage manure, "*by* which means the sewage water would be deodorized, and delivered into the Thames divested of its most offensive and deleterious matters."

Page 24, "A circumstance which cannot, in our judgment, be too strongly impressed upon the *minds of those who are crying out* (and certainly *not without reason*) *for improved sewerage.*"

Page 24,—thinks the sooner the scheme is carried out the better.

Mr. Robert Stephenson (then a Commissioner, in conjunction with his eminent colleagues, Sir John Burgoyne, Capt. Vetch, Mr. Rendel, and Capt. Harness, a committee to whom the task was expressly confided) carefully studies 150 to 160 competitive plans for the drainage of the metropolis; and examines the greater part of London, with a view to its main drainage.* Thus prepared, he designs, in conjunction with Mr. Forster, the then chief engineer, and locally assisted, the southern drainage, mainly consisting of an 8-feet low-level sewer with branches, with express and ample provision for storm waters by existing sewers and practicable diversions, included in the estimate of 241,297*l.*

The *Times*, of 10th August, 1850, records his eulogy of this, as he expressed it, "complete and perfect scheme," in his place in the Commissioners' Court of the preceding day; his anxiety for its immediate execution, and the perfect unanimity of his eminent colleagues.

The plan of the southern drainage having received the sanction of the Court,† the nature of the ground having been tested by borings, and the detail plans, sections, drawings, and specifications prepared, advertisements for tenders of a portion of this work were inserted on the 22nd of November, and the tenders opened on the 3rd of December, 1850, and a tender for the completion of this work was conditionally approved; and shortly afterwards, two other large portions were similarly let. The works under these contracts would already (Feb. 10, 1851) have been commenced, and now be in active progress "but" for financial difficulties.

The northern drainage was approved by the Metropolitan and City Commissioners, by the City surveyor, Mr. Haywood, and with the exception before mentioned by Mr. Stephenson; but it was not carried into effect, because the Commissioners had no means of getting money.

Mr. Stephenson, in his evidence on the Great London Drainage Bill (June, 1853), whilst in one place he alludes to his recommendation to drain the low parts of the south side *first*, in another says, we ought to *begin* by intercepting the sewers above; that the lower parts of London would take care of themselves very well, that the lowest interception ought to be the last to be done.‡ Admitting the prolongation of the period of the pollution of the river, he thinks the best way is to look at what will be the best thing ultimately; and in the same breath he doubts the necessity for main drainage, and following Mr. Bazalgette, thinks the money would be better spent in improving the present system of drainage, leaving the main works to be carried out at some future time. But on 11th December, 1854, he says: "By almost universal consent, the time has now arrived when some remedy must be applied;" and he speaks of a river (when the stream is constant towards the sea) as "the most efficient sewer that man can avail himself of." Approving of Mr. Bazalgette's Hackney Brook scheme, he says, that it will be of scarcely appreciable effect unless followed up by designs of much greater magnitude; and at this period, he admits the urgent necessity for attending to the low parts of the south side.§ He subsequently approves with Sir Wm. Cubitt the "principle and details of Mr. Bazalgette's Surrey and Kent drainage scheme, which he says is to drain, take off, or intercept all the rain-water and sewage "from an area of at least 24½ square miles," of one-half of which the rainfalls can be intercepted, and taken off by gravitation; but the other, or lowest half, the greater part of which lies below high-water level, would have to be pumped up and delivered into the river at some point below London, say Deptford-creek, in the first instance, and subsequently at some point lower down the river, should such an extension be deemed advisable.

It would appear that at one time he had contemplated, or proposed an open intercepting sewer for this side.‖ In his report of 15th May, 1854, he thinks the North low-level sewer does not press for immediate attention, and that the construction of the upper and middle levels will render the low level comparatively less important, the middle level being now, in his opinion, one of the most important features of the scheme, no part being more effective—none can be so

ill spared or postponed. He recommends, because of the low levels, the collection of the west district drainage in one sumpt *within* the area, the purification of the drainage, and the discharge of the liquid residue into the river at this point; a system to which he saw "serious objections," when reporting on 8th March, 1850, in conjunction with Sir John Burgoyne, Capt. Vetch, Mr Rendel, and Capt. Harness, the results of the examination of the competitive plans for the drainage of the metropolis.* Mr. Stephenson strikes at the root of every tunnel scheme, when he expresses his apprehension of the tunnel sewers silting up when floods master the lift, and check the velocity of the current. The illustration to his hand is the great London drainage tunnels, falling 4 feet per mile; his own tunnels fall at a much less rate, and would of course be still more open to this objection.

Sir William Cubitt, in August, 1848,† and June, 1853, thinks such tunnels impracticable, "to say the least," whilst in October, 1853, he proposes them.‡

What are the opinions of eminent engineering contemporaries upon vital points? They have strongly varied.

Mr. Hawksley,§ instead of localizing the western district, would take it to Bar Creek. He would extend the southern sewer to Wandsworth He would deepen the low level lines on both sides very considerably (he says 15 feet on the south); he would have his sewer below the Victoria-street sewer.

Messrs. Bazalgette, Haywood, Stephenson, and Cubitt, in their reports on the main drainage, fix the maximum rainfall for their sewage intercepting lines to take at ¼-inch equally spread over the twenty-four hours, or the one-hundredth part of an inch per hour.

Mr. Brunel would provide for ½ an inch the twenty-four hours, or the one-fiftieth part of an inch per hour at the least.‖

Mr. Hawkesley would not provide for less than (1¼ inch in the twenty-four hours or) one-sixteenth part of an inch per hour.¶

Messrs. Brunel and Hawkesley, both eminent engineers, are, therefore, at issue with the Commissioners' engineers on this *vital* point; the one would double the capacities for rainfall, the other would treble these doubled capacities, increasing the originals sixfold.

Sir William Cubitt approves of dealing with the sewage at several points.

Messrs. Bazalgette and Haywood suggest grave doubts of the expediency of arriving at a decision on their own scheme of main drainage, which the manipulation of the sewage may, as they say, hereafter either entirely set aside or greatly modify.**

In this confliction of opinion the Commissioners are required to accept their *immediate* predecessors' schemes, involving eight main outfall sewers, varying in size from 9 feet 6 inches to 12 feet 6 inches; steam-engines of from 4,000 to 5,000 horse power (*vide* reports); and an *estimated* expenditure of 3,000,000*l.* as contrasted with a scheme proposed by a former eminently engineering commission, including their present chief consulting engineer, costing 1,321,297*l.*

The 3,000,000*l.* should be increased to 5,000,000*l.* so as to include the 2,000,000*l.* for the 1,000 additional miles of local sewers said to be required, or rather to 8,000,000*l.* at the least, if the estimate is framed upon the apparent cost of their local sewers, namely, 1*l.* per foot; or full forty years' purchase of the present (gross) sewers-rates. Be it observed, these are only the *estimated* costs; that a further very large expenditure is contemplated in the shape of enormous reservoirs in the uplands, with lifting steam establishments by the Thames, for the purpose of cleansing these main and local sewers; that there must be a large expenditure in apparatus to work the cleansing process; and that there must be large establishments to work the steam power at each reservoir station, and at each station where the sewage is lifted, an enormous consumption of coal; many constant repairs and continued depreciation, involving a very large additional immediate outlay to the above 5,000,000*l.* as they put it, or 8,000,000*l.* as it (more nearly) would be, and a very costly current expenditure.

After all this prodigious contemplated outlay, these enormous main sewers, as well as the local sewers, are acknowledged to be most imperfect works; for in his place in court, at one of the very latest of the late Commissioners' assemblies, Mr. Hawkshaw, a very eminent engineer, expressed his full conviction (a conviction apparently concurred in by his colleagues) that the sewers, especially the main and intercepting sewers, would not be kept in a proper state of cleanliness unless very large quantities of water were passed through them from large elevated reservoirs, supplied by steam power, lifting from the Thames; an admission of the evil of interception upon the lower parts of the sewers from which it ents off the flow, leaving the channels comparatively dry; but dry with noxious filth, rapidly causing accumulations of deposit, and ultimately, if not constantly seen to, choking up the sewers, and an admission of the reactionary effect of enormous sizes and small falls on an otherwise adequate intercepted flow. Evils to be inflicted, as on the south side, by a sixfold greater capacity, and a fivefold greater cost, as in Mr. Bazalgette's scheme, as contrasted with Mr. Forster's

A slight examination of that 2-inch in the hour rain fall and discharge theory (one of Messrs. Bazalgette and Stephenson's chief grounds of opposition to the Great London Drainage Scheme) is of some importance in the consideration of the main question. On their southern area, this fall and discharge produces, as they state it, about 4,770,000 cubic feet per minute. On their northern area, of 3,600,000 cubic feet per minute,—or in the whole 8,370,000 cubic feet per minute—220 of their 12-feet low level sewers would discharge 4,700,000 cubic feet per minute on the south. Imagine a 12-feet sewer of theirs ranged at about every 60 yards along the southern margin of the Thames, or between Vauxhall-bridge and Deptford-creek, and disgorging its contents, and this will give a literal idea of that 2-inch in the hour fall and discharge, producing on the 6¾ mile area on the southern side, 4,770,000 cubic feet per minute.

Take the 8,370,000 cubic feet per minute on both sides of the metropolis, and compare it with the standard of the (stated) Thames flow at Teddington lock in summer weather, of three million cubic yards per diem, or 56,250 cubic feet per minute,* and the equivalent of that 2-inch hourly fall and discharge, will be this Thames flow 148 times repeated. Double the standard, so as to avoid a chance of over statement, and the 2-inch fall and discharge are still seventy-four times in excess; and this is the proportion nearly of that fall upon the south, as compared with the capacity of the three sewers for that part, designed for taking twenty times less rate of rainfall on sixty per cent. less area than the promoters' respective standards of June, 1853. Followed out to its legitimate consequences on the whole area of the Thames basin, the reasonings of the Commissioners' engineers would lead to the most extraordinary results. For when applied to, probably, a fiftieth part of that basin, it repeats the Thames flow 148 times, or shows that you have had, and that you may expect to have occasionally on this fiftieth part of the Thames basin, on this section of the metropolitan area, falls of rain and like discharges within one hour, equal to 148 times such rivers as the Thames!†

The ultimate bearing of the hypothesis of the 2-inch hourly fall and discharge, is this:—

1. That over the whole area the fall is equal.
2. That all areas like in superficies discharge the fall at equal rates and in equal quantities, whether they may be composed of dense towns or of open country, whether they may be absorbent or non-absorbent, whether they are hills or flat marsh land; and that the sinuosity and length, and fall of the discharging channels, are indifferent.
3. That the discharge of the whole quantity is effected exactly as it falls, or instantaneously.

We desire that our observations may be taken in good part: we have but one desire, and that is to assist in determining on the best course. The statements we have contrasted, show how difficult it has been to arrive at correct opinions on these subjects. We may have something to say on Mr. Roe's scheme, and the report upon it, hereafter.

A NEW SYNAGOGUE IN LONDON.

THE Jews have built a new synagogue in Great Portland-street, Oxford-street. The interior has a large enriched dome, rising from four Corinthian columns, with groined and coved ceilings on each side. The ark has damson-wood doors and gilt mouldings, with scagliola columns, and is approached by marble steps. Mr. Clarke, of Fenchurch-street, was the architect; and Messrs. Clever and Stanger, the builders.

THE CEMETERIES AT HANWELL.—The chapels in the cemetery for St. George's parish, and the chapel in the Kensington cemetery, both at Hanwell, are approaching completion. Messrs. Higgs and Cullingford are the builders.

CHRIST CHURCH, CRAVEN-HILL, BAYSWATER.

THIS church, now in course of erection, is situated on the north side of the Bayswater-road, opposite Kensington-gardens, on land formerly occupied by Hopgood's Nursery, and which is intended to be laid out for building houses, of the same class as Hyde-park-gardens. The estate has been so planned as to place the church in the middle of a square, and the approach from the Bayswater-road will be by handsome entrance-gates and lodge through a road 100 feet wide. The style of the church is the Decorated. The building consists of nave, aisles, and transepts, with porch, chancel, and adjoining aisles, and lofty tower and spire at the south-west corner. The nave is 113 feet 3 inches long, divided into four bays, besides the large arches across the transepts, and 26 feet 8 inches wide in the clear between the shafts of the columns. The width of the aisles on each side of nave is 15 feet 10 inches, and the total width of the church is 63 feet. The length across the arms of transepts is 91 feet in the clear, and the width is 26 feet.

The chancel is 32 feet long by 24 feet wide: the aisles on each side are 18 feet 9 inches long by 15 feet 6 inches wide, one being used for a vestry, with the organ chamber over, the other arranged for sittings. These aisles will be separated from the chancel by rich wainscot panelling and stalls. The church is lofty and large, and promises well internally.

The tower and spire rise from a square base, about 25 feet 6 inches external dimensions: the tower is to be terminated by perforated battlements, and angle pinnacles, with enriched flying buttresses to spire.

The spire is crocketed, and has three tiers of dormers: the total height of it to summit of vane is to be 205 feet.

The church is faced externally with Kentish rag stone, laid in even courses: the dressings, windows, columns, arches, and other details are in Bath stone.

The roofs are of lofty pitch: that for the nave is equilateral with carved hammer-beams, and open tracery fillings-in: that for the chancel will be panelled, with moulded ribs, and carved bosses at the intersections. All the windows in the chancel, and probably the large window at the end of nave, will be filled with stained glass, by Wailes, of Newcastle. The chancel will be paved with Minton's tiles. The pulpit and reading-desk will be of wainscot.

There is no gallery at the end of nave, but the side galleries, which are unfortunately necessary to obtain adequate accommodation, are arranged to interfere as little as possible with the effect of the interior, by being kept clear of the nave columns. Those in the transepts reserved for children, are approached by separate staircases, and do not project beyond the aisle walls.

The fittings will be of deal, stained, the seats in the central passage having stall ends, terminating in carved finials.

The church will accommodate 1,600 persons, including children. Mr. Myers, who is the contractor, is bound to complete it ready for consecration by the first week in June next. The belfry stage of tower and the spire, are to be reserved for subsequent erection. The total cost of the church, exclusive of the works reserved, will be about 14,000*l.* The architects are Messrs. F. and H. Francis.

THE SCOTTISH NATIONAL ART GALLERIES AND THE ROYAL SCOTTISH ACADEMY.—A correspondence has been published in the Edinburgh papers relating to the purposes of the new art galleries on the Earthen Mound at Edinburgh, as to which some doubts are said to have of late existed. The correspondents were Sir John Watson Gordon, the president, and Mr. D. O. Hill, the secretary of the Scottish Academy, on the one hand; and Sir William Johnson, late Lord Provost of Edinburgh, on the other. One of the letters is addressed by Mr. Hill to the Hon. B. F. Primrose, secretary to the Board of Manufacturers, and requests the Board, on the part of the president and council of the Academy, to keep in view that one-half of the new buildings are required by the Academy.

CHRIST CHURCH, CRAVEN-HILL, BAYSWATER.—MESSRS. F. AND H. FRANCIS, ARCHITECTS.

ARCHITECTURE.

A POEM.

What great power doth waken feeling
In your columned hall, so high?
Is it the dim shadows stealing
Into deeper mystery?
Or the golden sun revealing
Forms of light and symmetry?
Is't the vernal hand of Time,
With his choicest tints adorning?
Or the vapours of our clime,
Crowning with the dews of morning?
Many a tale doth hang thereby;
Many a knightly battle-cry,
And deed of ancient chivalry,
Its echoing stones could tell.
Often has the passing bell,
From yon high, enriched tourelle,
Smote, with dismal, solemn swell,
On the 'nighted wanderer's ear,
Waking many a dreadful fear
Of the fiend's unholy yell;
Or sheeted ghost from off his bier,
Rising slow with intent fell.
O'er the time-worn battlement,
With green lichens thick besprent,
From the storied oriels,
That o'erlook the silent dells,
Where the peaceful herdsman dwells,
Many a joyous face has peered,
Many a witch has wrought her spells,—
Witchery unwrought by weird,
But often worked by fair damsels.

Now, no more the laughing tide,
Issues from the portal wide,
Fall'n, the grim portcullis,
Level is the deep abyss.
Whither are the waters fled?
Would'st thou know? go ask the dead!
Yon their effigies do lie,
Calmly gazing up on high,
Ever fixed upon the sky:
Midst the sunshine and the rain,
Evermore they rest the same.
Dost thou seek for peace of mind?
Still look up and thou shalt find:
If the golden crown thou'dst win
Spurn the gilded toy of tin.

Not in olden legends lie,
Nor in beauteous symmetry
The spirit-moving power;
But in thoughts that never die—
Thoughts that have their birth on high
In a holy hour.
'Tis the soul of him who wrought:
From his mind so richly fraught,
Sprang the noble tower.
Though we do not hear his name
In the trumpet blast of fame,
Resounding evermore;
Yet his might is still the same—
Still the ringing links remain,
As in days of yore.
Often does the clanging chain,
In the wanderer's rapt brain,
Its thrilling echoes pour.

Wist we not who raised on high
Egypta's spectral pyramid,
Where old Nilus rolleth by,
'Neath the flowing lotus hid,
Midst the flaming, orient sky,
And the simoon's onward skid?
Myriads of mighty phantoms,
In those Titan caverns lie,
Phantoms that with glassy eye,
Seem the keepers of the tombs.
Once they danced upon the spot,
Now their memories are forgot:
Nought the sceptre and the crown,
And the purple 'broidered gown;
Nought the king and nought the man,—
All is nought since earth began,—
Save the heaven-inspiring thought,
In the stones so nobly wrought.

So on Rome's imperial heights,
And at Athens, desolate,
Still the spirit's feeling lights
Temple's brow and triumph gate:
Still a history remains,
Free from history's foul stains.

So in each cathedral pile,
That sheds a radiance on our isle;
Where the cross uplifted high,
Teaches manhood how to die;
Where each stone with face so fair,
Wrought with workmanship as rare,
Murmurs soft to passers by,
Telling how religion's power,
Can transform the savage hour,
Unfire the wrathful eye;—
There! within those holy walls,
Seated in the carven stalls,
Listen to the choral sound,
Echoing in aught around;
Through the mighty, arching nave,
And the dim triforium,
Reverberating wave on wave,
List unto its pendulum.
Then look up, and unto thee,
The stones shall soothly speak,
In voices low and meek,
As murmurs of the sea:
Everlastingly and deep,
To thy inmost soul they creep,
Beguiling thee in tears to weep,
For thy sin and for thy sorrow,
Making holier the morrow,
And teaching thee in stones to find
Purity and peace of mind.
He who says that Art is dead,
That her vital light is fled,
Says not well.
Style is but a robe, in which
Necessity's cold forms t'enrich
As in a shell:—
Thus religion erst hath been
In olden times, a mother queen
At Egypt and at Rome,
And in our island home:—
Thus beneath her watchful eye,
Guided by necessity,
Art has ever grown:
Now escaped the leading string,
Nought doth check her soaring wing,
She may float in realms of light,
Spacious as the womb of night.

Art! a spirit! cannot die,
Though she pass from human eye,
Though within the sombre tomb,
Buried 'midst an age's gloom;
Yet again the soul shall rise,
And raise a temple to the skies,—
Not as they of old did build
In necessity's frail bound,
Nor by form to order drilled,
But from a foundation sound,
Built upon eternal mind:
Grandly shall her towers upspring,
And all peoples rest shall find
'Neath the shadow of her wing.

Once again the time is come,
From a darksome sleep has sprung
Our beauty-moving art:
Once again in might renewed,
Are the stones with life imbued,
By the master's heart:
Fashioned perfectly each part,
Science laid as in a chart,
From the threshold of earth's sod
Up to Heaven's gate,
Nearer still to Heaven's God,
Raise we our estate.

He who builds the surest now,
He who wears the purest brow,
Scattering flowers everywhere,
Will therein have joy, I trow,
To be crowned with honour there.
All are workers, none may idle,
All have power to wield the bridle,
And to guide the wayward steed
Through life's thorny, chequered mead.
All can build, but they do best,
Who build beyond earth's sombre crest;
Building not for shining gold,
That perishes when life is cold,
But building Wisdom, Truth, and Love,—
A Babel to the realms above.

Thus, O man! to build aright,
Build with poets', painters' might,
Build with love and calm delight.
Stamp each stone with earnest feeling;
In the rock thy soul revealing:
Cast aside all worldly dross:
Purify thee from its floss:
Nought is there of poor degree,
But thy mind and fancy free,
Can enrich its quantity;
Nought of baseness, nought of earth,
But thou mayst increase its worth.
Yon Sierra's snow-clad height
Is not gained at a single flight;
Nor with nerveless step and slow,
Wilt thou reach its alpine brow;
But with steadfast, earnest soul,
Thou mayst win high Heaven's goal.

W. G. BEAVAN.

DOINGS AT THE METROPOLITAN BUILDINGS OFFICE.

OUR London readers at all events are aware that for some time past differences have prevailed between the official referees and the registrar of metropolitan buildings, which have greatly impeded the proper execution of the law, have tended to bring it into disrepute, and have increased the difficulties of the district-surveyors. The operation of the differences of opinion is, that on considering the decisions come to by the referees, the registrar conceives in various cases that they have proceeded erroneously, and refuses to seal their awards. When sent to the Board of Works, the Board sometimes authorise the registrar to affix his seal of office to the intercepted documents thus overruling his objections, but more commonly confirm his refusal of the seal, and the whole of the litigation is thus suspended. The Board of Works have at times intimated to the referees, that it was their duty either to alter the already executed documents, or else to make others, but the referees felt they could not do so. The latter offered, however, to record any decree avowedly on the responsibility of the Board of Works acting as an appellate court, but this was declined.

In party wall cases, of great importance to individuals, a special difficulty was found. Unless there is error on the face of the certificate given by the district surveyor, or an appeal is brought by one of the parties, its confirmation by the official referees is a matter of course, and they consider there should clearly be no hearing of the parties on it. But the registrar thinks differently, and withholds the seal from certificates of confirmation on that ground, although if the parties did appear, and the official referees heard them, the decision of the official referees is made final by the 24th section.

Under these circumstances the referees thought it necessary to obtain the opinion of counsel, and a case was prepared and submitted to Sir Richard Bethell, Solicitor-General, Mr. Serjeant Byles, and Mr. Charles Winston. The question mainly was as to the nature of the control over the acts of the referees vested in the Registrar and the Board of Works; and we give so much of their reply as answers this. The remainder advises as to the mode in which the referees should take the opinion of a Court of Law upon it:—

"We are of opinion that the instruments required to be sealed under sec. 89, are of two classes.

First. Certificates, summonses, and consents granted by the official referees, and expressly *required to be sealed*, by secs. 15, 16, 85, and 117.

Secondly. An award when it is proposed to enforce it by process from the Court of Queen's Bench (sec. 83), and a copy of it when wanted for evidence (sec. 86).

Over the first class of documents, the Registrar and the Commissioners have a controlling power. The Registrar may refuse to affix his seal of office, where on the face of it the document appears to him contrary to law, or where it is informal, or manifestly *ultra vires*. The Commissioners may review the Registrar's decision, but must proceed on the same grounds.

But over the second class of documents, viz.—awards and copies of awards, we are of opinion that neither Registrar nor Commissioners have any controlling power, but that the duty of the Registrar to fix the seal is purely ministerial.

We are further of opinion, that upon a submission to the referees in their judicial character of a question between party and party, as soon as they have once made their award, they are *functi officio*. That they can neither make a second award, nor (which is really the same thing), alter their first award; and more than that, we think it would be very dangerous for them to attempt it, for in an action for damages for acts done under the authority and direction of an altered award, they might be unable to shelter themselves under the protection of the Act of Parliament."

Difficulties have increased instead of lessened, and render some immediate steps imperative. We do not desire here to judge between the

referees and the registrar, but we are bound by our duty to the public, which we have never knowingly shrunk from, whatever might be the personal risk, to declare that the present condition of the Office of Metropolitan Buildings is a discredit to the country, seriously inconveniences a large number of persons, and tends to bring the law and the administrative powers of the kingdom into disrepute. An inquiry ought immediately to be instituted with the view of either making clearer the duties of the two departments, or, if these duties be already clear, of superseding those who will not perform them in good faith, and work harmoniously with their coadjutors in the office.

PROVINCIAL NEWS.

Battles (Essex).—At the recent quarter sessions for Essex, a letter was read from Messrs. Low and Blount, who had prepared the plan for Battles bridge, stating that, in consequence of the rise in the price of labour and other matters, they had not been able to obtain a contractor at the sum stated, but Messrs. Cottam and Hallan would take it within 60*l.* of it: they had also in consequence prepared another plan on girders and iron columns at a cost of 1,200*l.* It was proposed to accept the tender for the erection of the bridge at 1,560*l.* the idea of the other, at 1,200*l.* apparently not being much entertained; but it was stated that there was nothing in the offer to make it binding. It was resolved, therefore, to refer the matter back to the committee, to consider it, obtain tenders for the erection of the bridge, and report.

Rochester and Chatham.—The opening of St. Margaret's new National Schools took place on Thursday in week before last. The buildings comprise a boys' and girls' school, the former 50 feet in length by 18 feet in width, the latter nearly the same length, with the addition of a class-room: the schools communicate by folding-doors. There is also an infant school-room, with residences for the master and mistresses. The cost of the erection of the premises is 1,400*l.* of which 500*l.* were obtained from the Committee of Council on Education, and 100*l.* from the National Society, 800*l.* having been raised by subscriptions. The site and a portion of the buildings were conveyed by the parish for educational purposes, which lessened the sum required (3,000*l.*) The building was erected by Mr. Spicer, of Strood, from plans furnished by Mr. M. Bulmer, architect.

Bristol.—It is said that a peremptory order has been received by the local authorities of this city from Lord Palmerston, requiring them to at once erect a new asylum for pauper lunatics, at a cost of 20,000*l.* at least.——At a preliminary meeting, held on Monday week, the mayor in the chair, it was resolved forthwith to take measures for the formation of an association for the improvement of the dwellings of the working-classes in this city. The bishop convened the meeting, and announced his intention of taking shares to the extent of 250*l.* Mr. Daniel Cave promised a like sum. The Mayor, Mr. R. P. King, Dr. Symonds, and others, entered their names as shareholders; and in all, shares to the amount of about 1,000*l.* were taken. It was remarked by the bishop, that he knew no point on which such complete unanimity of feeling prevails among all parties as that of the necessity of improvement in the dwellings of the poor.

Aberystwith.—The old town-hall has been pulled down, and plans and specifications are being prepared for a tower, to be built on the site, with a town-clock. The commissioners have fixed upon a spot near the meat-market for erecting a building for commissioners' meetings and other public purposes, but principally for having a fish-market beneath it.

Liverpool.—"Briscoe's New Hall," Oldhall street, is now "reared," and ready for the roof, and will be complete for occupation early in the spring. The buildings are situate about 200 yards from the Exchange, adjoining the Old Hall, and are intended for merchants' offices. The style is Italian. Mr. Culshaw is the architect. The proprietor of these buildings, according to the *Journal*, must have expended not less than 15,000*l.* on this property. The tradesmen celebrated the rearing by dining together at the White Bear Hotel, Dale-street.

Doncaster.—The local *Chronicle*, in speaking of the new streets and numbering of houses at Doncaster, says, "The new part of the town is, we observe, fond of aristocratic names; and, although new houses have recently sprung up without any principle, social, sanitary, or architectural,—just in the way that we have read of in the cases of San Francisco and Melbourne,—and even in some instances before proper measures were taken for a supply of water, road communication, or removal of refuse, there is a strong feeling to perpetuate the names of some of our leading noblemen. But our principal object is to call the attention of the Board (of Health) to the fact that an order was made some time ago, that the whole of the houses in the town should be numbered. This work seems to have been suspended."

Shields.—The *Sunderland Times*, in a paragraph, titled, "What will be done in Shields in 1855?" says, St. Hilda's Churchyard, South Shields, Christchurch-yard, North Shields, and the burial-place in Tynemouth, will be closed. A system of sewerage will be carried out in North Shields. The same in South Shields. The foundation-stone of the magnificent docks at Jarrow will be laid. The piers at the harbour mouth will begin to rear their heads above the German Ocean; and Jarrow, Howdon, North Shields, and South Shields, will be joined together by a bond of swift running steamers. The foundation-stone of the Sailors' Home will be laid at North Shields this spring, and the building will be covered in by the end of the year. South Shields will begin to build a new town-hall, and a much needed public room for herself; and the members of the North Shields Mechanics' Institution will abandon their disputes, and lay the foundation-stone of their public building.

Penrith.—It has been resolved here to appoint a provisional committee to obtain information as to a site for baths and wash-houses, and to draw out a prospectus, &c. to lay before the inhabitants. The project is to be carried out by shares not exceeding 1*l.* each.

Aberuthven.—Gasworks are spreading over the whole of Scotland. One has recently been opened in the village of Aberuthven. The mason-work was executed by Mr. James Stevenson, of Aberuthven, and the iron-work by Mr. John Douglas, of Cupar. The number of burners for which the work is erected is estimated at from 300 to 500.

CHURCH-BUILDING NEWS.

Skellingthorpe.—On Wednesday in last week, in celebration of the covering in of the new church of St. Lawrence, at the village of Skellingthorpe, near Lincoln, a supper was provided at the Stone's Arms Inn, to which the whole of the workmen engaged in the building were, by Mr. Wm. Huddlestone, the contractor of the works, invited. Supper was partaken of by upwards of sixty persons. The new church is in the Early English style, built of Lincoln stone, with Ancaster dressings, and covered with Staffordshire tiles, with crested ridge. The church consists of tower, nave with four arches built upon inverted arches, north aisle with four lights, south aisle with three lights, and south porch. The nave is 48 feet long by 15 feet 9 inches wide, and the aisles are about the same. The chancel is 32 feet by 16 feet, with vestry 10 feet square on north side of chancel, and heating vault underneath. The roof is of fir, the principals of which consist of an arched brace, supported by a stone corbel. The whole of the roof is boarded down, and is intended to be stained and varnished. The interior of the nave and aisles will be fitted with open benches, stained and varnished, and the floors will be laid with alternate black and red Staffordshire tiles. The pulpit, according to the *Lincolnshire Chronicle*, will be built of Caen stone. The chancel fittings will be of oak, and the floor will be paved with Minton's encaustic tiles. Messrs. Kendall and Pope, of London, are the architects, and Mr. Wm. Huddlestone, of Lincoln, is the builder. The foundation of the new structure was laid in September, and it is believed it will be ready for Divine service in April.

West Bromwich.—A large stained-glass window, in memory of the late Earl of Dartmouth, has recently been completed, and placed in the east end of the old church here. It occupies nearly the whole of the space over the communion-table. The window is in three compartments. In the first, or centre compartment, "the Ascension" is represented. The "Dove," emblematical of the Holy Ghost, is the most elevated figure: then follows that of the Redeemer, supported by angels on each side, while beneath are the two Marys and eleven of the Apostles, in varied attitudes. Beneath this representation the stork (as an emblem of the church) is depicted, feeding her young ones. The side windows are floriated. The one on the left exhibits a scroll, enveloped with flowers and geometrical figures, bearing the words,—"It is sown in corruption: it is raised in incorruption. It is sown in dishonour: it is raised in glory." Intermediately in this sentence is a shield bearing his lordship's family arms. The right-hand side window is of similar pattern. The scroll, on this side, displays the words,—"It is sown a natural body: it is raised a spiritual body. It is sown in weakness: it is raised in power." Beneath the whole, in Saxon capitals, appears the dedication. The window is the result of a public subscription. The work itself has been furnished by Mr. Wailes, of Newcastle-upon-Tyne.

Smethwick.—The design for the new Wesleyan Chapel here is intrusted to Mr. G. B Nichols, architect, who is preparing the necessary plans for its erection.

Stonehouse.—The parish church, which has been closed for a year and a half, for the purpose of undergoing complete repair and restoration, was opened for divine worship on Thursday week. The old tower remains, and is of a plain square Perpendicular style. The new part of the church is also of the Perpendicular style, consisting of a nave and two aisles, and a small chapel or organ-chamber at the east end of the north aisle. The exterior of the church is very plain, and though quite out of proportion with the old tower, this is said to have been unavoidable, as the funds would not permit the rebuilding or raising of the latter, and the church was required to be of its present size, viz. to accommodate 464 persons. The whole of the seats are open, and of Riga oak, simply carved. A large proportion of the seats in the nave are free. The east end of the chancel has a window, corresponding with the general style of the building, and of stained glass, representing the various passages in our Saviour's life. It was executed by Wailes, of Newcastle. This, together with the north and south window of chancel, and the western tower window, also of stained glass, are gifts of the Rev. Thomas Peters, the rector of Eastington. The original Norman doorway, which stood on the north side of the old church, has been retained, as a relic of the old edifice, and stands as nearly as possible in the same position as before, forming the northern entrance to the present church. The dimensions of the building inside are 62 feet by 45, exclusive of the chancel, which is 22 feet by 18. The roof is open timber work, and the height from floor to apex of nave or centre roof is about 40 feet. There is a western entrance under the tower, divided from the church by a carved oak screen of open woodwork, glazed with plate glass: this is under the tower arch. The whole cost, including all expenses, will be about 2,000*l.* raised by voluntary contributions, but still short by some 300*l.* or 400*l.* Mr. Henry Crisp, of Bristol, was the architect employed, and the contractors were Messrs. Wall and Hook, of Rodborough.

Halifax.—A large field has recently been set apart by Mr. E. Akroyd, of Bank Field, for the purpose of forming a burial-place, more especially intended for the accommodation of the residents in North-ward, Old-lane, and Newtown. The ground measures about 16,940 square yards. Nearly 3,500 yards will be appropriated to walks and shrubberies. The ground will be laid out according to plans proposed by Messrs. Mallinson and Healey, architects. A chapel will be built in the centre, and the place will, it is said, in point of finish, not be left behind the cemetery already at the other end of the town, in Lister-lane.

WAR APPLIANCES.

IT is to be hoped that the present vital struggle with despotic barbarism will once for all render war impossible, by maturing its deadly energies beyond all human endurance or resistance; and this can only be done by the more enlightened and inventive portion of the human race, and hence by those who ought to acquire the mastery. It may be, however, that the present pretence of suing for peace on the part of the Czar, is only so far sincere as to lead to the patching up of some sort of mutual understanding which may stave off the evil day; although it is but too likely to be another of those sinister devices by which cunning will only overreach itself, and undeceive others, in the end. Meantime inventive genius is aroused to martial projects, and every day almost reveals its mental workings towards one grand end, the rendering of warfare too deadly to withstand. One sanguine projector has devised an "electric rifle," to throw 100 bullets a minute, or 6,000 an hour, with a precision and force not yet attainable even with the aid of our good ally, the Minié. Another has invented a double cannon, which will simultaneously propel two chained balls in such a way as to radiate asunder, and stretch the chain to its utmost length, sweeping down whole columns or regiments at once. This gun has actually been tested in Battersea-park, it appears, to the "great satisfaction of all who witnessed its work." A chain of 60 feet in length, is spoken of as practicable with a gun and balls of proportionate calibre. A new sort of ball has been invented, named the belemnite, which is wedge shaped, and will, it is said, very speedily penetrate and overthrow stone walls instead of merely bruising them and dropping to the ground as the ordinary round ball does. Belemnite shells are also spoken of, which will add explosive force while so fixed in the fortification walls. The effective Minié principle applied to cannon, is said to be at present under consideration of the Board of Ordnance. Windage is thus to be got rid of, and the full force of the explosive power made effective by means of expanding leaden rings and conical plugs behind the conical pointed balls in the rifled cannon. Gunpowder itself is likely after all to be superseded by gun cotton, which the Austrians are said to be successfully substituting for it in the working of ordnance. A Mr. A. C. Smith has invented a new projectile power, which he calls the "lightning projectile," and which is based on the expansive force of the aqueous gases, brought into play, or fired, by electricity. Mr. Smith's inventions are actually said to be in course of adaptation to ordinary cannon at Woolwich. The power thus evoked is declared to be more than one and a half greater than that of gunpowder. The "lightning projectile," is likely to beat the steam-gun hollow, if all be true that is said of it. A new steam cannon, by the bye, is being founded in France, on an old invention, said to be described in a MS. by Leonardo da Vinci, and dated 1490, extant in the archives of the French Institute! Many other schemes are offered to, and some are under consideration of, the French Government. Besides those of our own countrymen already alluded to, we may add that a cannon of wrought-iron, or cast-steel, has been invented for field purposes, by Mr. Williams, the contractor for Government works at Milfordhaven, to be carried to the field in pieces, on men's shoulders, and put together in a few minutes, so as to be stronger than any gun cast or fabricated in one piece. In this way also, doubtless, any weight, as mere *vis inertia*, required for the recoil, could readily be applied.—— The electric telegraph cable to be laid in the Black Sea, between Varna and Balaklava, was made by Messrs. Newall, according to the *Gateshead Observer*, in a month's time, or 100 miles a month, and was to be dispatched on 14th inst. in a screw steamer built for the purpose, in about the same period of time!

INSTITUTION OF CIVIL ENGINEERS.

THE evenings of Dec. 12th and Jan. 9th, Mr. James Simpson, president, in the chair, were entirely devoted to the discussion of Mr. P. W. Barlow's paper, "On some peculiar Features of the Water-bearing Strata of the London Basin." It was contended, that the sands underlying the chalk would be found the most certain sources of water supply. The conditions of the strata at Grimsby were different from those of the London basin; and in the latter locality, some years ago, in any well of moderate depth, water was certainly met with, whereas at present it was only found at considerable depths, and was only obtainable by great pumping power. The water was now chiefly found in the fissures and flint beds, and but little in the solid chalk, beyond that held in suspension, and which it was difficult to extract. Water might be found in sufficient quantity, in the chalk, for the supply of two, or three, suburban parishes near the metropolis; but the conditions were very different from those of London itself; and it was strongly contended, that it was illusory to trust to any such source for a large supply by Artesian wells. It was admitted, that water was obtainable from chalk, chiefly, if not entirely, by infiltration through the fissures, and the layers of flints; and that although chalk was a rapid absorbent of moisture, it did not readily part with it again, nor in its normal condition would it afford a free passage for water, therefore it could not be correctly denominated a water-bearing stratum; whereas sand could be correctly so termed. The chalk was, however, in certain districts, so intersected by fissures, and had such numerous layers of flint, that practically the effect of a water-bearing stratum was obtained; and hence the excessive pumping from one well would affect all around, as also the sources of the streams. Sand was, on the contrary, essentially a water-bearing stratum; the facility of yielding moisture depending generally on the size, and therefore the collective compactness, or openness, of the grains. It was as susceptible of saturation as the chalk, but not as capable of retention of moisture. In some districts, the lower tertiary sands were mixed with clay, which interrupted the flow of water; whilst in others, they afforded a free passage. It was mentioned that the lower green sand stratum had been reached in the Hampstead well, at a depth of 1,150 feet from the surface, and a very short time would now demonstrate the correctness or the fallacy of the views, as to the quantity of water to be obtained from these strata. The wells under London did not now yield more than eight millions of gallons per day, and the water-level had been gradually sinking. In the year 1824 the water, when not affected by pumping, rose to within 10 feet of high-water mark, but now it did not reach to within 60 feet of the same level.

INSTITUTION OF CIVIL ENGINEERS OF IRELAND.

A GENERAL meeting of this institution was held in their rooms, Upper Sackville-street, on the 9th inst. Dr. Richard Griffith, in the chair, when Mr. Hemans, V.P. read a paper on the "River-walls and Flood-banks of the Upper Rhine."

He showed the means adopted by the Swiss engineers in controlling the course of that river, and preserving the country from the destructive effects of detritus suddenly brought down by the tributaries. Mr. Hemans exhibited plans of the embankments and other works designed by him for that portion of the line of railway under his superintendence between Lake Constance and Coire, and showed the reasons that induced him to adopt the form of embankment usual in railway practice in this country, in preference to that which had been adopted in river works in Switzerland. He also exhibited a spirit level section made by his assistants of the Lukmanir Pass over the Alps, with the proposed tunnel on the extension line from Coire to Milan and Genoa, and glanced at the geological nature of the range, and the expediency of working an incline with stationary engines in preference to tunnelling.

A discussion ensued, chiefly on the form and construction of embankments exposed to lateral currents, and the difficulty of constructing guiding-walls on shifting sands.

Miscellanea.

A PRIZE FOR ARCHITECTS.—I was once proud of my descent from "the proud Salopians," who formerly preferred their ancient abbacy to a new bishopric. Plentiful evidence still remains of their love of architecture: that evidence however, methinks, is in stone, and not in humanity, if the Bridgenorth authorities represent the latter. In your advertisements of last week, the directors of the Bridgenorth Public Buildings, &c appear desirous of receiving designs, &c. for public buildings, &c. &c. They offer 20*l.* and 10*l.* as baits; the first, however, to be disgorged if the (I was going to say) architect shall be hooked in for the erection. You would not credit such liberality if it were not rendered somewhat less profuse by the conclusion, that the particulars may be had for 5*s.* which, if there should be forty competitors, would eliminate the second premium. Your readers may be obtuse enough to imagine that because both the baits are to be furnished by the gudgeons themselves, therefore the small fry will not bite. Let us, however, watch these expert anglers.—F. R. I. B. A.

INCREASE OF BUILDINGS AT LIVERPOOL.—There were erected last year in Liverpool six warehouses and 829 houses. Of the houses 671 were under 25*l.* cent per annum.

HARWICH BURIAL-BOARD COMPETITION.—The burial-board of the parish of St. Nicholas, Harwich, met on Friday, the 5th instant, and after considering the designs sent in, determined upon those signed "Ad Rem cum Deo," which proved to be from Mr. C. H. Edwards, of London.

THE IRON TRADE.—We lately reported a nominal reduction of prices, agreed to—if we can say so—at the first of the quarterly meetings in Staffordshire,—bars to the extent of 30*s.* and other kinds, 20*s.* It has since been found that even these reductions will not tempt buyers, and at subsequent meetings of the ironmasters a nominal reduction of 40*s.* was resolved on by a large majority, while the remainder resolved not to abide by the *fiat* of the majority, but to insist on 20*s.* more. Nevertheless, it is reported that bars actually sold in the Hall on that occasion for 8*l.* 10*s.* It has heretofore been uniformly insisted that the urgent reducers of prices were "small" and "needy." In the present instance, the upholders of a mere 20*s.* reduction must be ultra-great and independent masters, for the small and needy now are the Thorneycrofts and many others of a similar class of manufacturers. The pig-makers have met, and have *resolved* that a reduction of 20 per cent.—some said 50 per cent.—in the make of pigs per week *should* be effected. It will be a new feature in the trade, however, if such a resolution be carried out into practice. In fact, the real meaning of each resolver no doubt is, that every *other* ought to reduce his make to the requisite extent. There is still no improvement in the American trade. On the contrary, our republican brethren talk of grand prospects of holding out the *iron* hand of fellowship to that *other* country of slaves and despots, Russia, which they are hoping to supply with iron themselves, and so to "cut us off" from all future ferruginous prospects in that quarter of the globe. Does it become those "Sons of Freedom," the Americans, to make common cause with the Russians in a struggle such as *this* is?

A WELL-SINKER BURIED ALIVE.—At St. Vigor-le-Grand, near Bayeaux, a well-sinker was lately buried in the midst of earth and woodwork, and although, after great and dangerous excavations, the poor fellow was reached, and even a rope put round his body, it was found impossible to draw him out without farther operations, which would incur the utmost hazard of not only burying him again, but those employed in extricating him. The Minister of the Interior had been communicated with, according to recent accounts in *Galignani*, and a priest had descended after four days, and given the man absolution in the midst of his fearful peril. We have since learnt that the poor fellow died in the well.

SCHOOL OF ART, TRURO.—A School of Art has been established at Truro, and it bids fair to be of service. The people seem anxious to gain a knowledge of drawing. Classes have been opened for the working classes in mechanical, perspective, geometrical, and free-hand drawing. Mr. G. R. Gill is the master of the school.

THE SCOTTISH AGRICULTURAL DWELLINGS IMPROVEMENT ASSOCIATION.—The first annual meeting of this association was held at No. 52, George-street, Edinburgh, last week, when many noblemen and gentlemen interested in agriculture were present and took part in the proceedings. The Duke of Buccleuch presided. The report, which congratulated the members on the progress made in the organization and objects of the association, was read and adopted. Lord Panmure moved a resolution, which was also passed, expressive of satisfaction with the progress already made, and a hope that still further success awaited their endeavours. The association have made arrangements for the collection and exhibition of cottage plans and specifications, some of which have been prepared by their architect, and some contributed towards the collection by other architects. Efforts are also being made to excite a general interest throughout Scotland in the improvement of hinds' dwellings.

SOMERSETSHIRE ARCHÆOLOGICAL SOCIETY.—The *conversazione* for January was held at the Museum, Taunton, on 8th instant, as appears from a report in the *Taunton Courier*. The chair was taken by Mr. W. E. Surtees, and Mr. E. Batten, of Lincoln's-inn, delivered a paper on the life of the monk Bacon, the enthusiastic and gentle scholar of the thirteenth century. After a tea interval, Mr. W. Metford, M.D. gave a paper on the "Luminosity of the Ocean." Drawings were exhibited by Dr. Kelly to illustrate the lecture. The Rev. Frank Warre read a paper prepared by the Rev. Mr. Scarth, of Bath, on stone and lead coffins, inscriptions, and other Roman remains, found at Bathwick, Combe Down, &c. Mr. C. E. Giles concluded, by submitting for inspection, three cartoons designed by Mr. Bell, of Bristol, for a triple light window, to be placed in the church at Aller, and representing, amongst two other subjects, the baptism of King Gudrum, after his defeat by the great Alfred. A drawing of the font, still extant, has been made by Mr. A. Clarke, to illustrate a paper to be read before the Society of Antiquaries, by the Rev. Thomas Hugo, of Taunton, M.A.

PROPOSED NEW DOCKS.—Amongst the works contemplated at the east end of the metropolis we hear is a scheme for constructing large docks at Dagenham, near Romford

GAS PROFITS: MANAGEMENT IN MANCHESTER.—According to a statement lately made by the chairman of the gas committee in the Manchester Town Council, the gas works first established at Manchester in 1817, have had to undergo alteration within the last ten years almost amounting to a total reconstruction. Up to 1824 the works were alleged to have cost about 40,000*l.* The cost to the present time exceeds 400,000*l.* The total length of mains is estimated at between 170 and 180 miles, and the number of meters fixed about 19,000. The increase of business last year over the previous one was about 10 per cent. and it goes on at an increasing ratio. The present production of gas in the works is, in round numbers, 600,000,000 feet, and the capacity of the ground now gradually filling with apparatus, will enable the corporation to produce 1,200,000,000 cubic feet per annum. The price of gas to consumers is on a graduated scale of 4s. to 5s. per thousand feet. Out of the profits of these works the committee are able to pay over for public purposes between 35,000*l.* and 40,000*l.* per annum; one-half of which sum goes to the making of public improvements in the city, and the other half to diminish the water-rate to the inhabitants. Nevertheless, attempts were some time since made, we remember, to deceive the Manchester gas consumers into the idea that it would be much better for them to be supplied by a self-seeking gas company. How the idea was worked out, it is not worth while to renote. In reference to gas profits, however, there is another point to which it may be more worth while to allude.

WANT OF EMPLOYMENT AT NEW YORK.—The *New York Herald* reports the existence of great distress among the working classes of New York. No less than 17,000 working people of all classes, it states, are out of employment, and without any actual prospect of work. Wages, too, are, of course, falling. Soup kitchens and provision depôts are being got up by the charitably disposed. The surplus labour in the city of New York, however, has the immense advantage of a wide and open country, through which it can soon be dispersed. Let them hive, like bees, under the leadership of some wealthy capitalist. In employing such a surplus for the clearance of backwoods and the foundation of towns, cutting out of railways, &c. both capitalist and operative might be speedily benefited. American workmen can "turn their hand" to anything, at a pinch. Had we backwoods in Britain, what a blessing they would sometimes be to starving multitudes!

IMPROVED MOTIVE POWER IN AMERICA.—For some months a series of scientific experiments have been made by Mr E. K. Collins, with what is known as Wethered's patent, the object being to increase the power of steam without any increased expenditure for fuel. The patentees claim as new "the combining steam and superheated or surcharged steam for actuating engines, when generated, the elasticity increased and operated as set forth." The patent intends not steam simply surcharged with heat, but the use of a mixture of saturated and surcharged steam. By these means it is said a greater power can be derived with a certain quantity of fuel than from the use of saturated steam alone.

THE ISLINGTON POOR ESTABLISHMENT COMPETITION.—Many months ago the committee advertised for designs for a building, stating distinctly that no design would be received, or at least chosen, which would cost more than 4,000*l.* The case of Mr. Birch was discussed fully in your columns at the time, and certainly the ultimate rejection of that gentleman's claims was highly honourable to the committee. They then chose the design of Messrs Jones and Parker, and advertised in your columns that unsuccessful designs would be returned on application. After some time the committee discovered, I think by means of public tender, that Messrs Jones and Parker's design could not be executed for the sum named. It was therefore rejected. This was also a highly honourable proceeding. After this the committee seemed puzzled. It clearly became their duty either to adopt the design of another competitor or to institute another competition. The former proceedings of this committee had been so extremely straightforward, that I waited in full expectation that one of these two courses would be pursued, when to my great astonishment I observed in your journal that tenders have been received for a design by Mr F Tyerman, the lowest tender being 8,669*l.* It is right to state that this includes fittings and drainage, neither of which were required originally by the committee. These two items would certainly not exceed 2,000*l.* There is therefore left 6,669*l.* for the cost of the building instead of 4,000*l.* Even supposing that Mr Tyerman's design could have been executed for the money, is it not a breach of faith towards all the competitors to appoint as their architect a perfect stranger, simply on account of their incapacity of judging of the cost of the other designs?

A. B.

DRAINAGE SCHEME.—A scheme for the drainage of towns by means of receptacles formed at intervals, in connection with the common sewers as they ordinarily exist, and into which the sewage matter was to be diverted, and where it was to be separated into dry, inodorous manure or British Guano, and clear liquid manure, both of them to be distributed where required, was, it may be recollected, published in our 9th volume, page 637, together with illustrative diagrams. A scheme, precisely the same, has recently been published, in the form of a pamphlet, by Mr. Weale, of High Holborn, but without the author's name. It is titled, "A Scheme for the effectual Drainage of Towns; with Projects of important national Measures which may be engrafted upon it." These measures are, the ventilation of sewers, as suggested long since by the *Builder*, the employment of convicts in the preparation of the manures, and, finally, the erection of extensive "model lodging-houses" around the ventilating shafts, and right above the manure depôts. Whether the pamphlet is by the author of the article in our pages, the Hon. and Rev. A. H. Gore, or has been plagiarised by some other writer, does not appear.

SURVEYORS' RESPONSIBILITIES: DILAPIDATIONS.—In the case of *Jenkins* v. *Beetham*, tried at Lincoln, when a verdict was given for the defendants, Mr. Macaulay, Q.C. moved, some time ago, in the Common Pleas, at Westminster, for a rule to set aside that verdict, and for a new trial, on the ground that the verdict was against evidence. The plaintiff was a clergyman recently appointed to a living in Lincolnshire, and the defendants were surveyors employed by him to estimate the value of the dilapidations to which he was entitled on entering on his parsonage-house. The defendants estimated the value of the dilapidations at 18*l.* as the amount requisite to make the house watertight. But they were bound to survey on the principle of the sum required to put the house in substantial repair, and it was proved that it would take 109*l.* to do this. The learned judge had directed the jury that, if the defendants brought to the performance of the duty they had undertaken the ordinary skill of country surveyors, they were not liable, as they were not to be assumed to be lawyers enough to know the principle on which the survey was to be made. They had, however, been recommended as the chief ecclesiastical surveyors in Lincoln, and accustomed to this kind of survey. Rule *nisi* was granted, but we are not aware of the result

BUILDINGS BY WHOLESALE.—I think that any one who reads the newspapers at the present time cannot have failed to notice the extraordinary celerity with which the wooden houses intended for our army in the Crimea have been prepared, packed up, and despatched for their destination. Now, for the future, might not the same plan be adopted for all wooden outhouses, barns, and sheds in our English farm-yards. Imagine the saving of time, trouble, and expense, if such sheds, instead of being sawn out by our village carpenters, were, on the measurements, &c. being given, at once sawn out and sent away with all the despatch that one of our great saw-mills is capable of. Again, for ordinary houses all the woodwork might be prepared in this way, the stone, bricks, and rough materials being furnished on the spot. Of course this plan would be applicable in especial to all emigrants, who, instead of setting out for a country where, on first landing, they would be houseless and homeless, would (I will not say like snails) carry their houses with them.—AGRICOLA.

WESTMINSTER ACT FOR IMPROVING THE DWELLINGS OF THE POOR. It having been represented that the Westminster Act offers the long desired facilities for the establishment of local societies for the improvement of dwellings with the utmost privileges, involving exemption from personal liability, beyond the amount subscribed, the *Labourer's Friend* has printed the first clauses of the Act for the information of its readers.

HOW TO SUCK BRAINS CHEAP.—Mr. Builder, —When I com'd for Surinam at efter I'd bin dun by brother Matty, I gat a lift to t'united States, but I nowt but bided there a bit, for I fun out they were ower cute for a chap like I, so I comed hoam agin, as I couldn't exactly fashion to tak to thear waays, and I bethowt me twor better to try and get on in towd way at walling, or clois yat hinging or owt els at wad pay. Well, tother day, I wor reading of yawr paper, and I seed an advertisment to artcheticts at baits owt for impudence at I iover seed i Kentucky. It wor an offer o' 20 pun fort best plans for a beeldin, and they as gees em is to do't work, but 20 pun is to go with it commission, so they has ony getten 10 pun to pay. As all they as tries for it mun pay 5 shillins, just reckonin the usual number as maks such fools of theirsels aboon 40, they gets prise for nowt, and as oftentimes there be more, they get what it pay for t'advertisements and all. This wad shame t'Americans, howsomever cute.

SAM SHARPSET.

WILL THE PUBLIC LEARN? — Your able correspondent, Mr. Tarbuck, in his articles on "The present Position of Architecture," has, in my humble judgment, borne a little too hard on the public, while pointing out the incontrovertible fact that "styles are now *adopted* instead of generated;" unless, indeed, he would wish to prove that professors and teachers are useless, and that all true genius issues from "the people," without direction—without teaching. And yet the articles are themselves a proof that we have teachers, both of art and architecture, and that they are required; that there are "men who evidently think for themselves;" and that there are men who give their free opinions on the exploded notion, that "true principles of architectural proportion, are *only* found in pointed edifices," or any other style. Let me entreat him, then, and all the other men of his noble calling, not to forget that to the professors of a science, *we* look for a sufficient amount of disinterestedness to teach us that which they believe to be true, even if their "very existence is dependent on the favour of their clients." The public will appreciate genius when it appears in the architectural form, for then it is sensibly brought before them.—ONE WHO ACKNOWLEDGES THE "BUILDER" TO BE A TEACHER.

REPAIRING METAL TOOLS.—A case is reported in the *Birmingham Journal* as lately occurring at the County Court there, in which plaintiff was a vice-maker, and defendant a lock-maker. The action was to recover 16s. Defendant, a Mr. Smith, required a shop-vice to be repaired, to be "steeled" on both its sides, and sent it to Mr. Massey, the plaintiff, for the purpose. Only one side had been steeled, and the article was sent to Hill's, in Digbeth, where it was properly done, and defendant had paid Mr Hill for it. Plaintiff laid the blame upon one of his men. Verdict for defendant.

BATH SCHOOL OF ART.—On 2nd inst. the general committee of this recently established school met and received a report from the executive committee, on the objects, position, and operations of the school. An exhibition of drawings from Gore House, including even a few from the Bath School itself, has been lately held in this city, for the promotion of an interest in art amongst its inhabitants.

EFFECT OF A LITTLE ORDER AT LONDON-BRIDGE.—The usual confusion and obstruction at London-bridge have been greatly lessened simply by regulating the traffic so that waggons and all slow-going vehicles are made to keep close to the side-walks, while the central roadway is appropriated to the fast traffic alone.

IRONWORKS IN SUSSEX.—In reply to an inquirer, we believe it will be found that up to as late as 1720 Sussex was the principal seat of the iron manufactory in England; but as the woods failed in providing fuel, the manufacture was removed to the coal districts. There was a furnace alight there, however, as late as 1827.

MEASURE OF STONE.—In reply to your correspondent's query as to "the quantity in cubic feet that constitutes a *perch* of stone, a common term in the western counties," I beg to inform him that a perch of walling is generally considered in this neighbourhood (Torquay) to be 16½ superficial feet, 20 inches thick, which is 27 feet 6 inches cube. Beyond 20 inches in thickness, unless by special agreement, it is calculated as a wall and a half or two walls, according to the extra thickness, and so on. It is not uncommon to *define* what shall *constitute* a perch of walling in the specification of work.

EDWARD APPLETON.

TENDERS

For pulling down and rebuilding the Museum Tavern, Russell street, Bloomsbury. Mr. Wm. Finch Hill, architect:—

Soward	£2,589	0	0
Patrick and Son	2,574	0	0
Holland	2,500	0	0
Johnson	2,437	0	0
Elston (accepted)	2,398	0	0

TO CORRESPONDENTS.

"*A Material Wanted.*"—Can you or any of your readers help me to a material for working the cornice and enriched mouldings of a shop-front, combining the following virtues. Shall be pronounced fire-proof by district-surveyor, easily worked, and very light; compo inadmissible; the entablature worked in slate, probably with a bearing of about 9 feet 6 inches?—S. G. O.

"*Red Bricks.*" Can any of your correspondents give any information as to where the red brick rubbers, used in the gauged arches and moulded work of the buildings in London, built in the time of Queen Anne and George I came from, and of what kind of clay they were made?—UBSHURST STOCK.

"A Clerk of Works," "J. W. B" "E. M." Bd. (some of the back numbers will be found at the office), "J. M." (answered, January 8th), "Palladio," "S. F." "W. E. M." (send us particulars), "H. F." "R. D. C" "Rev. J. G" "E. C. R." "C. B. N." "W. B. Salisbury." "F. W." "J. P." "T. O" "D. B." "A. S. G." will be made use of). "J. N." "J. R" "M. L" (we believe it was in the *Daily News*), "J. and J. H." "A Northern Subscriber." "Pro *Rata*." "Re Noxious Trades." "A Subscriber." "T. B." "W. G."

"*Books and Addresses*"—We are forced to decline pointing out books or finding addresses.

ADVERTISEMENTS.

ARCHITECTURAL and ENGINEERING PUPIL.—An Architect and Engineer, practising, and holding the appointment of Town Surveyor in a fashionable watering place, has a VACANCY for an articled PUPIL. Address, DELTA 12, Wellington-terrace, Bayswater-road, Kensington.

A BUILDING or MEASURING SURVEYOR requires a PUPIL, either IN-DOOR or OUT-DOOR.—Address A. B. Mr. Charles Poland's, 72, Margaret street, Cavendish-square.

AN ARCHITECT in London has a VACANCY for an additional ASSISTANT as an improver. Salary dependent upon present ability.—Address, X. Y. Z. care of Mr. Crocker, 26, Buckingham-street, Strand.

TO PARENTS AND GUARDIANS

AN ARCHITECTURAL FIRM, in the west end of London, having several important public and private works in hand have a VACANCY for an ARTICLED PUPIL. One of the firm being an artist, a peculiarly eligible opportunity presents itself for any youth having a taste for drawing, and who may be desirous of perfecting himself in that particular branch, combined with a thorough practical knowledge of architectural landscape gardening and ornamental arrangement of estates for building purposes. Reference given to works in course of erection, and a liberal premium required.—Address to A. B care of N. Webnert, Esq. Solicitor, 4, Bernard street, Russell-square, London

A CLERK REQUIRED in the OFFICE of a BUILDER in London. None need apply who have not been accustomed to take out quantities and make estimates; or who are not thoroughly conversant with builders' accounts, and the general duties of the office.—Address, C. Office of "The Builder."

MANAGER.—WANTED, an active Young Man, to take the management of a large saw-mill. None need apply but those who are accustomed to the control of men, and prepared to work with energy and perseverance. Address, O. H. D. care of W. H. Miller, Stationer, 6, Bridge-road, Lambeth.

QUANTITY CLERK WANTED, for a short measurement, to enter Engineering and Architectural quantities, and bring the same into bill. Must be able to produce satisfactory testimonials of accuracy and expedition.—Address, stating terms, to C. D Office of "The Builder."

THE SURVEYOR of a large and flourishing town in Lancashire desires to receive into his Office a Young Man who has had two or three years' experience in Surveying, Levelling, &c as an IMPROVER. There is constant practice in all the branches of an Engineer's and Surveyor's office, especially of sanitary and improvement works.—Address, with reference, stating experience, terms, &c. to B. B. Office of "The Builder."

TO ARCHITECTURAL STUDENTS AND OTHERS.

WANTED, an IMPROVING CLERK, at a progressive salary.—Specimens of drawing and terms to be sent to Mr FOWLER, 7 Garden court, Temple

TO ARCHITECTS' ASSISTANTS.

WANTED, by an Architect, in the course of a month from date hereof, an ASSISTANT, capable of designing and making finished and detail drawing with neatness and accuracy, also possessing a knowledge of construction, colour, perspective, and the general routine of an architect's office.—Address, stating age, terms, and qualifications, to A. Z Post-office, Birmingham. Good references indispensable.—Jan. 1, 1856.

TO FOREMEN OF CARPENTERS.

WANTED, a FIRST-CLASS, out-of-town FOREMAN, to Superintend Works from home. He must be thoroughly acquainted with Gothic work, and have previously filled a similar situation. A Wesleyan will be preferred.—Address F. H. Post office Leicester.

TO MARBLE MASONS.

WANTED, a good MARBLE MASON, one who is a good letter cutter. A Wesleyan will be preferred.—Address O P Post office, Leicester.

TO SHOP FOREMEN.

WANTED, in a London house, an experienced SHOP FOREMAN.—Address, by letter, to A. Z 19, Tokenhouse-yard, City, stating age, salary required, and where last employed

WANTED to APPRENTICE a LAD, 14 years of age, to a CARPENTER and JOINER, for seven years. A premium will be given.—Address, post paid, to Mr. HARDY, 57, Holland-street, Southwark, Surrey.

TO PLUMBERS AND BUILDERS.

WANTED, by a Three-branch Hand, constant EMPLOYMENT.—Address to T. S. 16, Cravenbuildings, City-road.

TO SCULPTORS

WANTED, EMPLOYMENT, by a respectable Young Man, who is a good hand at draped figures. Objects to carve in foliage.—Address, stating particulars, J. S. 1, Glebe street, Longsight, Manchester.

TO ARCHITECTS, BUILDERS, AND ENGINEERS.

WANTED, an ENGAGEMENT as BOOK-KEEPER and DRAUGHTSMAN, by a married man, 35 years of age, who can be well recommended from a similar engagement, and who is well acquainted with landscape, as well as mechanical and architectural drawing.—Address, A. Z care of Mr. H. Penney, Printer, &c. Darlington.

TO BUILDERS, CARPENTERS, &c.

WANTED to APPRENTICE a Youth, 15 years of age to the above, where he will have a good opportunity of learning his business. A small premium will be given. Address, with particulars, to H SPARROW, 34, Newington-causeway.

TO ARCHITECTS.

WANTED, an ENGAGEMENT in Town, by an experienced ASSISTANT, of business habits, and generally well qualified in the profession. Address A. M. care of Messrs. W. and C. PUGH, Blackman-street, Southwark.

TO ARCHITECTS, ENGINEERS, &c.

WANTED, by a Young Man, who is quite used to Mechanical and Architectural Drawing, an immediate RE-ENGAGEMENT.—Apply to Mr. EVERETT, Estate Agent, 31 Kingsstreet, Cheapside

WANTED, the MANAGEMENT or FOREMANSHIP of a CEMENT MANUFACTORY. The advertiser is temperate and of business habits, who has a thorough knowledge, with a practice of fourteen years in the manufacturing of patent Portland, Roman, Keen's, and Martin's cements; in the laying out of works, and in construction of machinery of a new and cheap description, invented by the advertiser, whereby 50 per cent will be saved in the manufacturing the Portland cement over the old system, with all defects at present in the material remedied.—Direct, freepaid, S. J. NICOL, 37, St. Anne-street, Liverpool.

TO BUILDERS

WANTED, a RE-ENGAGEMENT, by a steady, respectable Young Man; he is a good plain draughtsman, with some knowledge of taking out quantities; understands timekeeping, and the routine of a builder's office; is a Carpenter by trade, aged 26; country not objected to; can be well recommended by his last employer.—Address, G. P. 10, St. Andrew's-terrace, Rhodewell-road, Limehouse London.

TO BUILDERS, PLUMBERS, &c.

WANTED, by a Young Man, a SITUATION as PLUMBER or THREE-BRANCH HAND, who thoroughly understands his business. A good reference can be given.—Apply, prepaid, to T. R. 14, Alfred place, Bedford square, London.

TO CARPENTERS AND BUILDERS.

WANTED, by a Young Man, a Carpenter, IMPROVEMENT as a JOINER.—Apply, by letter, to A. Z. 13, Crosier-street, Palace-road, Lambeth.

WANTED, by a Practical Man, a SITUATION, as an outdoor FOREMAN, or Clerk of Works. The highest reference can be given.—Address, J. S. No 2, New Millman street, Guildford-street.

TO BUILDERS AND CONTRACTORS.

WANTED, by a Young Man, aged 24, a RE-ENGAGEMENT as CLERK in a Builder's Office. He is thoroughly acquainted with the same.—Address by letter, prepaid, to W. G. 4, James-place, Bath-street, City-road

TO MARINE ENGINEERS

WANTED, to APPRENTICE a respectable, well-located YOUTH, aged 15, in-doors. The country would be preferred. Also a member of the congregational body. Reference as to respectability required and given.—Address, W. F. No. 8, Quarry-street, Guildford.

TO BUILDERS AND PAINTERS.

WANTED, by a Young Man, who has served his time, constant WORK as PAINTER and GLAZIER; can hang paper, if required. Wages, 24s per week. Will agree for a term, if required.—Address, X. X. 1, Springstreet, Baker-street, Portman-square

TO BUILDERS, DECORATORS, PAINTERS, GLAZIERS, &c.

WANTED, by a Person who thoroughly understands his business (with measuring and bookkeeping), a SITUATION as FOREMAN, or to take the management of a business, having filled a similar situation for the last fifteen years. Satisfactory references can be given. No objection to the country.—Address, W. H Office of "The Builder."

TO CIVIL ENGINEERS, ARCHITECTS, SURVEYORS, &c

WANTED, by the Advertiser, an ENGAGEMENT as ASSISTANT to the above. He understands railway surveying and levelling, preparing plans, sections, &c measuring artificers' work, taking out quantities, &c. and has had several years' practical experience in the build ng department. No objection to going on the continent. Unexceptionable references and a testimonial can be given.—Address (stating salary offered) to F. H. C. Post-office, 7, Hemingford-road, Barnsbury, Islington.

TO BUILDERS AND HOUSE AGENTS.

WANTED, by a Young Man, a permanent SITUATION as PLUMBER, PAINTER, GLAZIER, and also understands paperhanging.—Address, C. D. 26, Brunsplace, City-road

THE Advertiser wishes for a RE-ENGAGEMENT as Clerk of Works or General Foreman.—Address A. Z. Mr. Braden's, Post-office, White Lion street, Islington, to be left till called for.

TO ARCHITECTS

THE Advertiser, who is in his 22nd year, wishes for an ENGAGEMENT. As the opportunity of improvement is the chief object, a small salary only would be required. —Address, A. W. 5, Conduit-street, Regent-street.

TO LIME, TILE, AND BRICK MERCHANTS, &c.

THE Advertiser, a Person of high respectability, having been established many years in the above trades, on his own account, and having a good connexion amongst builders, wishes for EMPLOYMENT. He is perfectly competent to conduct business, and to keep the accounts by double or single entry. Satisfactory references as to ability and integrity can be given.—Address, paid, to H. T. Loveland's Library, Essex-street, Islington.

TO BUILDERS AND CONTRACTORS.

THE Advertiser, an active Young Man, 20 years of age, Paviour and Mason by trade, is open for an ENGAGEMENT, by piece or otherwise. He is a thorough master of his business, both theoretically and practically, no matter how much or small the work, from the paving required on the embankments of water-works to fork and carriage way, brick and clinker, herring-bone, and encaustic tile paving.—Unexceptionable reference as to character and ability. No objection to the country. Address, T. C. No 3, Brunton's place, Commercial-road, Ratcliff

THE Advertiser, who is a good Draughtsman, and accustomed to Working Drawings of all kinds, is desirous of an ENGAGEMENT in an Office, or to superintend Buildings as Clerk of Works to which capacity he has had some experience.—Address, A. R. Z. 7, Upper-Park-street, Greenwich.

TO BUILDERS.

OCCASIONAL ASSISTANCE OFFERED. WANTED, an ENGAGEMENT for TWO or THREE DAYS a WEEK, in Estimating, Measuring, Bookkeeping, and Pricing and Making out Accounts, upon reasonable terms.—Address A B 2, Triangle, Upper Kennington lane, Lambeth.

CLERK.—WANTED, by a Young Man, age 23, a SITUATION in a Builder's Office. He has a knowledge of accounts, and is a good practical joiner. Salary secondary consideration.—Address, A. B. Office of "The Builder."

TO ARCHITECTS, CIVIL ENGINEERS, AND OTHERS.

AN Architectural Draughtsman, aged 22, desires a RE-ENGAGEMENT. He is well versed in mathematics, and is conversant with levelling, surveying, planning, mapping, and taking out quantities. Salary very moderate. Address, X Y. Mr. Lowe's, Law Stationer, Bell-yard, Temple-bar.

TO ARCHITECTS, CIVIL ENGINEERS, &c.

A CLERK of WORKS having just completed some extensive works in the country (under the directions of the architect, and where no builder was employed), is desirous of an ENGAGEMENT. The advertiser can make fair and working drawings, take out quantities, measure up works, &c. First-rate references.—Address, R. G. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, AND LAND AGENTS.

A GENERAL ASSISTANT is open to an ENGAGEMENT.—Address, GAMMA, Office of "The Builder."

TO ARCHITECTS.

A YOUNG MAN, who has served five years to an architect of extensive practice, and who is just completing a twelvemonth's tour on the Continent, amongst the best specimens of the art, is open to an ENGAGEMENT.—Address, JAMES RADFORD, Solicitor, Newcastle-upon-Tyne.

TO BUILDERS

A YOUNG MAN, of business habits, will be shortly disengaged. He is a good draughtsman and Designer and has had considerable experience in superintending the erection of buildings, taking out quantities, measuring up work, keeping books, and looking after workmen. Practically acquainted with Carpentry and Bricklaying. References to present and previous employers.—Address to B. G. G Mr. F. W. Dunn's, Bookseller, 85, Pilgrim street, Newcastle on Tyne

A GOOD DRAUGHTSMAN, who is acquainted with perspective, and the usual duties of an architect's office, is desirous of an ENGAGEMENT. A moderate salary required.—Address, A. O. Z. Gresham Library, Cheapside.

TO ARCHITECTS, &c.

AN Artistic Colourist, Draughtsman, and Designer, offers his services in the preparation of Perspective Views, with landscape and figures, also in general drawing, on moderate terms.—Address, A. Z. 61, Denbigh-street, Belgravia.

TO BUILDERS AND CONTRACTORS.

A PRACTICAL and well-qualified Man wishes for a RE ENGAGEMENT as AGENT or GENERAL FOREMAN. Unexceptionable references can be given.—Address D. W 19, Weston-place, Long-lane, Bermondsey.

TO ARCHITECTS AND SURVEYORS

A YOUTH, aged 17, who has assisted a Surveyor, wishes to enter an Office of either of the above. He has been accustomed to square dimensions, check abstracts, copy bills and drawings, &c. No premium will be paid. Address, S. B. M. Office of "The Builder."

TO ARCHITECTS AND OTHERS.

A GENTLEMAN, who has been in the above profession about sixteen years, and who is now thirty-nine years of age, is desirous of obtaining a SITUATION, either to conduct the Management of a Surveyor and Architect's Office, to Manage the Estate of a Nobleman or Gentleman, or to be Surveyor to any Institution or Corporation. The Advertiser has carried on his profession in the City of London, and can give first-rate references and testimonials as to sobriety and integrity, and to many large jobs and numerous estates upon which he is and has been professionally engaged.—Address Z. N. 73, Newgate-street, City.

A CLERK of WORKS, about finishing a large public job in the neighbourhood of Oxford, is open to an ENGAGEMENT, either in the Gothic or general building line.—Address, J. G. High-street, St. Clement's, Oxford.

A THOROUGHLY practical Man, of business habits, wants a SITUATION as FOREMAN of PLASTERERS in a builder's firm; is accustomed to the general discipline amongst workmen. References can be given. No objection to town or country.—Address, G. P. 29, Upper Seymour-street, Euston-square, London.

TO ARCHITECTS.

A YOUNG ARCHITECT is desirous of an ENGAGEMENT; a good draughtsman; understands surveying and levelling; no objection to the country.—Address, A. B. 38, Blackman-street, Borough.

TO ENGINEERS, IRONFOUNDERS, CONTRACTORS, AND OTHERS.

A RESPECTABLE MAN, aged 36 years, well versed in accounts, men's time, abstracting, prime cost, material, &c. wishes a RE-ENGAGEMENT, as Clerk, Collector, or Traveller, in either of the above capacities. References of the highest order.—Address, A. B. U. care of Mr. Seabrook, Office, No. 3, Camden-terrace, Peckham-road, Peckham.

LONDON NEW CATTLE-MARKET.—The AGRICULTURAL GAZETTE and GARDENERS' CHRONICLE of this day, January the 5th, will contain a full description of the NEW CATTLE-MARKET, together with an Engraving exhibiting in perspective the general arrangements of the parts. It may be ordered of all News agents, or a single copy will be sent by post on receipt of six postage stamps.—Office for Advertisements, 5, Upper Wellington-street, Covent-garden.

Office of Metropolitan Buildings, 6, Adelphi-terrace, Strand,
January 3, 1856.

METROPOLITAN BUILDINGS ACT.

NOTICE An EXAMINATION of PERSONS desirous to obtain a certificate of qualification for the office of DISTRICT SURVEYOR, will take place on MONDAY, the 28th day of JANUARY instant, at ONE o'clock p.m. Persons desirous to be examined, must apply on or before the 27th instant, and the application must be accompanied by a preliminary statement, according to the course of examination prescribed in the rules for that purpose, copies of which may be had at this Office

(Signed) ARTHUR SYMONDS, Registrar of Metropolitan Buildings.

THE CONSERVATIVE LAND SOCIETY.

The OLD FORD ESTATE, in the parish of St. Mary, STRATFORD LE-BOW, Middlesex, within the borough of the Tower Hamlets, will be ALLOTTED at the Office, No. 33, Norfolk-street, Strand, on WEDNESDAY next, the 24th of JANUARY.—The land is divided into one plot of 1000l.; four of 150l. each; one of 200l.; three of 100l. each; three of 90l. each; fifteen of 75l. each; and one hundred and sixty plots of 50l. each.

CHARLES LEWIS GRUNDISEN, Secretary.

BUILDING ACCOUNTS, Measurements, Dilapidation Surveys, Quantities, Land Surveys, &c. Architects, Builders, or Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find prompt and undeviating attention to any business of this nature, combined with a scale of moderate charges, on application to MR. A. ANDERSON, Offices, 69, St. Martin's-lane, and Acton hill.

IMPORTANT NOTICE to ARCHITECTS, BUILDERS, and OTHERS.—CHARLES NOSOTTI, Looking-glass Manufacturer, Interior Decorator, and General House Furnisher, begs most respectfully to inform the above, that, from the extent of his trade, he is enabled to offer pecuniary advantages both in quality and price. Designs made or carried out to any extent. An extensive assortment always on hand. Estimates free of charge.—Plate-glass for glazing purposes, at 338 and 399, Oxford-street.

TO SAW-MILL PROPRIETORS, BUILDERS, &c.

ON SALE, a first-rate PLANING-MACHINE, with 18-inch rollers and the latest improvements. This machine will plane, thicknes and groove (simultaneously) boards at the rate of 50 feet per minute, up to 4 inches thick and 12 inches wide.—Apply to JNO. H. WALKER, Sawing and Planing Mills, Huddersfield.

FOR SALE, in consequence of the brick-making being discontinued, IRON PLATES, PUG-MILLS, BARROWS, CHALK-MILL, &c. and the usual Brick-making Plant.—For particulars, enquire at the Office, Vorley's-villas, Junction-road, Holloway.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, have just ISSUED a PAMPHLET, descriptive of various Patented Inventions for the Permanent Way of Railway, which are adopted and are being applied to more than 3,000 miles of line. On application, a copy will be forwarded by post (gratis) to any parties who are interested in the construction of railways. WILLIAM HOWDEN, Sec.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge

PRIZE MEDAL, 1851.

SAMUEL CUNDY, PIMLICO MARBLE WORKS, Belgrave Wharf, Lower Belgrave-place, Pimlico. FONTS, PULPITS, SCREENS, &c

Burial Monuments, Memorials of economical or elaborate design. Particular Study devoted to Sculpture and Carving. (Vide the Mediæval Court, Crystal Palace, and other important works.)

The public are invited to inspect the Stock of CHEAP Chimney Pieces, manufactured by improved machinery.

Mediæval and Elizabethan Chimney Pieces, in Marble, Alabaster, and Cen-stone.

S. C. takes the opportunity of informing the public, that the same care is bestowed in the selection of the best material and manufacture for the lowest priced Chimney Pieces as for the highest.

Circulars sent on application.

The works are in a fine situation, and about a quarter of a mile (west) from Buckingham Palace.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally their extensive assortment of vein, Sicilian, and statuary marble in slab and block, at prices never before offered JAMES SIMMONS, Manager.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer a partner.

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention, at far less cost than by any other process, and can be supplied with Mantel and Slab Chimney pieces Slabs, &c. at the Marble and Stone Sawing mills, Cambridge heath Hackney. WM HUSTLER, Proprietor. Two Marble Masons wanted.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Burzilla, dove, black, blue and gold, brocatelle, and statuary, serpentine, red antique &c. Portland, Bramhill, Park spring, and other stone, in blocks, slabs landings, and hearthstones Yorkshire paving, scantle, &c. All goods carefully packed and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London

CAEN and AUBIGNY STONE.—P. POUCARD, Stone Merchant and Quarryman, Carges shipped to order from Caen to any port. Contracts taken for any quantities. Depôt, Granite Wharf, East Commercial-road, Lord's Waterloo-bridge. Offices: 240, High street, Southwark, near the Townhall

BANGOR WHARF, King's-road-bridge, Camden-town. S. RINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, plaster, Portland, and Roman Cements, Lime, Tiles, Decking and chalk lime, plasterers' hair, Yorkshire plain, pan and ridge tiles, glazed sewer pipes, chimney pots, red and white fire bricks, gravel and shells for garden paths, ballast, sand, &c Materials landed, wharfed, and carted.

GATES and GEORGE, GENERAL STONE MERCHANTS, Caen Wharf, Rotherhithe, beg to inform Building Manufacturers and Workmen, and Wholesale Dealers in Hearth- and Paver Stone, that they can be supplied in quantities from three tons and upwards with the above delivered at the South Eastern Railway Goods Depôt, Bricklayers' Arms Station, Old Kent-road, at the current prices. Terms samples, and other information may be obtained at the Office of the Wharf above.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above Stone, Portland, Bramley Fall, and other Yorkshire stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch, and on moderate charges.

THE CASTLE SLATE QUARRY.—NOTICE to the SHAREHOLDERS and the PUBLIC.—The 2,000 shares hitherto kept as a reserve fund, in consequence of the great extension of the present workings, and the opening of the new quarry, will not be issued at 11 per share to the original shareholders, and at the present market price of 14 to the public. Applications may be made immediately to the Purser, G. HADLEY, Esq. at the Offices of the company, 8, Old Jewry, where every information respecting the present state of the quarry (dividends paid and shortly due, may be obtained. The shares now priced need will participate in the next half year's dividend after the payment of the one due, in December next.

By order of the Committee.

Jan. 4, 1855 GEORGE HADLEY, Purser

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOODLAND ROBARTS beg to the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the Lowest Prices. Bills of Quantities, Estimates, Ledgers, Steps, Landings, &c. cut on the shortest notice Country orders promptly attended to

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY PIECES. Nearly two of the above have been sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from £7 to £14 10s. each; with jambs, moulded with large open fire-grate, set in plinths, Mantel moulded with wide mantel shelf, and slabs with hollow on edge, to suit sitting-room patterns of more elaborate character. BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

UNDER HER MAJESTY'S ROYAL LETTERS PATENT. INDURATED STONE COMPANY, for INDURATING and RENDERING IMPERVIOUS STONE, BRICKS, TILES and other Building Materials Completely Registered, Dec. 23rd, 1854 This Company being now in a position either to execute orders or grant licenses, the Directors are desirous to call the attention of the public to the great importance of their valuable patent. Although any porous material can be hardened and rendered perfectly non-absorbent by the process adopted, it is especially applicable to the various sandstone and freestones which abound in this country. There are many localities where stone may be procured; but on account either to its very little texture or from its yielding rapidly to the action of the atmosphere, it is useless to incur the expense of quarrying. In such situations, the application of this patent process would be invaluable, as it would completely obviate the disadvantage above referred to, and render a material otherwise useless available for a variety of important uses in connection with building. In a national point of view, the process is also worthy of great consideration. The enormous outlay incurred in the cost and conveyance of granite and other hard stones for docks, sea-walls, bridges and similar works of magnitude might, in many instances be reduced 75 per cent. This is generally to be found, either on the sea-coast, or within a reasonable distance of it, which fronted under this patent, would be preferable to the costly stones above mentioned, as one of which will stand effectually between wind and water, owing either to their long course of exposure or from the presence of some mineral which becomes affected by the atmosphere, such as the felspar, in granite. For monumental purposes, the Indurated Stone has great advantages over the materials usually adopted. It is considerably cheaper even for the plainest kind of work; but for ornamental designs, it is pre-eminently so, and as it does not vegetate, and cannot decay, its importance in this particular is obvious. Its extraordinary induration for vaults and catacombs, such that is parallel to the beddings and adherence to the cross might be obviated as in such cases, it would act as a preservative, and not as in other instances, hasten decay. For all purposes where durability and impermeability are desirable, the Directors feel that this patent process must ultimately prevail With reference to the former, the Directors refer with satisfaction to the opinion of that eminent engineer, Mr. Stephenson, who has pronounced the Indurated Stone to be an indestructible rock, and as regards its impermeability, the simple test of allowing it to remain in water an length of time must convince of the most sceptical. The stone will bear a most brilliant polish thereby rendering it available for chimney pieces, and works of similar character. With a view to the development of the importance and usefulness of the Indurated Stone, the Directors are prepared to grant licences on very moderate terms. Applications to the Executive Offices, 14 and 15, St. Swithin's-lane, London, and at the Works, Tunbridge Wells. Applications for shares may be made to the 27th inst.

INDURATED STONE COMPANY.—Completely Registered. Dec 23rd, 1854 WANTED, as SECRETARY for the above Company, a gentleman of active habits and ability, thoroughly accustomed with book-keeping, and possessing a knowledge of architecture and matters connected with building generally Salary, £75 per annum Most satisfactory testimonials as to character and ability must be given, and security to the amount of £500, will be required. For further information, apply by letter (post-paid), to Mr N. E. STEVENS, Managing Director, High-street, Tunbridge Wells.

THE ALBERT ASSURANCE COMPANY, (Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests and on good personal security.—EASTERN BRANCH, 7, Finsbury-square. W. S. VARDY, Manager.

INSTITUTED 1831

SCOTTISH EQUITABLE MUTUAL LIFE ASSURANCE SOCIETY.

Incorporated by Royal Charters and Special Act of Parliament.

Head Office—EDINBURGH, 26 St Andrew-square.

LONDON, 126, Bishopsgate street, Cornhill

The SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY is an Institution peculiarly adapted to afford provision for Families It was established in the year 1831, upon the principle of MUTUAL CONTRIBUTION, the Surplus or Profit being wholly divisible among the Members; and the Additions which have been made to Policies at the Periodical Investigations of the Society afford satisfactory evidence of the prosperity of the Institution, and the great advantages derived by its Members. The following Examples exhibit the Additions already made:

A Policy for 1,000l. opened in 1839, is now increased to 1,523l. 8s.

A Policy for 1,000l. opened in 1836, is now increased to 1,431l. 16s. 10d.

A Policy for 1,000l. opened in 1840, is now increased to 1,310l. 19s. 7d.

The Profits are ascertained and divided triennially among Policies of more than five years' duration.

The Annual Revenue is upwards of 150,000l.

The Amount of Assurances in force is upwards of Four Millions and a Quarter Sterling.

The Amount paid to the Representatives of Deceased Members exceeds 600,000l. sterling

The Total Amount of Vested Additions allocated to Policies exceeds 600,000l.

The Accumulated Fund is upwards of 830,000l

Loans granted to Members to the extent of the Office value of their Policies.

Copies of the Annual Report, Forms of Proposal, and all information may be had on application at any of the Society's Offices in town or country.

ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.
W. COOK, Agent.

Bell Powell, M.P.C.S. & Principal of the Norwich Diocesan Normal School. The Lectures on Chemistry, Natural Philosophy, and Mechanics as usual, with the remarkable Scientific Novelty, lectured on by J. H. Pepper, Esq. of Professor Wheatstone's Experiments on the Transmission of Sound, illustrated by a Telephonic Concert. Entirely new and splendid Optical Diorama from the Arabian Nights, the Voyages of Sinbad the Sailor, with beautiful Phantasmagoria Effects. Views of the War. Perkins's Steam-gun, which now discharges 200 balls per minute.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material previously used, or from the use of a imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase l weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxide becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in Half-by Messrs. BLUNDELL SPENCE, and Co.; when ground and dry by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 69, King William-street, City; JACK and BRADY, Wholesale and Retail Agents, 8, Tottenham-court, New road and 50, Upper Thames-street, City. In Manchester and Liverpool by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting slates, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bonds. ZINC OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Dorchester, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars apply to the Company's General Agent in London, Mr. SCHMOLL, 13, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Boroughs rk, as their Painters, who will be ready to execute any description of Painting and Decorating with the Pure Patent White Zinc Paint.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for Internal Use, to be painted in a few hours and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Peel street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lime, Lathe, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, Patte Vases, Rolling, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of the reliable Cement, that they have, by means of a recent discovery (patented) by Mr. ASPDIN, much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rosher and Ward's, Hollis-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement, does not vegetate, turn green, or crack; combined with which, its enormous hydraulic properties stamp it at once as the first Cement of the day for works where all the above qualities are requisite. It is manufactured on the only genuine Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Old Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innocuous qualities, is peculiarly applicable to first-class Decorations and House Painting. For fresh it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

PORTLAND CEMENT.—D. MOUNTAGUE begs most respectfully to inform the numerous Architects, Contractors, Builders, &c. who have for the last thirty years patronised his Roman Cement, Plaster, and other manufactures that he is now enabled to supply them with a very superior Portland Cement, warranted to withstand the action of Lead Frost, &c. and of uniform colour and quality. Orders received at Foleon Cement Wharf, 80, Bankside, Southwark; Harrow-bridge Wharf, Stratford, Essex; and at the Cement Manufactory, Orchard House, Blackwall.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cement, with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime from this stone is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS, STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and Co. send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Maccles-field-street North, City road Basin. Second'd, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor, and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Teleries," Tunstall, Staffordshire, as the first of the kind in the world.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 33s.; Cowley Stocks 26s. at WARD'S OLD-ESTABLISHED HONDURAS WHARF, BANKSIDE, Lond n. Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods: Fire Bricks, Lumps, Tiles and Clays. Patent Maltings and Corn-drying perforated Tiles, real Dutch Clinkers, River sand, Concrete Gravel, Founders' Coke, White and Red Flue Sand, &c. &c. at the cheapest rate.—Chief Office, 27, Regent-street.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at R. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Pince, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; at a large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

BRICKS for OVEN-BUILDING, acknowledged the best for that purpose, delivered, 32s. to London-bridge or Newington; beyond that distance, moderate charge carriage. Bricks of all description; yellow and light stocks, equal to seconds. Red facings, at 30s.; grey field; red and glazed pipes, about half the price of stoneware; white sand, nearly silver, in field or by barge; founders' sand and loam; good coloured gravel.—Address, B. PARKS, Lewisham Brickfields.

GREAT NORTHERN WHARF, York-road, King's cross. WHITE BRICK and TILE DEPOT. L. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, beg to inform builders, contractors, and the building trade generally, that they have now on sale at the above wharf, Cowley stocks, grizzles, and place; white cutters, seconds and paviors; clinkers, red cutters, and stocks; plain and pan tiles, 6 in. 8 in. and 12 in.; white and red paving tiles; blue, red, and white ornamental tiles, blue and red ornamental ridges; Stourbridge, Welsh, and Yorkshire fire-bricks, lumps, tiles, and clay; ornamental and other wall copings; Bangor and other slates; stoneware sewer-pipes, bends, junctions, and syphons; closet-pans and traps, terra-cotta chimney tops, trusses, brackets, vases, mouldings, and patera of the most improved patterns. Architects' designs worked to with accuracy and despatch. Lump and ground grey stone lime, chalk lime for plastering, blue lias lump and ground lime, Roman, Portland, and lias cements, coarse and fine plaster, laths and hair.

N.B. 30,000 bundles of prime Gothenburg laths are now on sale at the above wharf, price 32s. per load.

GREAT NORTHERN RAILWAY.—L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross, beg to inform builders, contractors, and others who are engaged in works at or near any of the stations on the above line of railway, that they can be supplied upon the shortest notice with Bricks, Tiles, Lime, Cement, Sand, Plaster, Drain-pipes, Fire-goods, and all other building materials of the best quality at the lowest market prices.

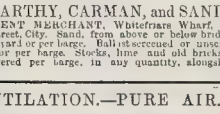
N.B. Orders received overnight can be delivered by the early morning trains.

BRICKS.—KENT GREY STOCKS on SALE. Also PATENT PERFORATED and SOLID WHITE SUFFOLK FACINGS.—Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newland-street, Newington-butts, will, from MONDAY, the 10th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE. Dec. 8, 1854.

BRICK-MAKING EXTRAORDINARY!!
BY OATES AND INGRAM'S PATENT MACHINE.
TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen by order only in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.



The great advantages possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be barked up in racks before leaving the machine, which is entirely self-acting, consequently requires only the labour of feeding and carrying off.

Applications, either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

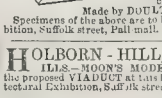
VENTILATION.—PURE AIR.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, a most important supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders &c

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTCLIFF'S PATENT WIND-GUARD. This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.



SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.) NOURSE and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

CHIMNEY CONSTRUCTION.

MOON'S CHIMNEY CONTRACTOR, REGISTER, and CHIMNEY BAR COMBINED. The contractor assists draught; the register admits of being partially or wholly closed; it is cleanly, simple in construction, and cannot get out of order.

Manufactured by PARRY, of 105, Golden-lane.

MOON'S DWARF-COVERED CHIMNEY-POTS, open on two sides, which affords an efficient outlet for the smoke, whilst the two enclosed sides and top form a guard from the wind. The pots being very distinct, prevent the flues admitting each other. The dwarf cover nearly conceals them from view, and thus avoids any disfigurement to the chimney-shafts

Made by DOULTON, of Lambeth.

Specimens of the above are to be seen at the Architectural Exhibition, Suffolk street, Pall-mall.

HOLBORN-HILL,—a REMEDY for its ILLS.—MOON'S MODEL of an amended DESIGN for the proposed VIADUCT at this locality, may be seen at the Architectural Exhibition, Suffolk street, Pall-mall.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GOSS'S WHOLESALE WAREHOUSE, 29, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PATENT SANITARY GAS SHADES.—These shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the offensive and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

FOWLER'S IMPROVED

WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope section, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to double 15-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY
Whitefriars-street, Fleet-street, London

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'
PATENT VIBRATING
STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 36 feet; also, Garden Engines constructed on the same principle.

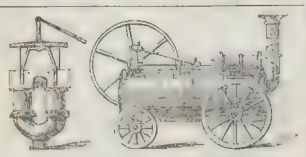
8, Crescent, Jewin-street, London,
Manufacturers and Patentees

M. A. RICHARDS and SON PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE



Pumps of any size, single or double barrel, up to double 12-in diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 9s. per doz. painted.
Ditto ..... 12s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side

STEAM PUMPING ENGINES.—

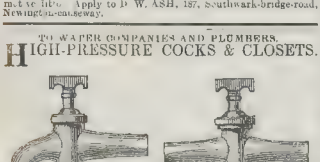
PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's place, Holland-street,
Southwark, London.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES,



mounted on strong wagon-wheels, iron chimney horse shafts complete. Steam sample for immediate use. Several are ready for delivery, from six-horse power to twenty-five horse power and upwards, adapted to contractors' work generally. May be hired as a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS', Engineers and Portable Engine Makers, 92, Blackfriars road. These engines have been successfully employed for years.

PUMPS.—TO BE SOLD, a Set of Three

Inch GUN-METAL PUMPS, with 100 feet of rising main, complete, with all the connecting rods, cranks, carriages, &c. nearly new. Also, an 8-horse Waggon Boiler, and a 5-horse Locomotive ditto. Apply to D. W. ASH, 187, Southwark-bridge-road, Newington-causeway.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high pressure principle in all towns, WARNER'S HIGH PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

JENNINGS'S PATENT DRAIN-PIPES.

ENGINEERS AND ARCHITECTS SPECIFYING THESE PIPES TO BE USED, will have the GREAT SATISFACTION of knowing that their DRAINS can at all times be EASILY EXAMINED, or BRANCH DRAINS INTRODUCED, by simply removing one of the plain Sad Ues, and substituting a Saddle piece, having a junction in it of the required size.

See THE PATENTEE'S VIPES COMPARISON OF HIS PIPE, WITH AND OTHERS BEFORE THE PUBLIC.

A list of Public Works, drained by these improved Pipes, with testimonials, will shortly appear.

JENNINGS'S PATENT CLOSETS, TRAPS, SLUICE-VALVES, &c.

ARE FREE FROM ALL COMPLICATION.

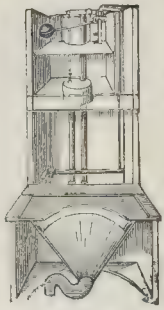
ANY NUMBER OF CLOSETS SUPPLIED FROM ONE SERVICE-PIPE, AND THEY ARE AS READILY FIXED AS A COCK TO A SINK, UNDER HIGH OR LOW PRESSURE.

Architects furnished with references of the highest order.

A Book containing Illustrations and Particulars of JENNINGS'S DRAIN PIPES, WATER-CLOSETS, URINALS, LAVATORIES, SLUICE-VALVES, FIRE-COCKS, GULLY-TRAPS, SHOP-SHUTTERS, HORSES, &c. &c. can be had free on application, or by post if two postage stamps are enclosed to

GEORGE JENNINGS, SANITARY ENGINEER,
29, Great Charlotte-street, Blackfriars-road.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.



Superior Glazed Stoneware Pipes, Bends Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Syphon Pan, water without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin, the most effective Syphon-trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS,

Oxford, November, 1849.

GENTLEMEN, Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1850.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

WATER POISONED BY LEADEN PIPES.

Section of a Piece of Lead Pipe taken up from a Well on the Grounds of Mr. Dick, of Bonchurch, Isle of Wight.

builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here."

From C. HACKER, Esq. Surveyor to HIS GRACE THE DUKE OF BEDFORD, Woburn Park.

Second Testimonial;

"GENTLEMEN,—In answer to your inquiries respecting the Gutta-Percha Tubing for pump suctions, I find that the water has not affected it in the least although it will eat lead through in two years; we have adopted it largely, being cheaper than lead, much easier bored, and a more perfect job."

DURABILITY of GUTTA-PERCHA TUBING.

Many inquiries having been made as to the durability of Gutta Percha Tubing, the GUTTA PERCHA COMPANY have much pleasure in giving publicity to the following letters from parties who have had it in use for a considerable length of time:—

From Sir RAYMOND JARVIS, Bart. Ventnor, Isle of Wight.

Second Testimonial

"In reply to your letter received this morning, respecting the Gutta-Percha Tubing for pump service, I can state, with much satisfaction, it answers perfectly. Many

THE GUTTA-PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY ROAD, LONDON.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior quality, truer in tune, and at less cost than has hereto been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turrets, Clocks, &c. cast to any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

WINDOW BLINDS.—TYLOR & PACE,

Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS which they can recommend as being made in the best manner. Venetian blinds, per square foot, best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 8d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc ditto, in ditto, 4s. 6d.; oriental blinds of striped cords, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Stamped Best-quality, Wholesale and Retail Pantry Builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road.

N.B.—The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.

January, 1850.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES.

FREEMAN ROE'S Patent Sluice-valves can be repaired without being removed from the main. All sizes, from 3 inch to 36 inch. Patent Hydrants, self-closing Cocks, Fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given, by FREEMAN ROE, Hydraulic and Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES,

BENDS, JUNCTIONS, and SYPHONS. They work well, be all to be the best manufacture, and are supplied of quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and Co. Great Northern wharf, York-road, King's-cross.

TO WATERWORKS COMPANIES AND OTHERS.

TO be SOLD by PRIVATE CONTRACT,

Forty-five 24-inch iron socket pipes, 9 feet long, and weighing 19 cwt. 3qrs. each; four 24-inch 3/8 bends, 13 cwt. 3 qrs. 23 lbs. each; fifteen 15-inch socket-pipes, 9 feet long, and weighing 9 cwt. 3 qrs. each.—For further particulars, apply to the Leicester Waterworks Company, or their Secretary, JOHN LOSEBY, Solicitor, Leicester.

DOULTON AND CO.'S
SINKS, URINALS, &c. IN PATENT GLAZED STONE WARE,
HIGH-STREET, LAMBETH, LONDON.

DOULTON and Co.'s Sinks and Urinals are manufactured in a new kind of Stone Ware, of high glaze, and uniform colour; they will withstand the action of the most powerful acids, and are made very strong to bear rough usage.

Fig. 1. Straight Sink, large size, 2 ft. 7 in. long, 2 ft. wide, 10 in. deep ..... 30s. each

WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap.

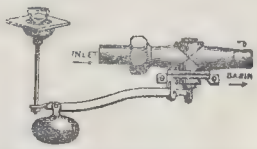
MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Paving Bricks, &c., &c. Agents,—CHARLES RICHARDSON, No 6, South Wharf, Paddington, London.

TO ARCHITECTS, SURVEYORS, BUILDERS, CONTRACTORS, AND OTHERS.

MESSRS. CHANY beg to call attention to their large Stock of Water-closets spring valve and common), Gimlet Hopper Basins, Traps, and all articles used in sanitary improvements.—N.B. Plumbers' Brass-work of every description 34, Clifton street, Finsbury square.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, ware, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Fish-street, near St. Paul's, London



HENRY TURNER, 2, SOUTH WHARF PADDINGTON,

5s. Traps, 2s 6d. 5s.

Manufacturer of Closet Basins and Traps, yellow outsides, with white insides. These are warranted to be the most durable earthenware now manufactured.—A list of shapes and prices sent free, on application. A large stock of Plug Basins of every variety

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 140 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New-Cut, Lambeth.

AGRICULTURAL LAND DRAIN-PIPES of all sizes, and in any quantities, may be obtained of L. B. PLARSE and CO. Great Northern Wharf, York-road, King's cross.

MILL-WALL POTTERY (near Scott Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application.

SALES BY AUCTION.

TO MARBLE MASONS, SCULPTORS, BUILDERS, AND OTHERS

MR. MARSH has received instructions to SELL by AUCTION on the PREMISES, No. 8, North Wharf, Paddington, on THURSDAY, JANUARY 26th, at TWELVE o'clock, the STOCK of MARBLE in the extensive Yard, Wood Bank, and Stables, forming from 2 of an inch to 4 inches in thickness. Approved bills will be taken—May be viewed the day prior and morning of sale; and catalogues may be had on the Premises, and at Mr. Marsh's Offices, 2, Clarence-row Mansion House.

RANELAGH Building Materials.

MR. GEO. HAINES will SELL by AUCTION, on the PREMISES Wilton-mews-row, Chelsea, on TUESDAY, JANUARY 24, at TWELVE o'clock, all the MATERIALS of LIGHT DWELLING HOUSES to be taken down for the 2nd Ranelagh-new building brickwork (old bricks, tiles of every kind, slates, lead, sash frames, &c.), fittings, Mantels and Stoves, at the Premises, and at Mr. Haines's offices, Great Marlborough-street West, Lisson-square, and 12, High-street Bow.

NOTICE TO THE GOVERNMENT CONTRACTORS AND TIMBER MERCHANTS.—Large Shipping Timber, with 1, 2, Top, and Back, standing on the Midgham Estate, Berkshire, 9½ miles from Newbury, and one from Woolhampton, Great Western Railway station.

MR. ALEXANDER DAVIS is instructed by James Thorpe Fooke, Esq. to SELL by AUCTION, at the LOWER ENGLEFIELD, Woolhampton, Berks, on FRIDAY, the 24th day of JANUARY, 1851, at Two for Three in the afternoon, 167 large Timber OAKS, standing Large ELM TREES, standing in the park and adjoining fields; also a few useful ASH, Cut Hunt, Abele, Alder, Spanish and Lime. The above oak and elm is of capital planking timber, being of good lengths, and very large meetings, beautifully headed with a thick coat of fine old bark. The Auctioneer can with confidence call the attention of all timber merchants to the above sale; such fine old noble trees are not often met with, merchantable station. Liberal credit will be allowed to the extent of the bidding. Further particulars may be had on application of Mr. WILLIAM BENHAM, the woodman, at the Garden, will show the lots, of whom particulars may be had; also of the Auctioneer, Valuer and Estate Agent, Market-place, Newbury, Berks.

COULSTONE, four miles from Westbury, Wilts. To Timber merchants, Shipwrights, and Others. Important Sale of Oak, Elm, and Ash Timber.

MR. LAVINGTON is instructed by James Taylor, Esq. to SELL by AUCTION, at the LAMB INN, Thatcham, on WEDNESDAY, the 29th of JANUARY, 1851, at TWELVE o'clock, all the useful Timber trees which he produced, the 1st 1,000 OAK and 1,000 ASH TREES, of very large dimensions, with their lops and bark, now standing on Sick's Common Farm, within 2 miles of the Westbury Railway Station, and three miles of the Kennet and Avon Canal. Mr. L. respectfully invites the attention of Timber merchants, Shipbuilders, &c. to the above sale. The trees are of an unusually fine growth and prime quality, even for this neighbourhood, which is so celebrated for its timber, the oaks ranging in the 1st 1,000 from 80 to 100, and the ashes from 70 to 120, and of extreme length; the ash from its fine fall. The usual terms of credit will be given, and every possible convenience extended to purchasers. Catalogues may be obtained of the Auctioneer, Poulshot Lodge Farm, Devizes; and of Mr. BEAVEN, the tenant, who will supply a person to show the different lots.

FURBER will SELL by AUCTION, on the PREMISES, Nos. 1 and 2, Red Lion-passage, Red Lion-street, Clerkenwell, on MONDAY next, JANUARY 27, at TWELVE for ONE, in lots by order of the Worshipful Company of Goldsmiths, the BUILDING MATERIALS of TWO HOUSES, Nos. 1 and 2, Red Lion-passage, comprising a large stock of sound bricks, lead gutters, flashing and pipe, deal flooring boards, joists, rafters, principal timbers, panelled doors, sashes, doors, shutters, internal fittings and fixtures, stone coping, York paving, and the usual matters of building materials. May be viewed, and catalogues had on the Premises; of the Clerk of the Goldsmiths' Hall, of P. Hannen, Esq. 5, Cavendish-square; and at the Auctioneer's Offices, in Warwick-court, Gray's-inn.

TO TIMBER MERCHANTS AND OTHERS.—St. Pancras Sawing-Mills. Dissolution of Partnership

MR. WILLIAM DOUGLAS has received instructions to SELL by AUCTION, on the PREMISES, Pancras-street, off St. Pancras-road, on WEDNESDAY, JANUARY 29th, at ELEVEN precisely, the entire STOCK IN TRADE, consisting of a lot 50 logs, 200 battens, 1,000 feet boarding, useful 4-inch and 3-inch deals, 200 feet mahogany, 1,000 feet beadings, 5,000 feet mouldings, large assortment of unplaned wares, in toilet services, bath, &c., bronzed fenders, Queen's metal and plated wares, copper goods, in preserving pans, toasters, coal scuttles, moulds, & c., large quantity of table cutlery, plain & fancy wares, tin wares, kitchen utensils, in axes and adzes, chisels, planers, hand vices, 100 dozen files, braces and bits, carpenters' and cabinet makers' tools, gentlemen's toilet-ware, carpenters' benches, deal boards, beds and bedsteads, 1 dozen looking glasses, &c. &c. Also the valuable modern HOUSEHOLD FURNITURE, removed from suite of chairs, couch, centre table, & chimney glasses, Brussels carpets, mahogany four post bedsteads, beds and bedding, chest of drawers, chamber furniture, and kitchen requisites. To be viewed on SATURDAY previous to the sale, when catalogues may be had on the Premises; of Mr. SHEPHARD, Solicitor, Clifford's-inn, and of Messrs. FULLER and HORSEY, Billiter-street, City.

TO CONNOISEURS, HOUSE DECORATORS, BUILDERS, AND OTHERS

MR. LEREW will SELL by AUCTION, at No. 29, High Holborn, on WEDNESDAY, JAN. 24, at TWELVE for ONE o'clock precisely, a large quantity of PANELS in various patterns and sizes, sliding two machines for making bead work, fitter specimens, &c. May be viewed the day before the sale; and catalogues had on the premises, and of the Auctioneer, Cardington-street, Hampstead-road.

TO BUILDERS, CARPENTERS, PIANOFORTE MAKERS, VENEERERS, AND OTHERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, 8, Edward-street, Regent's-park, on TUESDAY, JAN. 28th, at ELEVEN for TWELVE in account of the maker (Lease, 3 years unexpired), which comprise a quantity of PLANKS, DEALS, and BATTENS, Veneers, Mahogany, Rosewood, Satin Wood, Beech, and Lime Tree, Seasoning, Seasoned Backs, Lathes, 5 Panel Doors; pressed veneers, and white Fiorentine, at Stall &c. May be viewed the day before and catalogues had at the Auction Offices, Cardington-street, Hampstead road, near the Euston Station.

RETFORD, NOTTS.—To Contractors, Builders, Cabinetmakers, Coachmakers, Farmers, and Others.

MR. PARLBY has received instructions from Messrs. Wilson and Ashford, of Retford, to SELL by AUCTION, on MONDAY, the 10th of FEBRUARY, 1851, a SPACIOUS RANGE of TIMBER, consisting of about 3,000 pieces of spruce and pine deals and battens; about 200 squares of seasoned yellow pine boards; 1,000 logs of Memel and Quebec timber, including 250 logs of fine rosewood, five logs of birdseye maple, 10 logs of Havannah cedar, and about 200 hingewood spars; also a large quantity of mahogany, rosewood, and maple veneers; a quantity of wheelwrights' materials, consisting of shafts and felloes, axletrees, oak and ash planking, lime-tree boards; also a quantity of seasoned oak building timber, consisting of doors, wind sashes, and boilers; grates, chimneypieces, &c. The whole will be arranged in lots for the convenience of purchasers. Descriptive catalogues will be printed a few days before the above sale; and such timber that cannot be sold at the above sale will be offered by private contract on the following day. Parties desirous of purchasing timber previous to the sale can view the same at any time by applying to Messrs. Wilson and Ashford, Retford, Notts; and further particulars may be had at the Auction Mart, Tokenhouse-yard, City. Approved bills at two months will be taken for all purchases exceeding 5*l*.

TO BUILDERS AND OTHERS

BUILDING FRONTAGES TO BE LET, for erection of seven detached VILLAS, in BLESSINGTON ROAD, Blackheath, adjoining the Blackheath Proprietary School, and within a few minutes' walk of the Blackheath Railway. Accommodation will be afforded to respectable men. For path plans apply at Messrs. Dowbiggin and Cobb's, Millman-street, Bloomsbury; or at their Office in Church-lane, Lee.

LAND TO BE LET for Building Purposes (about three acres), on East-hill, Wandsworth, within five minutes' walk of the Wandsworth Railway Station, and 4 from the Clapham Station. A portion of the necessary funds will be advanced to the party requiring it, if approved. Apply to Messrs. Farmiloe and Son, 148, Aldersgate-street, City.

TO BREWERS and DISTILLERS.—An old established and valuable TOWN BREWERY TO BE DISPOSED OF, on advantageous terms (or to let for a distillery), situated in Green-walk, Holland-street, Blackfriars, with private side and tap doors. The plant comprises a twelve quarter mash tun, coolers, liquor backs, and all corresponding utensils. The plant to be taken at a fair valuation.—Apply to J. D. 23, Bankside, Southwark.

VALUABLE BUILDING LAND TO BE SOLD, in plots, or LET on LEASES, at moderate groundrents; special advantages will be offered to builders or purchasers; the land is freehold, and the situation singularly eligible, near to a first-class railway station surrounded by a park and open meadows, the soil gravel, of which there is an unlimited supply, the neighbourhood highly respectable, and proverbially healthy, and the demand for villas far exceeds the supply.—Particulars may be obtained of Mr J. S. SCOTT, Surveyor, 13, Commercial-road, St. George's East, and of Mr ABRAHAMS, Auctioneer and Estate Agent, London-road, Twickenham.

EXTENSIVE MANUFACTURING

PREMISES, Lambeth.—TO BE LET, those very commodious MERCANTILE PREMISES, known as the Lambeth Starch Works, situate in Princes-street, Lambeth, with or without the waterside warehouses or granaries attached. Those premises are in every respect adapted for carrying on any manufacture, trade, or business requiring space and facilities of railway and water conveyance.—Apply to Mr. ROGERS, Surveyor, 110, Canon-row, Westminster, or Palace chambers, old Lambeth; Mr. J. B. CLARK, 3, Guildford-place, Upper Kennington-lane; or to Messrs. HODGSON and BURTON, 16, Salisbury-street, Strand.

TO BUILDERS, FREEHOLD LAND SOCIETIES, AND OTHERS

TO BE LET, on building lease, for a term of ninety-nine years, or SOLD, about THREE ACRES of FREEHOLD LAND, peculiarly adapted for the erection of third or fourth-rate houses, and situated about 1½ miles from Westminster-bridge, in a locality where dwelling-houses of the class contemplated are much in requisition. Lessee granted direct from the freeholder. A detached VILLA, adjoining the above, containing ten rooms, with stable and others, and about half an acre of garden, at present let to a highly respectable tenant. To be sold either separately, or in connection with the above. For particulars, apply to Messrs. WEHNERT and ASHDOWN, Architects, 42, Charing-cross.

WHARF and PREMISES TO BE LET, with immediate possession, about 60 feet frontage to the Thames, with large buildings, suitable for an engineer or founder, or other manufacturing business, with or without steam power. Vessels of burthen can discharge alongside.—Apply to WILLIAM BEECH, Globe Dock, Rotherhithe.

TO BE SOLD, FREEHOLD PROPERTY, with river frontage, wharf, and landing-place, known as the Three Crowns, Romford, Essex, with large garden, outhouses, and cottages adjoining, suitable for a manufactory of any description requiring to be carried on near to London.—For particulars inquire of Mr. JOHN GORE 12, North Wharf road, Paddington, within a short distance of the railway station.

January 24, 1851.

A LARGE BUSINESS, with a district Patent Right for working the same, may be purchased at a small outlay. The steam is fixed plant, with two first-rate steam-engines, all in perfect working condition, may be taken on lease for a term of years. A practical gentleman is only wanted, the capital consisting of 200*l*. or 300*l*., and will find ample scope for extending the business and the further expiration of the patent to most profitable uses. Full particulars may be had from a gentleman part of the proprietor to refute from business, and as such a one as seldom offers.—Apply to A. Z. John Bennett, esq. Solicitor, 33, Lincoln's-inn, London

TO ARCHITECTS and SURVEYORS.—TO BE DISPOSED OF, a small but increasing PRACTICE in a rising and beautiful watering-place; or an arrangement would be entered into for the exchange of a London practice of not less than equal extent.—Address, S. S. Office of "The Builder."

TO CABINET-MAKERS and OTHERS.—TO BE DISPOSED OF, by Private Treaty, the GOODWILL and STOCK IN TRADE of the well-established and respectable CABINET MAKERS and UPHOLSTERERS BUSINESS, for some time past carried on by the late Mr John Denson, in Cross-cheaping, in the city of Coventry. The shop and premises are eligibly situated in a good business, and arrangements may be made for a continuance of the present tenancy.—For further particulars, apply to Messrs. SPRIGG and PEACOCK, Lawen Prapers, Coventry.

TO CARPENTERS, BUILDERS, &c.—TO BE DISPOSED OF, in consequence of the declining health of the proprietor, an excellent JOBBING BUSINESS, established over fifty years, in the centre of the metropolis, near the waterside, and in the city of London, and upon an average about fifty men. The entire capacious workshops, counting-house, and yard, with a new hall building, &c. will be found adapted for a first-rate business requiring accommodation for a large staff of men. Apply to Messrs. HAMMOND and ELDARD, Estate Agents, &c. 28, Chancery-lane.

A GOOD JOBBING BRICKLAYER'S BUSINESS: the HOUSE TO BE LET and the BUSINESS to be PARTED WITH, at a low premium, owing to the death of the proprietor; the stock to be taken at a valuation.—Inquire on the Premises, next door to the Vine, Kentish-town.—Established twenty-six years.

TO PLUMBERS, GLAZIERS, and PAINTERS.—In consequence of the death of the late proprietor an excellent, old-established BUSINESS in the above line in a first-rate neighbourhood in the West end, together with the Lease of the Premises, TO BE DISPOSED OF immediately.—For further particulars, and to treat, apply to Mr DRAKEFORD, 27, College-place, Camden-town.

TOTTENHAM.—To be DISPOSED OF, in consequence of the death of Mr John Eaton, an old established WORKING BUSINESS, with Shop and Dwelling-house. The premises are eligibly situate near the High-cross, Tottenham, and well adapted for carrying on an extensive business in the above trades, and will be sold on very reasonable terms.—Apply to Mr. RICHARDS, Auctioneer, Tottenham. All persons indebted to or having claims against the above estate, are requested to send their accounts, and receive particulars of their claims to ELNER COVE, Tottenham.

TO BE DISPOSED OF, in consequence of the illness of the proprietor, a good BUSINESS, with convenient premises, in the Market Town of Llandilo Fawr, South Wales. Having the utmost extensive supplies of patent articles in good and increasing demand, a slight knowledge of ironmongery although the trade is unable to withdraw. For particulars, apply by letter, addressed to P. G. Post-office, Swansea.

TO ENGINEERS, MILL-OWNERS, CONTRACTORS, AND OTHERS.

AUGUSTUS SMITH, Auctioneer, Valuer, &c. 25, Blackfriars-road, two doors from Holland-street, having had seventeen years' practical experience in selling of all kinds of engines, machinery, fixtures, mechanical and engineering tools, plants, &c. respectfully solicits a share of patronage in the above line. Private sales effected every day. Sales by auction every week, at which all accounts settled the day after delivery; also a free registry kept of all engines, boilers, and machinery for sale by private contract.

LONDON: Printed by CHARLES WYMAN, of 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields, and published by the said CHARLES WYMAN, at the Office of "The Builder," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, January 25, 1851.

BRECONSHIRE HIGHWAYS. — To ROAD SURVEYORS.—Notice is hereby given, that the ROADS BOARD of the County of BRECON will, in pursuance of the 14th and 15th Vict. c. 76 and 17th Vict. c. 7, at their meeting on the 14th day of FEBRUARY next, or at a meeting to be adjourned thereto, proceed to appoint SURVEYORS for the several districts under mentioned (the limits of which district were published in the *Hereford Times*, of the 14th instant). Each Surveyor will be required to devote his whole time to the superintendence of the roads in his district, and (except as regards the No. 8 district), to keep a horse. He will be allowed the necessary forms, stationery, and postages, but no other disbursements whatever. Candidates for such appointments must send applications, stating the district for which they apply, to the Office of the Clerk, at Brecon, on or before FRIDAY, the 9th day of FEBRUARY next, and each application, must be accompanied with testimonials, as to the diligence, intelligence, and trustworthiness of each candidate, and also as to his qualifications as a road surveyor and accountant, and also with written undertakings from the parties willing to become sureties; the several districts, and the number of miles of highways at present kept in repair in each, the annual salaries to be paid to the surveyors, and the amount of bail to be given, with two sureties in each case, is as follows:—

No.	District.	Miles.	Salary.	Amount of Bail.
2	Brecon ...	168	100	300
4	Builth ...	146	90	300
5	Crickhowel	118	90	300
6	Defynock..	214	100	300
7	Talgarth ..	136	100	300
8	Vayuor....	43	50	150

By order of the County Roads Board.
JOSEPH RICHARD COBB, Clerk.
Brecon, January 20, 1855.

TO ENGINEERS AND SURVEYORS.

SURVEYOR WANTED.—The Local Board of Health and the Council of the Borough of Lancaster are desirous of engaging a qualified person to perform the duties of SURVEYOR and Inspector of Nuisances to the Board of Health, and Surveyor to the Town Council, to be restricted from any other occupation or emoluments. Salary for the above offices £90 per annum. Applicat ons, stating age and qualifications, with testimonials, may be addressed to the Town Clerk not later than the 1st day of FEBRUARY next, at who e office a particular statement of the duties may be seen.

Lancaster, January 18, 1855.

JOHN ARTHUR IKIN, Town clerk.

Leeds, January 11th, 1855.

TO BUILDERS.

Royal Engineer Office, Portsmouth, 22nd January, 1855.

TENDERS will be received by the Hon. Board of Ordnance, at their Office, Pall-mall, London, on WEDNESDAY, the 31st JANUARY, 1855, from such persons as may be willing to undertake the CONSTRUCTION and ERECTION of temporary WOODEN BUILDINGS, at Aldershot Heath, in the county of Hants, for the accommodation of 2,000 men, with the due proportion of officers, stores, &c. the whole to be completed by the 15th day of MARCH next. The plans, specifications, and conditions of contract may be seen, and every information obtained, on application at this office, between the hours of TEN and FOUR each day, Sundays excepted. Tenders to be endorsed "Tender for the Erection of Wooden Buildings on Aldershot Heath, County of Hants." The person whose Tender shall be approved, will be required to provide eligible securities and execute a bond for the due performance thereof, and to pay half the expense of the stamp on the bond.

CONTRACTS.

TO BUILDERS AND OTHERS.

SEALED TENDERS for the ENLARGEMENT of the WEST JETTY, at the ROYAL POWDER-WORKS, Kinterbury, for a specific sum, will be received at the ORDNANCE OFFICE, PALL-MALL, LONDON, on or before the 7th FEBRUARY, 1855, at noon. Detailed specifications of the above, and every requisite information, may be obtained at the Royal Engineer's Office, Hall Point, daily, Sundays excepted, between the hours of TEN and FOUR o'clock, from the 30th instant to 6th FEBRUARY both days inclusive.

Royal Engineer's Office, Devonport, 22nd January, 1855.

ORDNANCE CONTRACTS. — Notice is hereby given, that the Honourable the BOARD of ORDNANCE, will receive TENDERS, on or before SATURDAY the 10th of FEBRUARY next, for the Performance of such Work as may be required (by them) of the undermentioned trades, at York, Hull, Leeds, Bradford, and Scarbro', for three years, commencing from the 1st of April next:—

Bricklayers'	Work.
Masons' and Paviors'	do.
Carpenters'	do.
Slaters'	do
Plasterers'	do.
Plumbers'	do.
Smiths'	do.
Painters', Glaziers', and Paperhangers' ..	do.
(in the city of York only).	

N.B. Parties are particularly required to observe, that it is more desirable to Tender for the whole of the trades at one place than for a part only; but the per centages must be separately stated for each trade.

Printed Schedules for the different trades, and forms of Tender, can be obtained on application at the Royal Engineer's Office, 5, New wark-terrace, York; the Barrack Office, Citadel, Hull; the Barrack Office, Leeds Barracks; and of the Master Gunner, Scarbro' Castle, any Sunday excepted, between Ten and Four o'clock, until FRIDAY, the 9th FEBRUARY next.

Royal Engineer's Office, York, Jan. 10, 1855.

CONTRACTS.—Notice is hereby given, that TENDERS will be received at the ORDNANCE OFFICE, PALL MALL, London, on or before THURSDAY, the 8th day of FEBRUARY, 1855, for the performance of the following branches of Artificers' Work, for the ordnance Department at the following Stations in the MEDWAY DISTRICT, for a period of three years from the 1st APRIL, 1855, determinable at any period after one year, on either party giving to the other three months' notice in writing, viz:—

At Chatham and its environs; Gravesend, including Tilbury Fort, Shorne Mead, and Coal House Point Batteries.

Plumbers'	Work.
Painters', Glaziers', and Paperhangers' do.	
Smiths'	Work, &c.

At Maidstone.

Carpenters'	Work, &c.
Bricklayers'	Work
Plasterers'	do.
Slaters'	do.
Mason's	do.
Paviors'	do.
Plumbers'	do.
Painters', Glaziers', and Paperhangers'	do.
Smiths'	Work, &c.

Separate Tenders to be made for Chatham and its environs; Gravesend, with Tilbury Fort, Shorne Mead Battery, together with Coal House Point Battery; and at Maidstone; as well as for the different trades; nevertheless, Tenders may be submitted for all the trades together in one Contract for each Station. Printed Forms and Schedules of Contract may be seen and specimens at the Royal Engineer's office at Chatham, Gravesend, and Maidstone Barracks, until the 7th day of FEBRUARY next. Sealed Tenders not on Tender can be admitted after the said 8th day of FEBRUARY, 1855. The Board of Ordnance reserve to themselves the right of rejecting any or all Tenders that may be presented.

Royal Engineer's Office, Chatham, Jan. 18, 1855.

Royal Engineer Office, Portsmouth, 23rd January, 1855.

TO BUILDERS.

NOTICE is hereby given, that TENDERS will be received by the Honourable Board of Ordnance, at their Office, Pall-mall, London, on WEDNESDAY, the 7th day of FEBRUARY next, from such persons as may be willing to undertake the ERECTION of a BATTERY, with Magazine, &c. near Southsea Castle, in the county of Hants. The plans, specification, and conditions of contract may be seen, and every information obtained, on application to Mr. KILTON, Clerk of Works, at this Office, between the hours of TEN and FOUR each day, Sundays excepted. Tenders to be endorsed, "Tenders for the Erection of a Battery, &c. near Southsea Castle, in the County of Hants."

Royal Engineer's Office, Portsmouth, 22nd Jan. 1855.

TO BUILDERS.

NOTICE is hereby given, that TENDERS will be received by the Honourable Board of Ordnance, at their office, Pall-mall, London, on MONDAY, the 5th day of FEBRUARY next, from such persons as may be willing to undertake the ERECTION of the undermentioned permanent BUILDINGS, at Aldershot-heath, in the county of Hants, viz:—

Officers' Quarters and Soldiers' Barracks for Artillery.	
Ditto ditto	for Cavalry.
Ditto ditto	for Infantry.
Hospital, Riding school, Guardhouses, and such other necessary Buildings as may be required.	

The plans may be seen, and the printed schedules of prices and conditions of the contract obtained, on application at this Office, between the hours of TEN and FOUR, each day, Sundays excepted. The person whose Tender shall be approved, will be required to provide eligible securities, and execute a bond, for the due performance thereof, and to pay half the amount of the stamp on the bond.

[For remainder of Contracts see next page.

CONTRACTS.

TO BUILDERS.

BURY ST. EDMUND'S CEMETERY.—The Burial Board are prepared to receive TENDERS (in one sum for the whole of the Works) for the ERECTION of the TWO CHAPELS, LODGE, ENTRANCE-GATES, and IRON FENCING, in accordance with the designs prepared under Cemetery The plans and specifications may be seen at the Clerk's Office, No. 2, Hatter street, Bury St. Edmund's, and duplicates thereof at the offices of Messrs COOPER and BECK, 1, Furnivall's-inn, London, on and after the 22nd instant. Sealed Tenders to be sent to the Clerk to the Board, on or before the end of FEBRUARY next, at TWELVE o'clock at noon, indorsed "Tender for Cemetery Works." The Board will require ample security for the due performance of the contract, but do not bind themselves to accept the lowest, or any Tender, unless perfectly satisfactory

JOHN W. ION, Clerk to the Board.

2, Hatter-street, Bury St. Edmund's, Jan 15, 1855.

TO BUILDERS

TENDERS are required for the ERECTION of FARM BUILDINGS and COTTAGES at Harlow, in the county of Essex. The drawings and specifications of the works can be seen on application to CHAS. BARNARD, Esq., at Harlowbury Farmhouse, near the Harlow Station; and any further information obtained at the Office of Mr. J. F. CLARK, Architect, Newmarket. Tenders are to be delivered on SATURDAY, the 3rd of FEBRUARY next, and will be opened in the presence of parties tendering. The lowest or any Tender will not necessarily be accepted.

TO PIPE-FOUNDERS

THE TOWN-COUNCIL of the BOROUGH of LEEDS is desirous to receive TENDERS for about three miles of the 24-INCH CAST-IRON SOCKET-PIPES, and other Castings. Drawings and specification may be seen at the office of the Town Clerk, in Leeds, and at the office of Mr. HAWKESLEY, Civil Engineer, 1, Great George-street, Westminster. Tenders to be left at either of the offices on or before the ELEVENTH day of JANUARY instant, and Tenders must be delivered in accordance with the specification, on TUESDAY, the THIRTIETH day of JANUARY instant. The Town Council do not pledge themselves to accept the lowest or other Tender.

By order,

JOHN ARTHUR IKIN, Town Clerk.

Leeds, January 11, 1855.

CARLISLE LOCAL BOARD of HEALTH.—SEWERAGE WORKS.—To CONTRACTORS, EXCAVATORS, EARTHENWARE-PIPE LAYERS, and OTHERS.—The Local Board hereby give Notice, that they are prepared to receive TENDERS from parties willing to undertake the following CONTRACT:

CONTRACT No. 6.—For EXCAVATIONS, LAYING and JOINTING EARTHENWARE SEWER and DRAIN PIPES, also for the CONSTRUCTION of MAN HOLES and LAMP HOLES, FIXING GULLIES, and for OTHER WORKS.

The specifications and drawings may be examined, and forms of Tender, schedules, and bills of quantities may be obtained, free of charge, on application at the Office of the Resident Engineer, 161 Butcher-market, Carlisle; or at the Offices of ROBERT RAWLINSON, C.B., 34, Parliament-street, Westminster. Sealed Tenders to be delivered at the Office of the Local Board of Health, Carlisle, before TWELVE o'clock on WEDNESDAY, the 31st day of JANUARY instant, endorsed "Tender for Contract No. 6."

Dated, ISAAC CARTMELL, Committee Clerk to the Board

Carlisle, 17th January, 1855.

TO BUILDERS

PERSONS willing to TENDER for the ERECTION of a HOUSE, in carcase, on the Mount Albion Estate, at Ramsgate, may see the drawings and specifications, and conditions, at the Office of Mr. LEWIS CUBITT, 38, Bedford-square, London, between the hours of TEN and THREE o'clock, and there learn where they can purchase bills of the quantities. Tenders to be delivered at the said Office, by TWELVE o'clock precisely, on THURSDAY, the 1st day of FEBRUARY next. The lowest Tender may not necessarily be accepted.

THE LONDON DOCK COMPANY require for their Works, FIFTEEN EARTH-WAGGONS, TWENTY-TONS, that belong to CONTRACTORS, and 350 SLEEPERS, all to be in good order, second hand, and delivered in London. Any person having the above to dispose of, is requested to send the price to J. M. RENDEL, Esq., 8, Great George-street, Westminster. Further particulars may be had on application to the Resident Engineer, Mr. A. T. ANDREWS, Office of Works, Lower Shadwell.

SAINT LEONARD, Shoreditch, Middlesex.—The IRONFOUNDERS, BUILDERS, SLATERS, and OTHERS. The Trustees for Cleaning, Paving, &c. the Parish of Saint Leonard, Shoreditch, Middlesex, will meet in the VESTRY-ROOM, at Shoreditch Church, on THURSDAY, the 1st of FEBRUARY 1855 at SIX o'clock in the evening, to receive PROPOSALS for the ERECTION and COMPLETION of TWO PUBLIC URINALS, one to be erected in the High street, Hoxton, and one on the south side of Swan yard, Shoreditch, near the termination of the Eastern Counties Railway. The plans and specification for such buildings may be seen, and any other information obtained at the Office of the Architect, Mr. THOMAS E. KNIGHTLEY, 22, Cannon-street, City. The Proposals must be delivered at the Office of the Clerk to the Trustees, 37, Hoxton-square, before o'clock in the afternoon of the day of meeting, and it will be necessary that some person should attend the meeting of the Trustees, in case of any explanation being required. The Trustees do not bind themselves to accept the lowest or any Tender.

By order of the Trustees, W. G. DAVIS, Clerk to the Trustees.

37, Hoxton's-square, January 23, 1855.

CONTRACTS for ROADS and SEWERS.—LONDON ASSURANCE FREEHOLD LAND SOCIETY, 29, Moorgate-street. TENDERS are required for making the ROADS, SEWERS, EARTHWORKS, &c. of the SHEPHERD'S BUSH ESTATE.—Particulars may be had of the Society's Architect and Surveyor, J. E. SAUNDERS, jun. Esq., 9 Finsbury circus (to whom signed Tenders are to be sent by TWELVE o'clock, on 8th FEBRUARY, endorsed, "Tenders for Roads and Sewers, Shepherd's Bush Estate, London Assurance Land Society"—The Directors do not bind themselves to accept the lowest or any Tender.

Jan 25, 1855. THOMAS ALFRED BURR, Manager.

TO BUILDERS AND OTHERS.

MORTUARY CHAPELS, &c. &c. ELY, CAMBRIDGESHIRE.—NOTICE is hereby given, that the Burial Board for the Parishes of Holy Trinity and Saint Mary, in Ely, will be prepared at their meeting to be held at the Grand Jury-room, in the Shire-hall, Ely, on WEDNESDAY EVENING, the 31st instant, at EIGHT o'clock, to receive TENDERS for FENCING and LAYING OUT their new BURIAL GROUND, and for ERECTING TWO MORTUARY CHAPELS and LODGE thereon. The plans, specifications, and quantities of the various contracts may be seen at the Office of Messrs. PRITCHETT and NESS, Architects, York, from the Morning of MONDAY the 15th, to the Evening of SATURDAY, the 20th of JANUARY instant, and afterwards at my Office in Ely, from the Morning of MONDAY, the 22nd, to the Evening of WEDNESDAY, the 31st instant, when the Tenders are to be delivered. Contractors are to give such security for the performance of their contracts as the Board may require. Board not pledged to accept the lowest or any of the Tenders.

Ely, January 12th, 1855.

By order of the Board,

WM. MARSHALL, Clerk

TENDERS are required for the ERECTION of a RESIDENCE and FARM BUILDINGS in the parish of EXNING, for Mr. R. WESTLEY. The plans and specifications of the works can be seen on application at the Office of Mr. J. F. CLARK, Architect, NEWMARKET. Tenders are to be delivered on SATURDAY, the 24th of FEBRUARY next, and the lowest, or any tender will not necessarily be accepted.

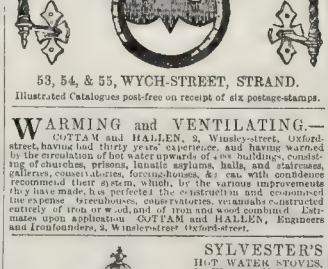
CONTRACTS.

TO BUILDERS AND OTHERS.

NEW BANK in Corn street, Bristol, for the West of England and South Wales District Banking Company. Parties desirous of CONTRACTING for the whole or any portion of the ARTIFICERS' WORKS, to be performed in the ERECTION and COMPLETION of the above new BUILDING, from a plan, levels and sections prepared, or to be executed, may see the drawings, specifications, and conditions of contract, from TEN to FIVE every day, until THURSDAY, 8th of FEBRUARY next, on or before which day Tenders, sealed, endorsed, and addressed to the Directors, are to be delivered to me. The Directors will not be bound to accept the lowest or any Tender. The quantities will be taken by Mr. J. WILLIAMS, of London, and a copy will be sent to all parties signifying their *bona fide* intention to submit Tenders.

WM. BRUCE GINGELL, } Architects.
THOS. BRUCE LYSAGHT, }

Saint Werburgh's Chambers, 8 mall street, Bristol, 19th Jan 1855



TO BUILDERS AND CONTRACTORS

TENDERS required for the ERECTION of THREE PORTABLE WOODEN HOUSES, conjointly.—To see plan, and for further information, apply to Mr. VALE, 95, Carlton road Villas, Carlton road, Kentish town.

SOMERSET ASSIZE COURTS, &c.—Letters having been received by the Clerk of the Peace and County Surveyor, containing an unavoidable error of information in the previous advertisement, this is therefore given, to say that the size of the Assize Courts, Crown and Civil, and of the Rooms and Offices connected with them, and of the Record Rooms and Clerk of the Peace's Office, and the amount of accommodation in the Judges' House, for themselves and suite, are to be such as are generally found requisite in other provincial towns. Architects may pace the Courts, Record Offices, &c. in one and the Judges' House in another building, or the whole in one block; but in either case the entire cost not to exceed 18,000 l.—Plans may be on a scale not less than 8 feet to an inch.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, & 55, WYCH-STREET, STRAND.

Illustrated Catalogues post-free on receipt of six postage-stamps.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot air upwards of 1000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood and iron and wood combined. Estimates upon application. COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Conservatories, Stores, Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stoves may be heated from one Boiler, and may be used entirely well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to

SYLVESTER and CO. Engineers, and Manufacturers of Heating Apparatus, 96, Great Russel-street, Bloomsbury.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is most powerful in its effect, suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment, where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opening to the Monument) London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE.—BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office 145, Regent-street, London.

HEATING by HOT WATER.—JOHN WELKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. to their superior APPARATUS. At Messrs. Weeks's establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,800 feet in length, at an small expense per day as fuel and labour of as 3d. This achievement in heating by hot water is unprecedented.

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection, may now be seen in daily operation at EDWARDS and SON'S, 49, Poland-street, Oxford-street. By this grate a smoky chimney is prevented, no chimney sweeping is required, and a saving of at least thirty five per cent is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and of hot air pedestal stoves. Old grates are altered to this principle.—Prospectus sent on application.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 17, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 372, Holborn

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for.—the prize of public approbation, having been obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, which is pre-eminently the best, most perfect, economical, and complete apparatus for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, R. W. KENNARD and CO. 67, Upper Thames-street, London. Manufactory, Luton, Beds.

CUNDY'S PATENT PURE WARM-AIR STOVES.—The only Pedestal Stove which gained a Prize Medal (Class 27B) at the Great Exhibition in 1851. Especially adapted for warming with great economy churches, chapels, schools, entrance-halls, and libraries. Can be purchased at the manufactory of CUTLER and SONS, Ironfounders, &c. 16, Great Queen-street, long-acre, where a large stock is always ready for immediate delivery; and of all Ironmongers.

Price 6l. 6s.; 9l. 9s.; and 12l. 12s.

HOT AIR, GAS, VESTA, JOYCE'S STOVES.—STOVES for the economical and safe heating of halls, shops, warehouses, passages, basements, and the like, being at this season fully demonstrated, WILLIAM S. BURTON invites attention to his unrivalled assortment, adapted (one or the other) to every conceivable requirement, at prices from 10s. each to 30 guineas. His variety of register and other stoves is the largest in existence

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from all the various manufactories all that is new and choice in Bronze, Or-molu, and Chandeliers, adapted to offices, passages, and dwelling rooms, as well as to have some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Establishment the largest and most remarkable in the kingdom, viz. from 18s. 9d. (two light) to 16l.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS devoted to the show of GENERAL FURNISHING IRONMONGERY (including cutlery, Britannia ware, plated, and japanned wares, iron and brass bedsteads, so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent per post free. The money returned for every article not approved of.

39, OXFORD-STREET (corner of Newman-street); 1, 2, and 3, NEWMAN-STREET, and 4 and 5, PERRY'S-PLACE.

MAGNUS'S PATENT ENAMELLED SLATE CABINET FORMED FIRE-PLACE. This is decidedly the most novel, elegant, economic, and comfortable fire-place that has ever been introduced to the public. It moves on castors, and stands BEFORE the opening of the chimney, projecting into the room as a regular cabinet. It is composed of fire-stone and slate, and has hot-air chambers. It may also be fitted up for gas instead of coal. By the economical, who dislike to see half the heat from the coal wasted in the chimney, and by persons of taste, who object to the stiff unmeaning chimney-piece in ordinary use, the CABINET FORMED FIRE PLACE has only to be seen to ensure its adoption. Price from ten guineas upwards. Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico.

JAMES MICHIE, Engineer, &c. Battersea-park, Nine Elms, manufacturer of all kinds of STEAM-ENGINES (portable and stationary), Sawing Machinery, Pumps, Cranes, Crabs, &c.

N.B. Several high-pressure Steam-engines for Sale.

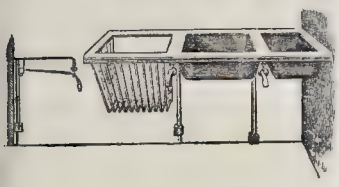
TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,



ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses.
Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.
CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original progetors of the above arrangement of MANGER RACK and WATER-TROUGH, AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their intention secured by patent, which includes an entirely new method of attaching the halter ball and rein, giving to the horse greater freedom, and being noiseless in operation, add much to its comfort while feeding and convenience when at rest.

COTTAM'S ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and impervious to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED

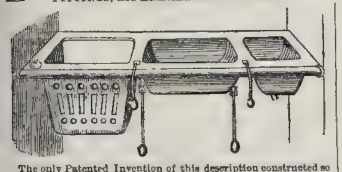
Improved Stable Guttering, with Moveable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture kept on Show.

Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

IMPROVED PUMPS,

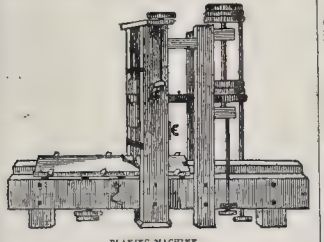


Of the best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle; they are not likely to get out of order; should they do so, can easily be repaired, as the Pump is so contrived that the valves can readily be got at.

An Improved CAST IRON TRAP strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers, Slaughter Houses &c &c. It is so formed that the iron plate will pass any matter the top grating will let through and therefore is not liable to stoppages, and well adapted to Stables and Stable-yards, for saving the best part of Liquid Manure.

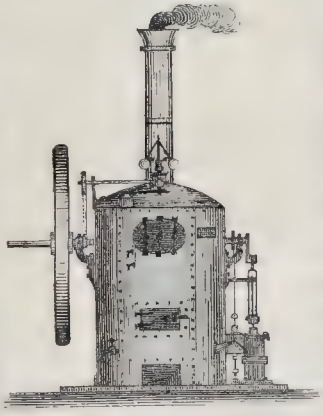
BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.



The only Patented Invention of this description constructed so as to prevent considerable waste of Hay and Corn, together with all the newest improvements.
STABLE FITTINGS, FORTY SHILLINGS PER SET, to fill up the whole width of Stalls, and can be had enamelled or galvanized. Every description of Mangers, Racks, and Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c.
Manufacturer of Kite's Patent Noiseless Cast-iron Smoke-curing Chimney Cans (300 on Buckingham Palace), price 35s. each.
JAMES BARTON, Ironfounder, &c. 370, Oxford-street, a few doors east of the Pantheon.

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air Bricks, &c

J. JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality. Also cast-iron pipes for gas, water, or drainage; bends, tees, &c.; flange and hot-water pipes, with all the usual connections; lamp-posts and retorts, stable fittings, pig-troughs, &c. &c.
J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.



VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PLANING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and cabinet makers, railway carriage and waggon builders, machinists, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, morising, grooving, rebating, sawing, and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS. Patentee, 39, Lawton-street, Liverpool, from whom full particulars may be obtained.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

A SAVING of TIME and MATERIALS, with Solidity of Building.

HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 46, Albert-street, Manchester.

TESTIMONIAL.

"Thorn Island Battery Works, Milford Haven,
"Mr. Gough, "Jan. 19, 1855.
"Sir,—The three-horse power steam-engine purchased from you in 1854, for the purpose of hoisting shot and other material for the building of the above battery, has answered the purpose for which it was required remarkably well, and from its portableness was found very convenient to remove from one part of the building to another. The consumption of coals was about 4 cwt. in 10 hours.
"I am, Sir, yours truly, for THOMAS JACKSON,
"THOMAS SWAIN."

N.B. Wanted, an Apprentice to the Engineering Business, to reside on the premises. A premium will be required.—Apply as above.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 30 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope street, Clare-market, London.

CHUBB'S LOCKS & FIREPROOF SAFES.

INEFFECTUAL ATTEMPT ON THE STRONG ROOM OF THE LONDON AND NORTH WESTERN RAILWAY, LIVERPOOL.

"London and North-Western Railway Company.

"Liverpool, May 17, 1853

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your safe, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"8, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 23, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

SKAIFE'S GALVANIZING WORKS, Commercial road, Limehouse, London

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure locks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 35, High Holborn

TO HOOP-IRON MANUFACTURERS.

FREDERICK TYERMAN'S PATENT BOND.—The Patentee of the above Hoop-iron Bond is desirous of entering into an arrangement with reference to the manufacturing of the same.—Particulars of Mr FREDERICK TYERMAN, Architect, 14, Weymouth street, Portland place

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the original quarry owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, & NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally, their extensive assortment of veins, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom who is Marble Merchant for the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the effects late held by him at No. 5, Tresco-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the trade entirely on his own account. Mr. Thompson being no longer his agent

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention that defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing Mills, Vauxhall-bridge-road, Pimlico. WM. HUSTLER, Proprietor. —Two Marble Masons wanted.

BUILDERS, &c. &c.—Take Notice of the extraordinary Reduction made in the price of marble work at the WESTMINSTER MARBLE FACTORY. A Veined Marble Box Chimney-piece, only 30s. A good-sized Vein Marble Box Chimney-piece, with cane and basses on pilasts fitted up in the best style, only 3l. 12s. Their patent machinery enables them to execute Marble Floor at 2s. 6d. per foot super and every variety of Marble work at a reduction of 25 per cent. They contain the largest Stock of Chimney-pieces in England.—Address, WESTMINSTER MARBLE COMPANY, EARL-STREET, MILLBANK

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactures by the most powerful machinery in England other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Burdilla, Sienna, Veil Antique, Brocatella, Dove, St. Anne's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices

WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Pleasantness, Sedgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

CAEN and AUBIGNY STONE.—H. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge Offices: 245, High-street, Southwark, near the Town-hall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Isard, Bedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom

N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

GODSTONE STONE.—GATES and GEORGE beg to solicit the attention of architects, engineers, and builders to the above Stone, as being suitable for all purposes of construction, either as a substitute for brickwork, or in connection therewith, the latter in most respects being about the same as ordinary brickwork. It can be obtained in large quantities, and to special sizes, in rubble or rough square blocks, direct from the quarries.—Information and samples given at Caen wharf, Rotherhithe, and Hibernia chambers, London-bridge, Borough.

ANCASTER STONE, from the celebrated quarries of Mr. John Wilson, Ancaster, who has appointed GATES and GEORGE, Stone Merchants, his sole consignees for the London district. Ancaster Stone, so generally esteemed by the building profession, for its great durability, economy, and general utility, as to require but a trial to secure the approval of architects and others for its more extended use in building. Samples and other information can be obtained at the Great Northern Depôt, King's-cross; Caen-wharf, Rotherhithe; and Hibernian-chambers, London Bridge, Borough; or forwarded to address, free of charge.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Herefordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set; with jambs, moulded with large ogee on inner edge, set on plinths, Mantel, moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 30s. for more elaborate patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on-Tyne

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATE and SLAB WORK for the TRADE are READY, and can be had on application, inclosing a postage-stamp.

N.B. A liberal discount to the trade.

UNDER HER MAJESTY'S ROYAL LETTERS PATENT.

INDURATED STONE COMPANY, for INDURATING and RENDERING IMPERVIOUS STONE, BRICKS, TILES, and other Building Materials. Completely Registered, Dec. 23rd, 1852. The Company are now in a position to execute orders and grant licenses for the use of their valuable patent. The great advantage to be derived from the use of a material not only durable but non-absorbent must be evident to all. The saving in labour and repairs will be adopted for public works, such as docks, bridges, &c. would be very considerable, as local materials could be used, and the enormous cost of granite and other hard stones be avoided. The great value of Indurated Stone is especially adapted for monumental purposes, vaults, catacombs, &c. and an average saving of from twenty-five to fifty per cent. will be effected on the present list of the materials generally used. For sculpture and other works where considerable labour is expended, the advantage of this stone is prominent, as the finest work can be executed in sandstone, and become subsequently indestructible except by violence. The stone will also bear a brilliant polish, thereby rendering it effectual for a variety of ornamental purposes.—Applications for Shares will be received by the Sec. and at the Offices of the Company, 71, and 72, Basinghall-street, London, and at Plumstead, Kent, Iron Wells, where specimens may be seen and any information relative to the patent obtained, and by Messrs PAGDEN and HODGKINSON, Solicitors, 71, Mark-lane, London.

IMPERISHABLE STONE.—TRICKETT and PERKINS having erected new and powerful machinery, at their extensive quarries, are now able to execute orders to any extent with their much esteemed RAWDON HILL STONE, which, from its strength and durability, together with its beautiful colour and readiness of working, is one of the most desirable stone out, being at once useful and ornamental. Architects and others are requested to test the qualities for strength and durability, either for ornamental or constructive purposes. Samples and prices furnished by SAMUEL TRICKETT, Stone Wharf, Isle of Dogs.

Note.—Can be got any size, or delivered to any part by rail or water carriage.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN BILKINGTON, BOLOGNEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. County Agents and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1838. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Deron Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazzie, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Praed-street, Paddington, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roofs of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place with the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such articles becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B MORLEY and CO. and be the Company's Grinding Agents, in London, Messrs. CHARLES DEVAUX and CO., Wholesale Agents, 63, King William-street, City; JACK and BRABY, Whole ale and Retail Agents, 8, Tottenham court, New road, and 80 Upper Thames-street, city. In Manchester and Liverpool by Messrs. LAWFORD and CO. of 40, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company's Zinc Paints, and undertake painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs R ANDERSON and CO Timber-bush Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their Painters, who will be ready to execute any description of Painting and Decorating with the Pure Patent White Zinc Paint

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for Internal Use, to be painted in a few hours and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent, and all other Cements in use for building purposes. Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent—N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster Paris White, Mantle, Marble, Lime, Laths, Slates, and Slate Slabs Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Rideme, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Asplin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Wateshead-on-Tyne; at Messrs. Rosher's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greater confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and other, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1834.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead

These direful maladies, paralysis and painters' colic, will be entirely avoided It is entirely free from any poisonous or pernicious property whatever. Neither noxious gases, exposure to heat, nor tropical climates act upon it.

The Powdered White Zinc also may be had for grinding in Oil; also for use for Plaster Decorations, and purposes where it is used with Size, Varnish, Spirit, &c

To be had of the Wholesale Paint-dealers in the Original Packages as sent out from the Works To guard against the substitution of imitation Zinc Paints, each cask is stamped—HUBBUCK—LONDON—PATENT. And if the cask is not so marked, the reason is obvious.

A Circular, with full particulars, may be had of

THOMAS HUBBUCK AND SON

(THE ORIGINAL WHOLESALE MANUFACTURERS IN THIS COUNTRY),

PAINT AND VARNISH WORKS, UPPER EAST SMITHFIELD (opposite the London Docks), London.

WHITE OXIDE OF ZINC AND ZINC PAINT.

(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to first-class Decorations and House Painting. For from it possessing a greater affinity and hence its preservative properties for that Metal, whether employed for Warm or Cohering purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. J. and G. WALLIS, 84, Long-acre. Agent for Ireland: Mr. S BOYD, 46, Mary-street, Dublin.

PORTLAND CEMENT.—D. MOUNTAGUE begs most respectfully to inform the numerous Architects, Contractors, Builders, &c. who have for the last thirty years patronised his Roman Cement, Plaster, and other manufactures, that he is now enabled to supply them with a very superior Portland Cement, warranted to withstand the action of heat, frost, &c. and of uniform colour and quality. Orders received at Falcon Cement Wharf, Bankside, Southwark; Harrow-bridge Wharf, Stratford, Essex; and at the Cement Manufactory, Orchard House, Blackwall.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), is obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The adhesive property it possesses when mixed with sand, renders it a most valuable lime for mortar is burnt on an improved principle leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil-cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and CO. send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and true Mosaics, manufactures of a highly decorative character, and great durability, Slabs and Tiles for Fireplaces and Hearths, Coppers for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No 31, WILLIAM Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REWARD OF THE Jurors," page 561, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Flekings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves

Malm Place, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

BRICKS for OVEN-BUILDING, acknowledged the best for that purpose, delivered, 32s. to Londonbridge or Newington; beyond that distance, moderate charge cartage. Bricks of all description; yellow and light pickings, equal to seconds. Red facings, at 30s. in field; red and glazed pipes, about half the price of stoneware; white sand, nearly silver, in field or by barge; founders' sand and loam; good coloured gravel.—Address, B. PARKS, Lewisham Brickfields.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT. L. B. PEARSE and Co. Brick, Tile, Lime, and Cement Merchants, beg to inform builders, contractors, and the building trade generally, that they have now on sale at the above wharf, Cowley stocks, grizzles, and place; white cutters, seconds and paviors; cinkers, red cutters, and stocks; plain and pan tiles, 6 in. 9in, and 12 in.; white and red paving tiles; blue, red, and white ornamental tiles, blue and red ornamental ridges; Stourbridge, Welsh, and Yorkshire fire-bricks, lumps, tiles, and clay; ornamental and other wall copings; Bangor and other slates; stoneware sewer-pipes, bends, junctions, and syphons; closet-pans and traps, terra-cotta chimney-tops, trusses, brackets, vases, mouldings and paterae of the most improved patterns. Architects' designs worked to with accuracy and despatch Lump and ground grey stone lime, chalk lime for plastering, blue lias lump and ground lime, Roman, Portland, and lias cements, coarse and fine plaster, laths and hair.

N B—Good Gothenburg laths are now on sale at the above wharf, price 4s. per load.

GREAT NORTHERN RAILWAY.—L. B PEARSE and CO. Great Northern Wharf, York-road, King's-cross beg to inform builders, contractors, and others who are engaged in works at or near any of the stations on the above line of railway, that they can be supplied upon the shortest notice with Bricks, Tiles, Lime, Cement, Sand, Plaster, Drain-pipes, Fire-goods, and all other building materials of the best quality at the lowest market prices.

N B. Orders received overnight can be delivered by the early morning trains.

BRICKS.—KENT GREY STOCKS on SALE. Also PATENT PERFORATED, and SOLID WHITE SUFFOLK FACINGS—Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newingtons, will, from MONDAY, the 11th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1834.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE.

TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen in full operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

The great advantages possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be hacked up in rank before leaving the machine, which is entirely self-acting, consequently requires only the labour of feeding and carrying off.

Applications, either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Bordesley, Birmingham; or to J. F. OATES, Inventor and Patentee, Lichfield.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

TO BRICKMAKERS, EMIGRANTS, AND OTHERS

TO BE SOLD, cheap, a CLAYTON'S PATENT TILE, PIPE, and HOLLOW BRICK MACHINE, dies, &c. complete, for both horizontal and vertical principles of making, and in perfect working order.—For particulars, apply, pre-paid, to J. MORGAN, Architect and Surveyor, 35, Nicho as lane, City.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, 8, Rathbone place.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE—

No. 3	4	5	6
5s. 3d.	6s. 6d.	8s.	9s. 9d. per gross.

At JOHN YOUNG'S, Birmingham and Wolverhampton. Agent, Factor, and General Ironmonger, 18, Blandford-street, Manchester-square; running out of Baker-street, Portman-square. Every other article equally reasonable.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, elaborate or simple, Gothic, Elizabethan, pendentive or flat, Louis XIV. in much variety, and to any degree of cost; Italian and Greek, Renaissance, and many modified characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Friezes, cornices, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the trade of each. The general decorations of Drawing and Dining Rooms, Libraries, &c of very considerable extent, as furniture, glass frames, tables, window cornices, screens, candelabra, and the whole range of accompaniments to reception-rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

New edition, 12mo with Woodcuts, price 2s; Key, 3s 6d.

EXERCISES on MECHANICS and NATURAL PHILOSOPHY; or, an Easy Introduction to Engineering, for the Use of Schools and Private Students.

By THOMAS TATE,

Of Kneller Training College, Twickenham.

Sequel to the above, 12mo with Woodcuts price 10s 6d.

TATE'S PRINCIPLES of MECHANICAL PHILOSOPHY applied to INDUSTRIAL MECHANICS.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

"NEW AND CHEAPER EDITION

The Third Edition, in 8vo, price Two Guineas.

GWILT'S ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical: Illustrated with more than 1,000 Engravings on Wood, by R. BRANSTON, from Drawings by J. S. GWILT. With a Supplement on Gothic Architecture

London: LONGMAN, BROWN, GREEN, and LONGMANS.

PESCHEL'S WORK ON NATURAL PHILOSOPHY.

In Three Vols. foap 8vo. with Woodcuts, price 21s.

ELEMENTS of PHYSICS.

By C. F. PESCHEL,

Principal of the Royal Military College, Dresden.

Translated from the German, with Notes, by E. WEST.

Vol. I. contains the Physics of Ponderable Bodies, 7s 6d.

Vols. II. and III. Imponderable Bodies, price 13s 6d.

"We trace the hand of a master, who has placed before his readers in the most lucid order, those branches of science in their modern improved state. The work is a little encyclopædia of physical science, and we heartily recommend it as a work by which the public will benefit."—*Philosophical Magazine*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

New Edition, in 12mo with Woodcuts, price 3s. 6d.

PRINCIPLES of GEOMETRY, MENSURATION, TRIGONOMETRY, LAND-SURVEYING, and LEVELLING: containing familiar Demonstrations of the most important Propositions in Euclid's Elements; and Proofs of all the useful Rules and Formulæ in Mensuration and Trigonometry, with their application to the Solution of Practical Problems in Estimation, Surveying, and Railway Engineering. Designed for the use of Schools and Private Students.

By THOMAS TATE, F.R.A.S. of Kneller Training College, Twickenham.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW EDITIONS OF NESBIT'S MENSURATION, LAND-SURVEYING, &c.

A New and Improved Edition, augmented by a Treatise on Levelling, in 12mo. price 6s. bound,

A TREATISE on PRACTICAL MENSURATION, in Ten Parts containing—

The most approved Methods of drawing Geometrical Figures.

Mensuration of Superficies.

Land-Surveying.

Mensuration of Solids.

The Use of the Gunter's Scale.

Timber Measure, in which is shown the Method of Measuring and Valuing Standing Timber

Artificers' Works, illustrated by the Dimensions and Contents of a House.

Mensuration of Haystacks, Drains, Canals, Marlpits, Ponds, Mill dams, Embankments, Quarries, Coal-heaps, and Clay-heaps.

Conic Sections and their Solids.

The most useful Problems in Gauging, according to the New Imperial Measures.

Plane Trigonometry, with its Application to the Mensurat on of Heights and Distances.

Trigonometrical Surveying.

A Dictionary of the Terms used in Architecture.

By A. NESBIT.

New Edition, enlarged, and carefully improved. To which is added,

A TREATISE on LEVELLING. The whole illustrated by nearly Seven Hundred Practical Examples and nearly Three Hundred Woodcuts.

KEY to NESBIT'S PRACTICAL MENSURATION: containing Solutions to all Questions which are not answered in that work; with References to the Problems, Rules, and Notes, by which the Solutions are obtained. New Edition, corrected and greatly improved. 12mo. price 6s bound.

By the same Author, New Edition, 8vo with Plates, Woodcuts, and Field Book, price 12s.

TREATISE on PRACTICAL LAND-SURVEYING. Corrected and improved, with the addition of Plane Trigonometry, including the use of the Theodolite, and Railway Surveying, Railway Engineering, Levelling, Planning, Laying out Curves, &c. By T. BAKER.

TREATISE on PRACTICAL ARITHMETIC. Part I. 5s.; KEY, 5s. Part II. 7s 6d; KEY, 7s.

INTRODUCTION to ENGLISH PARSING. 18mo. 2s 6d.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 1 vol. 8vo with 189 Wood Engravings, price 28s.

FOOD and its ADULTERATIONS; comprising the Reports of the Analytical Sanitary Commission of the *Lancet* for the years 1851 to 1854 inclusive, recording the results of several Thousands of Analyses of the Solids and Fluids consumed by all classes of the public; also Lists of Names and Addresses of the various Merchants, Manufacturers, and Tradesmen of whom the Analysed Articles were purchased.

By A. H. HASSALL, M.D. &c Chief Analyst of the Commission; Author of "The Microscopical Anatomy of the Human Body."

Illustrated by woodcuts, showing the minute structure of the greater number of the Vegetable Substances employed as articles of Food, also the majority of the Substances used for Adulteration.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In foap 8vo. price 10s. each, cloth; 13s. roan; or 12s. 6d. calf.

MAUNDER'S SCIENTIFIC and LITERARY TREASURY; or, Popular Encyclopædia of the Belles Lettres, considered in form, familiar in style, and copious in information, including all Branches of Science, and every subject connected with Literature and Art. Also, all uniform in size, price 10s each Treasury,

MAUNDER'S HISTORICAL TREASURY;

MAUNDER'S BIOGRAPHICAL TREASURY;

MAUNDER'S TREASURY of KNOWLEDGE; and

MAUNDER'S TREASURY of NATURAL HISTORY.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

The Sixteenth Edition, revised and corrected, in 2 vols. foap. 8vo. price 14s cloth,

CONVERSATIONS on CHEMISTRY; in which the Elements of that Science are familiarly explained and illustrated by Experiments.

By JANE MARCET.

"In the present edition the author has attempted to give a sketch of the principal discoveries which have recently been made in Chemistry; and wishing that her pupils should obtain some knowledge of the progress which has taken place in Agriculture, resulting from its connection with Chemistry, she has found it necessary to add a Conversation upon this subject."—*Extract from Preface.*

By the same Author, New Editions of

CONVERSATIONS on LAND and WATER, Map, 5s. 6d.; on VEGETABLE PHYSIOLOGY, Plates, 9s.; on NATURAL PHILOSOPHY, Plates, 10s. 6d.; on POLITICAL ECONOMY, 7s. 6d

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In One Volume, 8vo. with Woodcuts, price 60s. cloth; or 3l. 5s. half-bound in Russia, with flexible back,

BRANDE'S DICTIONARY of SCIENCE, LITERATURE, and ART. Second Edition, corrected; with a Supplement, containing many Additions, with the chief Scientific Terms, Processes, and Improvements that have come into general use since the publication of the first edition.

"Professor Brande's valuable dictionary has reached a second edition; and is rendered still more valuable by a supplement, which extends the original 1,344 pages to nearly a hundred more, in which some of the latest discoveries are very fully treated of."—*Examiner.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

A New Edition, in 2 vols. 8vo. with 6 Maps, price 63s.

M'CULLOCH'S GEOGRAPHICAL, STATISTICAL, and HISTORICAL DICTIONARY of the WORLD

"The present is an improved edition, with additional information, made necessary by late changes. The articles 'Australia,' 'Russia,' and 'Turkey,' with others of less importance, have been re-written. The present improved edition will be acceptable to all readers of newspapers, who now meet for the first time with the names of numerous places in the East of Europe, especially in those great empires of which in this edition the description has been entirely re-written."—*Economist*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE ABBE HUCS NEW WORK ON CHINA.

In 2 vols. 8vo. with a coloured Map, price 24s.

THE CHINESE EMPIRE.

By the ABBE HUC,

Many years Missionary Apostolic in China.

Copyright Edition translated with the Author's sanction.

"His volumes teem with new information, and contain one of the best pictures of China we have met with since the days of Du Domenian pleasure. His description is real and picturesque. It unfolds the life of China; it displays the character of the people, and evinces a thorough knowledge of Asiatic history and manners."—*Atlas*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

On the 31st instant, price 3s. 6d. cloth; or in two parts, One Shilling each.

CORNWALL: its MINES and MINERS: with Sketches of its Scenery.

By the Author of "One Year Over Old Pits."

Forming Parts 74 and 75 of the "Traveller's Library."

London: LONGMAN, BROWN, GREEN, and LONGMANS.

TATE'S NATURAL AND EXPERIMENTAL PHILOSOPHY. The Set complete, in 2 vols. 18mo. price 7s. cloth, or in 7 Parts, price One Shilling each.

AN ELEMENTARY COURSE of NATURAL and EXPERIMENTAL PHILOSOPHY, for the USE of BEGINNERS: in which the Principles of the Physical Sciences are familiarly explained and illustrated by many Experiments and Diagrams.

By T. TATE, F.R.A.S.

Forming a portion of the Rev. G. R. Gleig's new School Series, and to be had separately, as follows:—

MECHANICS and the STEAM-ENGINE. One Shilling.

ASTRONOMY for BEGINNERS. One Shilling.

HYDROSTATICS, HYDRAULICS, and PNEUMATICS. One Shilling.

LIGHT and HEAT. One Shilling

ELECTRICITY for BEGINNERS. One Shilling.

MAGNETISM, VOLTAIC ELECTRICITY, and ELECTRO DYNAMICS. One Shilling.

EXPERIMENTAL CHEMISTRY. One Shilling.

Also by Mr Tate, in Gleig's School Series,

FIRST THREE BOOKS of EUCLID. One Shilling

London LONGMAN, BROWN, GREEN, and LONGMANS

NEW WORK BY MRS. JAMESON.

In square crown 8vo with Etchings and Woodcuts, price 18s.

A COMMON-PLACE BOOK of THOUGHTS, MEMORIES, and FANCIES, Original and Selected

By Mrs JAMESON, author of "Sacred and Legendary Art."

"A more suggestive and charmingly meaning of materials for thought we have not looked into for some time."—*Builder.*

"The work, which, like all Mrs Jameson's late productions, is rich in artistic beauty, etchings and woodcuts alike redolent of grace, is destined to extend still more widely the reputation of the authoress as one who thinks deeply and writes wisely."—*Notes and Queries*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

GIOTTO, and his WORKS in PADUA (being an explanatory notice of the series of wood engravings executed for the Arundel Society, after the frescoes in the Arena Chapel)

By JOHN RUSKIN Part I.

N.B In consequence of the numerous applications for the Essay, contributed by Mr Ruskin, to the fifth year's publication of the Society, the Council have resolved to sell it to the public generally, without the wood engravings comprised in the issue to the subscribers.

Published at the Office of the Arundel Society, 24, Old Bond-street; and to be obtained through any Bookseller) of Messrs. BELL and DALDY, Fleet-street.

JOHN NORTON, Secretary.

A COLOSSAL STATUE of LORD VISCOUNT NELSON, sculptured by WILLIAM MILLIGAN, will be exhibited FREE, for a few days, previous to its removal to the Isle of Dogs, at No. 30, FRANCIS-STREET, Tottenham-court-road.

TO ARTESIAN WELL-BORERS AND OTHERS.

NOTICE is hereby given, that the Government of Trinidad is prepared to guarantee the payment of 2,500l. sterling, as a REWARD to any person or company who will bring to the surface of the ground, within the limits of the town of San Fernando, by the process of the Artesian well, potable WATER, in a sufficient quantity for the supply of the inhabitants of the same, such sum of 2,500l. sterling to be repaid by local charges on property in San Fernando.

CHEAP FUEL.—GAS COKE, as used in the Royal Conservatories, admirably adapted for furnaces (as producing no smoke), and also well suited for household fires, to be had at 2s. per chaldron in quantities of not less than twenty chaldrons, cleared by barge or carts within a week from the Phœnix Gas Works, Bankside, Southwark, or at the Bridge Foot, at Vauxhall. Two chaldrons delivered within a mile of the Works on the Surrey side of the Thames at an additional charge of 2s. per chaldron. A smaller quantity on delivery at a greater distance at a moderately increased rate.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the Stone and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

The Builder.

SATURDAY, JANUARY 27, 1855.

We have before us Mr. Muirhead's new book on Watt and his Mechanical Inventions.* James Watt, the developer of the powers of steam,—the magician, by the play of whose iron rod the unprecedented manufacturing and naval steam powers of this country may be said to have been evoked,—was born at Greenock—the Gravesend of Glasgow,—upwards of a century since; and even from his childhood, like not a few others destined to scientific greatness, appears to have been cut out, as it were, for the work he had to do; the main bent of his life, it may have been, having assumed form and consistency from one of the first efforts and gratifications of his peculiar mechanical talents, while yet a child; since it is recorded, and has been specially remarked by M. Arago and others, that one of his boyish speculations actually consisted in the *condensation of steam in a separate vessel*. His call to be a mechanical philosopher, too, as a living relative, Mr. Muirhead, also thinks, may have been all the more impressed on his mind by the presence, in his father's house, of somewhat notable portraits of Napier and Newton. True it is, at all events, that he early began to show that he was "no common child." Ill health and homely tuition, moreover, may have helped to induce habits of quiet and solitary meditation.

Watt's mind appears to have begun early to yearn after wider fields of experience than his own humble birthplace afforded; and he soon found his way from Greenock to Glasgow, and from Glasgow to London, where he was further prepared for his important destiny, by learning the art of mathematical instrument making; after which he returned to Scotland, and being (fortunately, doubtless, there as well as in the City of London) prevented from setting up in business on his own account, not being a freeman either in the City of Glasgow or in that of London, he was glad to embrace the opportunity which a very humble opening at first presented him of doing something for himself in the way of his business as a mathematical instrument maker, under the *quasi* sanctuary of the Glasgow University, whence no city corporation or its freemen could expel him. The little incident which occasioned his first introduction to this seat of learning is modestly described by himself in a letter to his father, dated 25th October, 1756, in which he says, "I would have come down [to Greenock] to-day, but that there are some instruments that are come from Jamaica that Dr. Dick desired that I would help to unpack, which are expected to-day." Now, it is a singular circumstance, we cannot but think, that Watt,—already a most original and inquisitive mechanical genius,—a "queer lad,"—a curious boy,—thus was placed, by apparently the most fortuitous and trifling circumstance, in a position where, shortly afterwards, the now celebrated, but in itself primitive and faulty, model of Newcomen was presented to him by the University authorities "for repair," and where he also, about the very same time, became intimately acquainted, and associated in scientific friendship, with the discoverer of latent heat, the celebrated Dr. Black, who, in that very year, was appointed professor of anatomy, and lecturer on chemistry, in that very college! And that there too, through Dr. Black himself, Watt was introduced to the practical originator of the manufacture of iron by means of coal in place of charcoal, namely, Dr. Roebuck, who, moreover, assisted pecuniarily in the development of Watt's grand idea, until he was handed over, as it were, by Roebuck, to Boulton, Birmingham, and universal fame. Who will say there was not a special disposal of events and circumstances here? Dr. Black's discovery was an essential element in Watt's calculations as to the capabilities of steam. Dr. Roebuck's was an essential preliminary to that vast multiplication of "Watt's Fire-engine," as it was called, and its multitudinous manufacturing and other purposes, which have since made this country the world's workshop and its centre of mechanical power.

Dr. Black, in a MS. narrative, never, it is believed, quoted or noticed by any biographer of Watt except Mr. Muirhead in his recent work, thus describes the germ, as it were, of the grand inspiration of Watt's life:—

"It was in the beginning of the year 1765, that the fortunate thought occurred to him of condensing the steam by cold in a separate vessel or apparatus, between which and the cylinder a communication was to be opened for that purpose every time the steam was to be condensed; while the cylinder itself might be preserved perpetually hot, no cold water or air being ever admitted into its cavity. This capital improvement flashed on his mind at once, and filled him with rapture."

Watt himself even indicates the very spot where this "rapture" so suddenly inspired him. On being asked, in 1817, if he recollected how the first idea of his great discovery came into his mind, the old man instantly replied,—

"Yes, perfectly. One Sunday afternoon I had gone to take a walk in the Green of Glasgow [where many a one besides Watt has meditated amongst its trees or beside its *pearl-yielding* Clyde waters, or by night in the strange glare of its neighbouring ironworks], and when about half way between the Herd's House and Arn's Well, my thoughts having been naturally turned to the experiments I had been engaged in *for saving heat* [*latent* in or constitutional to the state of steam, and absorbed from the fire, as Dr. Black had taught him to believe] in the cylinder, *at that part of the road* [and Sunday as it was, when the mind of young graceless, as his revered and kirk-going father might perhaps have said at the time, should have been not "naturally turned" or inspired, but spiritually], the idea occurred to me that as steam was an elastic vapour, it would expand and rush into a previously exhausted space; and that if I were to produce a vacuum in a separate vessel, and open the communication between the steam in the cylinder and the exhausted vessel, such would be the consequence."

This interesting little detail reminds us of Galileo's observation of the pendulum, while in the cathedral at Pisa, where, in place of being engaged in devotional exercises, he happened to be gazing vacantly upwards at a lamp which swung from the roof, and which instantly inspired his mind as it were with the idea of continued pendulations in equal times.

Poor as Watt then was, this was doubtless the very happiest moment throughout a long life, seared by what he bitterly, and but with too much truth, complained of in after years as the "villanies," the "rascalities," of his fellow men,—the Hornblowers, Bulls, and others who lived upon his laborious thoughts, and vexed his soul with law-suits and slanders. Watt, however, was a man of far too practical and matter-of-fact a kind not to "mind the main chance," as some of his countrymen would say. The turning of his various inventions to profit ever occupied his attention, co-ordinately with his more disinterested scientific thoughts. Even after he had been taken by the hand and into partnership by his staunch and far-seeing business friend, Boulton, it was not a few weary years ere fortune really smiled upon the co-partners. The introduction of the improved engine into Cornwall, its most promising field at that time, seems to have been a sickening business to Watt, who had to go personally to the district, and hammer his ideas into thick skulls—a poor exchange, in his opinion, for the intellectual pleasures of the "Lunar Society," with its Darwin, Priestley, *et hoc genus omne*, and the hospitable society of Soho and its vicinity. How little the real merits of machinery were appreciated by those among whom he had thus to labour, and how much indeed "Watt's fire-engine," in its maturer forms, was needed at that time, appears from an amusing description he has given even of one of the first of his own engines there erected. "The velocity, violence, magnitude, and horrible noise of the engine," he says, writing to his copartner, Mr. Boulton, "give universal satisfaction to all beholders [and auditors, he should have added], believers or not. I have once or twice trimmed the engine to end its stroke gently and make less noise, but Mr. —— cannot sleep unless it seems quite furious, so I have left it to the engine-man. And by the bye, the noise serves to convey great ideas of the power to the ignorant, who seem to be no more taken with modest merit in an engine than in a man." As for "the engine-man," Watt complains that "he actually ate the grease for the engine."

At this very time, or rather before it, an offer was made him, which might have immensely affected the destinies of this country, and might have even reversed our position with relation to Russia, and have rendered the probability of a Russian steam invasion, at this moment, of our own less well protected shores, by no means preposterous. Mr. Boulton, honest man, had been "sounding the praises" of his gifted coadjutor at the Russian Ambassador's, and the very speedy result, at that critical moment (the spring of 1775), was an offer of employment, with 1,000*l.* a year, under the Russian Government. Mr. Boulton was "staggered," "repented" his rashness, expatiated on the "dangers of so long a voyage or journey," and kindly reminded the bear-hugged philosopher of "the precariousness of your health." "Lord! how frightened I was," exclaimed Dr. Darwin, "when I heard a Russian bear had laid hold of you with his great paw, and was dragging you to Russia! Pray *don't* go, *if you can* help it. Russia is like the den of Cacus: you see the footsteps of many beasts going thither, but of few returning. I hope your fire-engines will keep you here." Well it was for his then thankless and almost unconscious country that his fire-engines did keep him here. Had the offer not been only just a little "*trop tard*," the empire of the Russ, and not of the Briton, might have been at this moment the great steam engineering centre of the world. Nor was this the only opportunity which Russia seized, as if to the full extent conscious of the immense importance of such an endeavour to get ahead of us. A previous attempt to engage Watt's services on behalf of Russia had been made in 1773—two years before—through his friend, Dr. Robson, late of Edinburgh, but then of Russia. Again, even so long afterwards as 1816, Nicholas himself, then Grand Duke, actually applied *in vain* at the Soho works for permission only to view the interior, his application backed by a letter from Lord Sidmouth, of which the great Nicholas was the humble bearer! *There were certain persons in his suite who had other objects than merely to "view the interior!"* Cunning and unscrupulous then as now! In 1775, Watt, it is verily believed, would have actually seized the opportunity of earning so handsome a salary as 1,000*l.* must have then been to him, had it not been that he was alarmed by the hint that Captain Perry, another engineer, whom the

* "The Origin and Progress of the Mechanical Inventions of James Watt; illustrated by his Correspondence with his Friends and the Specifications of his Patents." By J. P. Muirhead, M.A. In three volumes. London: Murray, Albemarle-street. 1854.

Czar Peter had engaged, had to fly for refuge to the British ambassador, and to return to England without receiving the pay due to him. Watt therefore decided to prefer to such "despotic predilections" the to him more secure, and to us more fortunate destiny of "a crust of bread and liberty."

James Watt, as is well known, was the author of many other inventions besides those connected with the steam-engine, in themselves a host.*

He had actually suggested the marine screw-propeller, one of the newest adjuncts to his own admirable engine. His friend, Dr. Small, having mentioned to him in 1770, the desire which Mr. Boulton (not then a partner of Watt) entertained of moving canal boats by help of the steam-engine,—"Have you," said Watt, in his reply, "ever considered a spiral oar for that purpose, or are you for two wheels?" The contradistinction between two wheels and one oar, plainly implies the idea of substituting the screw for the tapering oar at the stern of the boat. Mr. Muirhead, who first brings this fact before the public, instances it very justly as one of the many extraordinary proofs that Watt's genius and sagacity were far ahead of his age; but he is wrong in supposing, as he appears to do, that Watt was thus the first projector or originator of the screw as applied to ships; for it is known that in China, from time immemorial, the screw has been so applied, a fact, however, doubtless quite unknown to Watt.

Even in his early youth, so fertile, so varied, and so brilliant was the admitted mechanical and inventive genius of Watt, that, although he was well known, among his acquaintances, to have "by nature, an absolute deficiency of all musical ear," as well as a total want of all experience or education in organ building, some of these very acquaintances, who formed a Masons' Lodge at Glasgow, and wanted an organ, applied, with the utmost confidence, to Watt to make them one, as he was up to anything! And Watt did make the organ according to order, although, when he began, he did not know one musical note from another; and not only did he make a good job of it apparently, but in the course of his preliminary experience "a thousand things occurred to him which no organ builder had ever dreamed of,—nice indicators of the strength of the blast, regulators of it, &c. &c." and he mastered the theory of the beats of imperfect consonances, so as to tune the organ himself though devoid of ear, and to the delight and astonishment of the best performers; invented a real monochord of continued tone, and made an observation, while playing with this, which it is alleged would have terminated a dispute between the first mathematicians in Europe,—Euler and D'Alembert,—and which completely established the theory of Daniel Bernouilli, who differed from both about the mechanism of the vibration of musical chords, and as completely overturned the theories of Rameau and Tartini.

The perspective drawing machine was another invention of Watt's, of date about 1765. He invented the micrometer for measuring distances; and, indeed, he acted practically as a civil engineer, having made a chart of the Clyde, and surveys for the Forth and Clyde, Monkland, and other canals, and even produced the first survey for the great Caledonian Canal across a chain of lakes in the north of Scotland, and of which Telford, in his subsequent survey, acknowledged that he made good use. He invented the copying machine, for which and other improvements, he took out successive patents. He specified in his patent of 1784, improvements in the principles and construction of steam-engines for wheeled carriages, and a working model of a locomotive engine was actually made by one of his subordinates, Mr. Murdock. Watt's mission, however, was mainly to set the improved steam-engine agoing; and although he foresaw at least its possible utility in locomotion, both by land and sea, he had not the means or opportunity of doing more than merely bringing the engine itself into use, for fixed or local purposes. True, he was in the habit of expressing doubts about the probability of using locomotives at least on common roads, but a letter *to* Watt from one of his own friends, Mr. Edgeworth, may afford us a glimpse into his own private, innermost, and most speculative thoughts. "I have always thought," said Edgeworth, "that steam would become the universal lord, and that we should in time scorn post-horses. An iron railroad would be a cheaper thing than a road on the common construction." This, however, was not written till 1813, but it was even then a clear prophecy of times to come.

In 1785, Watt had turned "some of his idle thoughts to an arithmetical machine,"—a grand idea, but too much seemingly even for a mono-theorist, if we may judge by the void result of Mr. Babbage's life-time efforts. This was by no means a mere vague speculative idea of Watt: he did much to mature his idea to a certain extent, though not to realise it into an actual machine.

Watt's inventions began with rough power, they appropriately ended with refined art. One of his latest occupations in life, consisted in the gradual perfectment of a machine for making solid copies of statues or other sculptures, a most ingenious invention, the idea of which was suggested to him by an implement he had seen and admired at Paris, in 1802, where it was used for tracing and multiplying the dies of medals. This new machine was to do for solid masses, and in hard materials, wood, ivory, soft stone, and even marble, what his copying machine of 1782 had already done for drawings and writings on flat surfaces of paper. In 1808, its construction was considerably advanced, so that his glyptic machine, as he then called it, had become polyglyptic, or capable of cutting two or more copies at once, though "still far short" of his ideas; but in 1818 he had not only completed this favourite occupation of his old age, but was on the very eve of patenting the invention, when he felt the hand of death upon him, and in that very year he died, after having exhibited the machine to some favoured friends, and so prevented the appropriation of it by others to their own exclusive patented benefit, but leaving it, as it were, a legacy to society.

The work mentioned at the commencement of this notice, is a highly interesting one. The first volume of it is mainly devoted to a memoir of Watt; the remainder of that volume, and the whole of the next, to his correspondence; and the third volume to the specifications, &c. of his patents. The form of the whole work is more expensive than it ought to have been; but doubtless there will be other editions in course of time, which will bring it into more general distribution than the present may obtain.

The author of the memoir writes most affectionately of the subject of his notice, and calls him, as Plato did another sage, "The most virtuous, the most wise, and the most just." He does not forget to record the statue erected in Westminster Abbey by the nation, not merely, as Lord Brougham has said, "to perpetuate a name which must endure while the peaceful arts flourish; but to show that mankind have learned to honour those who best deserve their gratitude;" and he refers with satisfaction to the medal struck by the Art-Union of London in honour of Chantrey (*sculptor et artium fautor*), which bears on the reverse his monument to JAMES WATT.

* Though not to be classed among his *inventions*, albeit Dr Black's discovery of latent heat is by Watt himself called an invention, we must not fail to note his discovery of the composition of water, once attributed to Lavoisier and Cavendish, but by the verdict of such a scientific *jury* as Davy, Henry, Arago, Brougham, Dumas, Berzelius, Brewster, and Liebig, finally ascribed to Watt.

REVIEW OF THE PLANS FOR THE DRAINAGE OF THE METROPOLIS NOW UNDER CONSIDERATION.*

CONTINUING our remarks upon the salient points in the schemes and evidence now before the Commission, attention should be directed to the opposite treatment of two sections of the northern area, namely, drainage *out* of the areas to Barking-creek, and drainage within the area as by Chelsea. Eighteen square miles of drainage converge to a sumpt near Chelsea, by means of two enormous parallel sewers, because the level of the district is so low that it is impossible to obtain any other natural means of drainage than into the river as at present. At the same time it is proposed to send the drainage of sixty-five square miles (forty-one north and twenty-four south) from areas equally low in large tracts, from Chelsea near to the commencement of the sumpt system; and from points on the south side beyond the sumpt miles to the east to Barking and Deptford Creeks.

Sir William Cubitt would have all the sewage go into the Thames,† and would show the gentlemen who are so anxious to turn it into valuable manure, that "there is a means of doing it out of the fifty sewers at a little distance back far better, and, in his opinion, much cheaper than they could work this great thing (the tunnel sewers), which they talk about, but will never do." "All people who go in extremely large steps at one time must, he thinks, occasionally fail." He should recommend that at every one of the fifty main sewers an establishment should be erected, by means of which they would work more certainly and more economically, and would get rid of all the rainfalls easier than by this large thing which they talk about doing. "You quite mistake me," he says, "if you think I have come here against saving the manure and making it available."

It is proposed now to notice some points in Messrs. Bazalgette, Stephenson, and Cubitt's review of Mr. John Roe's scheme, or rather their confirmatory observations in favour of their own schemes, "approved of by us in our former reports," in contrast with it.

Messrs. Stephenson and Cubitt object to Mr. Roe's datum of 31,000 inhabitants per square mile:‡ they call it a serious error, affecting the capacity of his middle level line; for, say they, the population is from 80,000 to 100,000. In an important part of Mr. Roe's plan, "which proposes to deal with the interception from an area of 28 square miles, out of a total of 41, through the middle intercepting sewer alone," Messrs. Bazalgette and Haywood's tables, accompanying their Report of Jan. 21, 1854, will on this point (as Sir William Cubitt says, speaking in terms of general approval) "well repay the perusal."

In the three tables, the heading of the column governing their sizes (as to prospective population) is uniformly thus "prospective number estimated at 30,000 per square mile." So that the very proof of error is an emphatic condemnation by themselves of the accuracy of their own tables. The figures under this heading are certainly widely at variance with the heading in many cases, the three main lines giving the following results:—

	Present Number.	Prospective Number estimated at 30,000 per Square Mile.
	Per Square Mile.	True Number per Square Mile.
Table 1. Northern High Level, or Hackney-brook...	6,575	29,682
,, 2. Middle Level	48,388	57,157
,, 3. Main Low Level	58,636	61,550
		Prospective Number.
Summary of Table (including these lines only).....	37,055	49,102

But neither in the case of the present nor of the prospective population do these (averaged) tables bear out Messrs. Stephenson and Cubitt's implication of Mr. Roe's middle level "dealing with the interception from 28 square miles" being inadequate for its work, through its wrong basis of 31,000 instead of 30,000 to 100,000 per square mile. They seem to ground their deductions on isolated sections of the area dwelt with, giving *maximum* results; whilst they wholly suppress the important facts that one-fourth of Mr. Roe's middle level area has an average present population of only 6,575 per square mile (Table No. 1); and that the mean present population of the whole metropolitan area treated by Mr. Roe is only 37,055 per square mile. (Summary of Tables.)§

Assuming Mr. Roe to have erred by deduction

* See p. 28, *ante*.
† Evidence, 3414.
‡ Rep rt. Dec. 11, 1854, pp. 27, 28.
§ Report, Jan. 21, 1854.

from a minimum datum (Messrs. Bazalgette and Haywood's tabulated heading), the Commissioners' acting and consulting engineers may certainly take credit for being on the safe (?) side, when they increase the inhabitants of fields and bleak waste, from a rate of 366 per square mile, to a rate of 30,000 per square mile, or more than eightyfold,* propound a scheme for two or three main lines, for the suburban district of which it forms a part, which no amount of rate collectable from it, in its present condition, could ever repay.

The reporters say that "the above conclusions will afford sufficient explanation of the data upon which the sizes of our intercepting sewers are calculated. The *details are given in Appendix A.*" Appendix A. constitutes the tables.

Mr. Stephenson says, "With reference to the dimensions of the proposed sewers, I have not been able to go into the details of the calculations, but having examined the *tabular* statements attached to the engineers' report, and having received explanations from them respecting the directions of the flow in the various sewers intended to take place, I have every confidence in the correctness of their conclusions."†

Some doubt must be felt as to the value of these tables professing to be amplifications of the report, when we find these startling anomalies in three main lines;—a 12 feet 6 inch sewer falling 1 in 1,359, taking less than a 9 feet 6 inch sewer, falling 1 in 3,520; and taking one third less than a 10 feet sewer, falling 1 in 2,640, under precisely the same heading of "Rainfall per minute, and maximum sewage per minute added together."

Messrs. Stephenson and Cubitt‡ strongly object to the limitation of Mr. Roe's Hackney-brook scheme, because it does not relieve any other existing outlets into the Thames; because it is simply a district sewer for an area which has hitherto never drained into the Thames, through London; because it does not extend, as does Mr. Bazalgette's and their schemes, towards Kilburn. "The omission [they say] of the extension of the Hackney-brook sewers, towards Kilburn, we cannot help thinking *is a fundamental error*, for it throws the entire drainage of the northern district of the metropolis into the middle intercepting sewer, which ought to be kept down in dimensions as much as possible."

Mr. Stephenson, the consulting engineer of the Commissioners of Sewers of to-day, curiously enough, in this condemns Mr. Stephenson, the Commissioner of Sewers, 1850-1; for Mr. Forster's scheme approved, and in part designed by him, is certainly obnoxious to this "fundamental error."§ But after all, everything about this extension, shows its indefinite character. Its route is dotted on the plan. The tables, showing in all other cases these particulars with minute precision, fail to give the length, the rate of inclination, and the size of the sewer; and Mr. Stephenson's very argument in the sequel would point to its fixity as an afterthought.

With a view to add force to their objections to Mr. Roe's 4-feet lower outlet, they say, basing their arguments upon Mr. Forster's‖ experiments in 1851, in the tidal flow, "But in discussing this part of the question, we cannot feel justified in disregarding Greenwich and its populous neighbourhood." The force of this care for the verge of populated London; of this fear, lest the sewage of the north side of London, discharged, as they say, some 4 feet lower than they would go, and under high water for some short period, some six or seven miles below Greenwich, should chance to flow up the river and reach this devoted town, are somewhat impaired by contrast with their own scheme for the south side, in which they propose to send some 24 square miles of foulest drainage of more than half a million of people, and innumerable noxious factories, into the very heart of this very town of Greenwich.¶

Mr. Roe's syphon under the River Lea, is objected to, because, say they, it will probably be converted at times into an accumulator and receiver, and how do the reporters themselves propose to pass the Lea near this point?

With remarkable explicitness, they say, "Thence it (the Hackney Brook Sewer) crosses under the East and West India Dock Railway, along Albion-road, West-street, and through the Victoria-park, and under Sir George Duckett's Canal, up *to which point it is kept up to such a level that it may be carried over or under the river Lea navigation.*" And, again, "*This sewer is kept at such a level (for the purpose of being carried over or* UNDER *the river Lea,* and discharging at high water by gravitation) that a portion of the drainage of the Hackney marshes cannot be turned into it."*

Now this passage under the river surely involves a syphon? one seemingly as long, from the position which they have chosen, as that objected to. Mr. Roe gives the aqueduct alternative; and the *only* discoverable point of difference between Mr. Roe and Messrs. Bazalgette, Stephenson, and Cubitt, is that the reporters, in their previous reports, give the syphon alternative. In point of fact, it resolves itself into a mere transposition of words, with this distinction, that the reporters are indifferent upon the subject, while Mr. Roe attaches some value to the syphon alternative.

Mr. Stephenson looks upon tunnel sewers, under certain conditions, as syphons. Before the committee he started a most serious objection to their use, one with which, as he himself said, he did not know how to grapple. He thought that when floods gorged them, and overpowered the pumps, the velocity of current in them would be so much reduced as to cause their silting up, because at such times they would become reservoirs.† This argument was upon a tunnel falling 4 feet per mile: his own tunnel, on the north side, falls (for the last 3 miles) at the rate of 1½ foot per mile, with a mean velocity of current, *when fully charged*, of very little more than 1½ mile (1·65 mile) per hour. He seemed to think that a velocity of 2 miles per hour would be insufficient to prevent this silting up, a velocity nearly one-fourth more than the natural velocity in his own tunnels, with the discharge and lift in equilibrio. In proportion to the gorging of the tunnels by floods creating a disturbance of the balance, so must they assume all the characteristics of a syphon, varied only by the number of inferior orifices through which they pour or syphon their contents, many feet above their own level, into the Thames, either directly by special branches, or mediately, through suitable tributaries.

This syphonic action would take place upon every addition to the assigned ½-inch rainfall in the twenty-four hours.‡ This may be for thirty-three days or thirty-nine days in the year, as in 1853 and 1852; assuming with the reporters the equal distribution and discharge of the fall within *their* period. But as rains fall *generally* in much shorter times and at greater rates, the view taken of the action of the tunnels is by no means the least favourable one. Of course all tunnels having insufficient power to meet *storm* discharges are open to the same objection; but it should seem that those are least so, or at all events least fatal in their effects, which drain the smallest areas and have the greatest falls.

Whilst upon this subject it may be as well to consider how the designers of the main drainage, in their original reports and in their reviews of Mr. Roe's schemes, provide for the exigencies of storms. Would they always keep up sufficient steam to meet storms, always of uncertain advent, or would they wait for storms? Of course they must have a maximum *establishment* to meet these cases, so that they could save only in the coals, &c. and in the less depreciation of the spare engines.

Messrs. Stephenson and Cubitt say, "The high level (Hackney-brook sewer, as already explained) must act as a *drainage* sewer for 7 square miles, and remove the sewage and a portion of the storm waters from another 7 square miles."§

Mr. Bazalgette, on the contrary, in his report of 1st October, 1853 (approved by Messrs. Stephenson and Cubitt), expressly says, "that it will divert the *whole of the sewage and flood waters of* 14 *square miles* of the upper districts from the low districts, and from the river Thames." Again he says, this time reporting with Mr. Haywood,‖ "The northern high level gravitating sewer, reported upon lately by Mr. Bazalgette, being intended for an intercepting sewer, and at the same time as a main *drainage outfall*, capable of performing *all* the functions of such a *calculated to carry off all the sewage as well as the rains, including storm waters, likely to pass into it from the area drained by it.*" And again on 30th October, 1854, he says, "This sewer *would drain* 14 *square miles altogether*" (p. 18).

Messrs. Stephenson and Cubitt's reports of 1st and 8th October, 1853, will sufficiently show their approval of Mr. Bazalgette's views.

The sewer for the complete drainage of these 14 square miles is shown in the first table (No. 1) appended to Messrs. Bazalgette and Haywoods' report,* to be a 12 feet 6 in. circle, falling (for a length of 1 mile 2,470 feet) at the rate of 1 in 1,359. One inch of rain in the hour on this area (8,913 acres) is equal to 539,236 cubic feet per minute, and this 12 feet 6 in. sewer would discharge 1-16th part of this quantity, or 1-32nd part of that 2-inch rate of fall and yield, forming so prominent a feature in the evidence of the reporters.†

Messrs. Stephenson and Cubitt *now* say, "The lower portion of the sewer designed for this purpose would discharge 47,000 cubit feet per minute, being 12 feet 6 inches diameter, with a fall of 1 in 600."‡ Mr. Stephenson seems to have underrated the discharging power of this sewer. The approved formula gives about 49,000 cubic feet per minute.

It will be noticed that Messrs. Stephenson and Cubitt take the drainage and the whole of the flood waters from an area of only seven square miles; and the sewage, and a portion of the storm waters only, from the other seven mile area; thus reducing the *whole flood area* one-half, or by more than 4,400 acres, and more than doubling the rate of fall: they nevertheless provide the same sized sewer fixed by Mr. Bazalgette, and previously approved by themselves, for taking the *complete* ordinary and *flood* discharge of the whole 14-mile area, or reducing in some, probably large, proportion the flood discharge on one-half their area, they provide through their 12 feet 6 in. sewer, falling 1 in 600, a capacity one-half greater than Mr. Bazalgette had previously provided for the complete flood discharge on the whole area.

The fall in the 1 mile 2,470 feet, would be at $\frac{1}{1359}$ 5·7 feet, at $\frac{1}{600}$ 13·0 feet nearly, so that the mere error in level would be full 7 feet.

In their report there is a curious, but at first sight apparently unimportant, omission, seemingly, when followed up, giving the clue to the design of this great change in the Hackney-brook scheme. When speaking of the functions of this sewer, there is a remarkable abstention from all reference to previous reports or tables. This is evidenced by contrast with the explicit references, in the two following paragraphs of their report, to the tables "in your engineer's report," when speaking of the middle and low level sewers.§

The northern high-level table (No. 1)‖ would have shown the 12 feet 6 inch sewer falling 1 in 1,359, not 1 in 600, as they have it, a fall not to be found in this table, nor in any of the tables, and, as has been shown, a reference to the report would have disclosed the *fundamental* discrepancy.

Probably the following passage in Mr. Roe's Report (p. 7) may assist in the solution of this wide departure from the approved designs: "There was, therefore, no reason for incurring expense by bringing waters from the west side of Maiden-lane into the Hackney-brook line; necessitating the forming a large sewer along this line, and, *after all, one inadequate to its implied purpose.*"

Instances are given of the nice application of the formula which they approve to correct deficiency and excess of size where the *flood-marks* show the errors in their examples.¶ But there is sufficient internal evidence to show that they have suited their formula to *one* part of a hydraulic fact involving two essential conditions, and which part might as well have been collected from a tide-locked sewer as from an active sewer.

Messrs. Stephenson and Cubitt have no doubt of the value of Mr. Roe's table published in one of the general Board of Health's Reports,** showing the dimensions of sewers necessary to drain districts of a given area, "founded, as they believe it to be, upon an extensive series of careful observations," "but" they say, "it is satisfactory to find that it *signally confirms the accuracy of the calculations followed by engineers in considering such questions;*" and they allude to Mr. Hawksley's statement of the "close coincidence between the table formed by Mr. Roe and the formula used by him."

Mr. Jebb, the chairman to the Metropolitan Sewers Commission, [illegible] and lowed by engineers in considering such questions."††

In his letter to Viscount Palmerston, dated 8th March, 1854, he says,—"Of late, in laying down new sewers, hydraulic science has been rigorously applied, with a view to prevent either a defect or an excess in their size. And here, my Lord, I feel bound to observe that the Commissioners have not accepted the hydraulic tables which are understood to be adopted by the Board of Health; those tables being in a large measure at variance with the results both

of science and experience, English as well as continental, and being such as, if adopted for London, would entail the most serious consequences to the health and property of its inhabitants, by giving rise to the construction of sewers too small to answer the purposes intended."

Now let us see the result of Messrs. Bazalgette and Haywood's, Stephenson and Cubitt's, reasoning and admissions.

Mr. Roe's table shows a 9-feet sewer falling 1 in 480, conveying the water from 1 inch in the hour rainfall (with house-drainage) from 1,425 acres.

Mr. Bazalgette, on the contrary, asserts that a 9 feet 6 in. sewer falling at the same rate, will discharge only one-tenth of an inch in the hour rainfall (without house-drainage) from only 4,560 acres; for he says that Mr. Roe's 7 feet 6 in. sewer for the drainage of 7·12 square miles, or 4,560 acres, is altogether too small, and that it ought to be more than 9 feet 6 in. in diameter, as his, Mr. Bazalgette's datum of the discharge of 28,728 cubic feet per minute from $2\frac{1}{2}$ inches of rain equally distributed over twenty-four hours, *i.e.* equivalent to about one-tenth of an inch per hour.

Now, Messrs. Stephenson and Cubitt (who follow Mr. Bazalgette in their mode of calculation), assert that Mr. Roe's table signally confirms the accuracy of the calculations usually followed by engineers in considering such questions; but as Mr. Roe's table gives a result so much exceeding their own results, this would seem, on their own showing, to be impossible.

Hence the proof of the coincidence of Mr. Roe's table, and their formula involves the abandonment of their hypothesis of the fall and discharge in equal times.

But the engineers' hypothesis of the co-equal fall and *discharge*, contains an impossible condition; for *discharge* involves action through space and time, or motion, but this is inconsistent with the terms of the hypothesis.

Hence the discharge from any given fall is spread over a period proportioned to, and governed by, a vast variety of conditions, in the extent and character of areas, of discharging channels, of relative absorbencies of strata, of local peculiarities, &c.; and which, *à priori*, cannot be provided for.

Hence one error of the procrustean application of formulæ, howsoever generally correct as representatives of one unvarying condition.

Hence, if Mr. Roe's table and the formula be coincident, Mr. Roe's sewer is adapted to convey a flow not exceeding one-tenth of the inch per hour; and the discharge of his inch fall per hour, *must* be so distributed in *time*, as never to exceed this rate of flow; or it may be stated thus:—supposing an inch in the hour rainfall, and the rain then to cease, and assuming with the engineers it all finds its way into the sewers, then it would take ten hours at least to flow away: for by the engineers' formula, the sewer cannot take more than one-tenth of the fall, or the discharge, terms equivalent to their apprehension.

Hence, by parity of reasoning, standard with standard, it does appear that Messrs. Bazalgette and Haywood, Stephenson and Cubitt's capacities of sewers, for the main drainage of London, *must* be, on their own showing, extremely in excess, and consequently much more costly than the necessities of the case, as they show them, can require.

We want and must have complete drainage, but it is very desirable not to waste the rate-payers' money.*

ON THE SPIRE OF ALL SAINTS' CHURCH, CHESTERFIELD.

INSTITUTE OF BRITISH ARCHITECTS.

At an Ordinary Meeting of the Institute on the 8th inst. Mr. W. G. Coldwell read a paper on what often excites the curiosity of the traveller—namely, the spire of Chesterfield parish church. Its situation in the Midland Counties, near one of the [illegible] lines of railway, as well as its frequency by artists, renders it much more familiar than many structures of greater architectural worth. Whoever sees it, said the reader, cannot but be struck with its peculiar outline, and curiosity is increased when, on inquiring the cause, one fails to receive a satisfactory answer. A local rhymer says,—

> "Whichever way you turn your eye
> It always seems to be awry,
> Pray can you tell the reason why?
> The only reason known of weight,
> Is that the thing was never straight."

This is one account concerning this spire, that has in the neighbourhood numerous supporters. Many firmly believe it was built crooked, as we now see it. But there is another version far more singular, and which is, I think, more generally entertained,—that is, that the spire is not crooked, but is perfectly upright and perpendicular. When in Chesterfield last summer, in a position about the best for observing the inclination of this spire, I inquired why it was crooked from a gentleman whose age and intelligence I thought would assist me in this investigation. To my surprise, he, in the most positive manner, assured me it was "quite straight." He declined giving a reason why it appeared otherwise, and I could only regret that any one should make such bad use of his eye-sight. Within the last month I have had frequent proofs of the belief, out of Chesterfield, that this spire is straight; and strange to say, I find it even in print, with a reason assigned for its appearing otherwise.

In a work entitled "A Tour through Great Britain," published in 1753, there is the following concerning Chesterfield: "It has a fair church. The spire of its steeple being timber, covered with lead, is warped all awry." This gives us evidence of the existence of this inclination for upwards of 100 years.

Internally, this spire presents the strangest assemblage of timbers that can be conceived. The great deflexion from the perpendicular, amounting to about 7 feet, the twisting round of the upper part, which amounts at the apex to about 60°, the timbers which have been added when it was repaired,—all these combined with the want of light, produce such a constructive Babel, that I much question if its equal can elsewhere be found. On closely examining it, however, we are enabled to discriminate without much difficulty between what is old and what is of more recent date. The original construction is entirely of oak, while deal has been used in the repairs; and again, the old work is mortised together, and fastened with oak pins, and the new is secured with iron bolts and straps. With these particulars and guides, I have made out, from measurements taken in September before last, a section, which shows all the timbers that remain of the original construction. It may be described as follows: upon the tower walls, which are here 3 feet 6 inches in thickness, rest four tie-beams, each being of the scantling of 18 inches by 9: two of these rest on the north and south sides, and the other two are placed in the opposite direction, at right angles to the first, and notched on the top of them. At their intersection are four upright posts, 14 inches by 9 at the base, slightly converging inwards, which form as it were the posts of two queen trusses, and have struts, or principal rafters, 11 inches by 6, on all the eight sides. These posts are tenoned at the bottom into the upper tie-beams, and at the height of about 18 feet are tenoned into the under side of a second set of tie-beams. These second tie-beams, of the scantling of 15 inches by 9 inches, have others crossing them at right angles, notched on the top of them, similar to those first mentioned. Posts, 8 inches by 8, are tenoned into these, and these posts, at the height of about 17 feet, are again tenoned into the underside of a third set of tie-beams, which are of the scantling of 12 inches by 11. The same construction is repeated, and at an additional height of about 16 feet we have the inner upright timbers, or queen posts, tenoned into the under side of a fourth set of tie-beams, 9 inches by 7 [illegible] scantling, rise uninterruptedly as far as the construction can be seen, or to what is called the "crow hole." At the level of each of these tie-beams are struts, or principal rafters; also, between the posts are diagonal beams, all halved and pinned together; and also, a small scantling of timber placed horizontally, tenoned into the four sides of the upright posts. The ends of the tie-beams are secured to angle or hip rafters, which at the base are of the scantling of 8 inches by 6, and diminish to 5 inches by 5 at the top.

The Rev. George Hall, who, during his curacy of this church, wrote a history of it, says—"By measurement in January, 1818, the ball on which the weathercock is fixed was found to lean towards the south 6 feet from the perpendicular of its base, and 4 feet 4 inches out of its perpendicular towards the west, which gives a deflexion nearly south-west of 7 feet 5 inches."

The height of the spire itself, without the tower, is 111 feet: the tower is a square of 23 feet 10 inches inside, and the walls are 3 feet 6 inches thick. He believed the remarkable twist in the spire was caused by the decay of the timbers of one of the series of upright posts, by which the whole superincumbent weight had been brought down.*

THE DISTRICT SURVEYORS AND THE BOARD OF HEALTH.

On Wednesday, the 24th instant, a deputation of district surveyors under the Metropolitan Buildings Act, introduced by Thomas Alcock, Esq. M.P. and consisting of Professor Donaldson, Mr. Pownall, Mr. Gutch, Mr. Kendall, Mr. Godwin, and Mr. Hesketh, waited upon Sir Benjamin Hall, the president of the Board of Health, with reference to the allegation contained in a letter of the secretary of the Board to Lord Palmerston, already referred to by us, of their having omitted to take sufficiently stringent steps with regard to cellar-dwellings and noxious trades. They pointed out to him the imperfect nature of the data upon which the letter was founded, and the incorrect interpretation given to them. They proceeded to show that the requirements of the Act as to cellar-dwellings, did not give the district surveyors the powers attributed to them, and that there was no evidence of the illegal establishment of new noxious trades and businesses. The continuance of the old ones is permitted by the existing law till 1874. Sir Benjamin admitted that it was in truth a question of judgment, as to the powers really possessed by the district surveyors: he still considered, himself, that they ought to have interfered to prevent the occupation as separate dwellings of underground rooms not in accordance with the Act; but when he brought in his Bill for the better regulation of the metropolis, he would not fail to state the view as to their powers entertained by the district surveyors.

METROPOLITAN BUILDINGS OFFICE.

THE REGISTRAR'S SEAL.

We have seen a copy of an opinion of Mr. Lush, the barrister, upon the question referred to in our last number, as to whether the confirmation by the official referee of a district surveyor's certificate, in a party-wall case, required the registrar's official seal to give it completeness and validity, or not, and the following passages from that opinion seem clear and decided that it does not:—

Copy of Mr. Lush's Opinion, in the matter of Read.

"I am of opinion that the official referees have done all which is required of them in this case by the 'Metropolis Buildings Act,' that their confirmation of the surveyor's certificate is valid in law. It is not, I think, strictly formal, but there is nothing in it contrary to law."

"I am also of opinion that this is a document which does not require the seal of the registrar. I am unable to divine why some of the acts of the referees should be sealed, and others should not; but it is sufficient that the statute does expressly require the seal as necessary to the validity of some, and it does not require it for this or for several others."

"Although therefore I have felt considerable doubt during the [illegible] working of some of the clauses, and the difficulty I have mentioned of distinguishing between one class of documents and another, I have come to the conclusion that the Courts will adhere to the literal requisitions of the Act, and, according to these, Mr. —— [the building owner in the case] is now entitled to proceed, as if the consent of the adjoining owner had been obtained.

Temple. ROBT. LUSH."

It is right we should notice that this opinion is wholly irrespective of that of the Solicitor-General and others given in our last, and was

* In the first article on this subject, at p. 29, second column, for "one-two-hundredth," read "one-twentieth;" and for "maximum," read "minimum." At p. 30, second column, for "6½ mile area," read "6½ mile area."

* At this meeting, Mr. B. Ferrey, V.P. in the chair, the following gentlemen were duly elected as honorary and corresponding members: Mons. Gilbert, architect, member of the Institute, Paris, Mons. Alphonse de Gisors, architect, member of the Institute, Paris; Mons. Armand, Mons. Pelletchet, and Mons. Robault de Fleury, all of Paris, architects.

tained, not by the referees, but by the party erected in the proceedings. The registrar, 10 may have felt compelled conscientiously to struct proceedings, wherein his views differed rom those of the referees, will now doubtless feel exonerated in many cases from that necessity.

CHURCH-BUILDING NEWS.

Mansfield.—The Bishop of Lincoln lately laid the foundation-stone of a new church at Mansfield, Notts. In the cavity of the stone a bottle containing a number of coins was placed. The workmen, on going early, a few days afterwards, to labour, discovered that the smith's shop had been broken open, two crowbars taken, and used in forcing out the stone at the back of the one laid by the bishop and plundering the coin deposit.

Chatham.—The new church of St. Paul, Chatham, has been consecrated. The edifice stands on the north side of the New-road, at Union-street. It has been built from a design by Mr. Gough, architect. Messrs. Dove were the contractors. It is in the Norman style. The total cost has been somewhere about 5,000*l.* of which 500*l.* was for the site. The new church consists of a nave, transept, and chancel, its extreme length being 115 feet, and breadth 25 feet. The transept is 65 feet in length, and 25 feet in breadth. It is built of Kentish rag, faced internally with Caen stone, and externally with Bath stone facings. The circular pulpit and font are of Caen stone, both being decorated with a succession of Norman arches. There is a tower at the south-east end, rising to a height of 100 feet, the dressings of which are of Bath stone. The chancel is paved with encaustic tiles, and the rest of the church with Staffordshire tiling. There are galleries erected over the west end, and over the north and south transepts. The roof is open, and consists of deal, stained to imitate oak, as are also the whole of the pews and pulpit. The pews are low and without doors, and sittings are provided for 1,010 persons, free.

Devizes.—St. Mary's Church here, which has been closed for repairs and restoration during the past six or seven months, was reopened on Monday before last. The alterations effected have been,—the removal of the high, square pews, and the substitution of light and open oak benches; the removal of both galleries, the restoration of the windows, corbels, &c.; a cleansing of the walls and pillars of the interior; and erection of a vestry on north side of chancel. A new pulpit, reading-desk, and communion table have been supplied. Notwithstanding the removal of the galleries, the number of sittings in the church has been considerably increased, through the saving of space effected by the substitution of the present seats for the old pews. The total number of sittings is now upwards of 600, more than one-half, viz. 381, free. An organ has been placed in the opening in the lower part of the tower, over the west entrance. The cost of the alterations has been nearly 1,000*l.* The organ cost 250*l.*

The Lea.—According to the *Gloucester Chronicle*, the parish church of The Lea was reopened for Divine service on Wednesday week. The nave, chancel, and aisle have been almost entirely rebuilt: the tower and spire remain unaltered. The entrance porch has been removed from the south to the north side, an arrangement rendered necessary by the nature of the ground. The removal of a prodigious gallery, which overhung and darkened the church, has improved its appearance; while, by the substitution of open sittings for unsightly pews, much additional accommodation is provided for the poor. The pulpit is of white stone, relieved with a floreated cross. The carvings, with inscription, are the workmanship of Mr. H. Frith, of Gloucester. The whole of the windows appear to have been filled at one time with stained glass. The fragments are preserved, and will eventually be arranged in the east window of the Mortuary Chapel, said to have been the burial-place of the lords of Ecclesweld Castle. There is a deficiency of funds for the repair, of 200*l.* yet to be supplied. A parsonage has just been completed, in the mediæval style. Messrs. Medland and Maberly, of Gloucester, furnished the designs; and the builders employed were Messrs. Wingate and Sons, who executed most of the works.

Beoley.—A memorial window, in two compartments, representing the Virgin and St. John, has been recently placed in the south-eastern aisle of Beoley Church, by Mr. F. Mumford, of Bath. The window was supplied by Hardman, of Birmingham.

Nottingham.—The plans of Mr. Thos. Oliver, jun. have been selected for the new Congregational Chapel, at Nottingham, under the auspices of the English Congregational Chapel Building Society. The works are to be commenced forthwith.

Coventry.—Mr. Ruddle, of Peterborough, we learn, has the contract for reseating the Church of Holy Trinity, Coventry. The unsightly pews and galleries are being removed, and the new seats are to be in this summer. It is calculated, that after providing accommodation for all those who now have seats, there will be 500 free seats for the working classes, uniform as to make with the appropriated seats.

Mansfield.—The foundation-stone of a new church was laid here on Friday week. The edifice, which is dedicated to St. John, will be a rather light structure of the Decorated style of Gothic architecture of the fourteenth century, and will afford sitting accommodation for upwards of 1,000 persons. The extreme length of the building will be 172 feet, and the width 66 feet, and it will consist of a nave and two side aisles. A tower, in height 80 feet, will be placed at the west end, surmounted by a spire of 85 feet in length, access being had to the clock-works and belfry by means of a turreted spiral staircase at south-west angle of tower. The entrances are on the north side of the chancel vestry, through a porch on the south, and beneath the tower on the west side of the building: there is also a priest's entrance on south side of chancel. The walls of the edifice will be composed of Mansfield stone, with Ancaster stone facings. The body of the church will have plain sittings, and merely square bench-ends. The height of the nave, which will be supported by five arches, will be 57 feet, and that of the chancel 48 feet. The heating of the church, which is to be effected by means of hot water, has been placed in the hands of Messrs. Silvester and Co. of London, and the builders are Messrs. Lilley and Elliott, of Measham. The architect is Mr. Stevens, of Derby. The edifice will be finished, it is thought, by June, 1856. The original fund whence this church is being built (6,000*l.*) was provided by the late Mr. Galley Knight, M.P. for Notts. The builders' work has been contracted for at 5,900*l.* to which must be added 1,100*l.* for enclosure and drainage, heating, bell, architect's commission and expenses, and the furniture of the church, making a total cost of 7,000*l.* About 1,000*l.* more are required to complete the erection of the building, and subscriptions are solicited.

Sunderland.—Three stained-glass windows, by Powell and Sons, have been placed in the chancel of the church at North Sunderland, a gift of the Rev. W. N. Darnell.

PROVINCIAL NEWS.

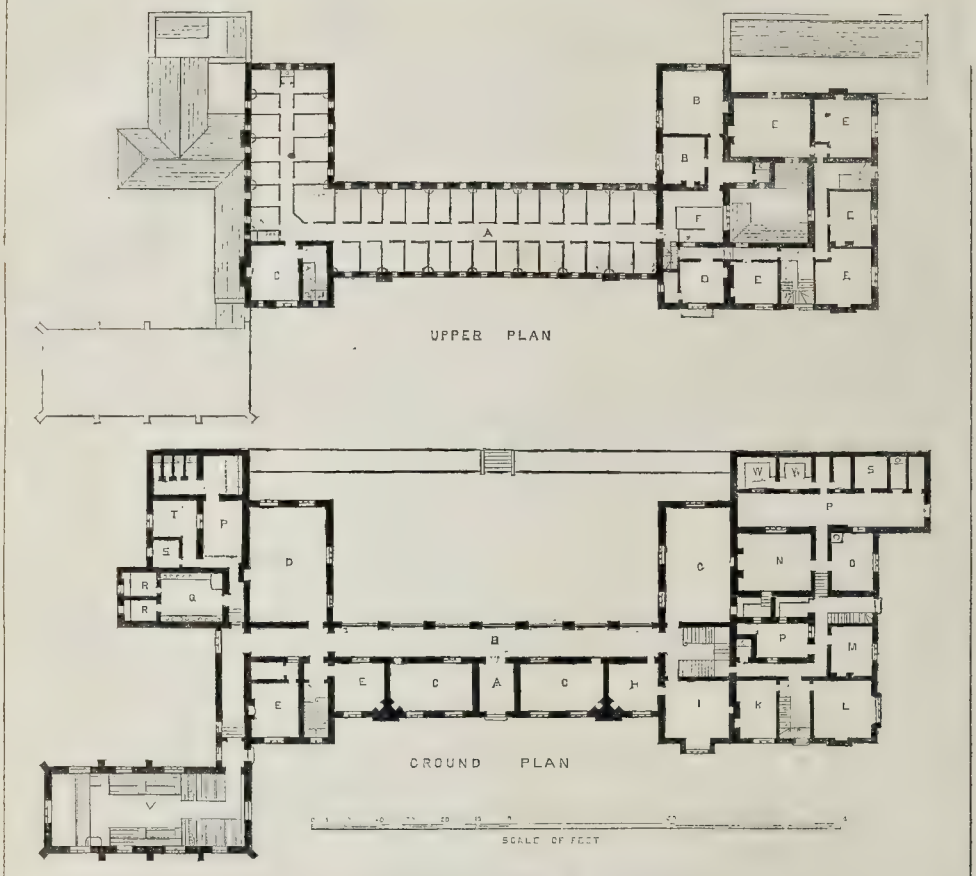
Boston.—An influential public meeting was held here last week for the purpose of establishing a new gas company. It was resolved, by a nearly unanimous majority, "That a company for supplying pure gas at a maximum price of 4s. per thousand feet, to be called 'The Boston [illegible] New Gas Company,' be formed on a mutual principle, which shall constitute an identity of interests between the producers and consumers, in which the profits shall be returned to those who create them as consumers in reduction of price, after payment of a dividend not exceeding ten per cent. That the capital shall be 10,000*l.* to be divided into shares of 10*l.* each, with power to increase the capital to 15,000*l.*; and that each person applying for shares shall pay a deposit of 1s. per share." The present company are said to have not kept faith with the gas consumers, having charged 8s. 4d. after they had got fittings put up on the promise of gas for 7s. 6d.; and having charged 1s. 9d. per three months for use of meters, instead of 1s.

Hitchin.—The new national schools here were opened on Thursday in last week. They have been erected at a cost of nearly 4,000*l.* out of which sum the nobility, gentry, and tradesmen of Hitchin (a place of 7,000 inhabitants only) have contributed 2,013*l.* The schools are built of red brick, faced with stone, and are of Early English style. The roofs are high pitched, and open-timbered, with curved principals. The buildings consist of an infants' school, 50 feet by 25 feet; boys' and girls' schools, each of same dimensions—67 feet 6 inches by 20 feet; class-rooms, 21 feet 3 inches by 14 feet; and library, 14 feet square. There are separate entrance-halls to the schools, with water laid on for the use of the children, and all the rooms are warmed with hot air by Hudson's apparatus. For the master, and the mistresses of the girls' school and infants' school, there are detached residences, each of which contains three rooms on the ground-floor and three bedrooms above. Round the buildings there is a string-course in white brick, upon which various texts of Scripture appear. The schools face the south porch of the old church of Hitchin. The architect was Mr. J. H. Hakewill; and the contractors were Messrs. Butterfield, of Hitchin.

Margate.—The contractor, Mr. Bastow, is now pushing on the works of the new high-water landing-pier. There remain five columns to drive and a few girders to raise.

Chard.—Complaint is made that a clear stream which runs down each side of the Fore-street here is being withdrawn, so as to prevent the washing away of sewage by means of which the locality was benefited. Sickness has been simultaneously prevailing, possibly from this cause.

Milford.—The foundation-stone of a campanile to Castle-hall, the mansion attached to the Milford estate, was laid on Monday week. The architect is Mr. W. H. Lindsay, of London. The tower, or campanile, with tetrastyle portico, Ionic porch, and other intended additions, have been designed in the Italian style of architecture prevalent in the fifteenth and sixteenth centuries. The campanile, from base to summit, will be 93 feet in height; comprising an observatory, a clock tower, and a landmark. The apartments between the observatory and ground-floor are to hold the mathematical and astronomical instruments, &c. The works of the clock (which is to wear four faces) will be contained in the attic part of the building. The various floors will be approachable by a geometrical or circular cast-iron staircase of ninety-eight steps. The niches on the four sides will be occupied by four statues, emblematical of the four winds—draped and posed, to notify the climates and the costumes whence they blow.



Seaham Harbour.—The Londonderry Literary Institute, Seaham Harbour, was formally opened on the 3rd inst. by Sir Archibald Alison, Bart. the historian. It is in the Doric style, and has a portico of four columns, with side wings, which form the library and news-room. The main body of the structure is appropriated to the purpose of a public hall, or lecture-room, capable of holding about 500 persons. It is built of stone, and cost about 1,500*l.* Mr. Oliver, jun. was the architect.

Chester-le-Street.—The Board of Guardians of the Chester-le-Street Union, having purchased a site, opposite Lumley Castle, for the erection of a new workhouse, have appointed Mr. M. Thomson, of Newcastle, as their architect.

Halifax.—It is said that a new gas company will probably be soon formed here, as the wants [illegible] and the wishes of the inhabitants have not of late either been attended to or cared for by the present company.

Grimsby.—Messrs. Sissons, of Hull, have contracted for the completion of the fishing-dock here. The works were undertaken by the dock company; but for some time past, and after a considerable amount of expenditure, they have been suspended.

BATH SOCIETY FOR PROMOTION OF THE FINE ARTS.—The Bath Graphic Society has merged into this new association, the first of whose conversazioni was held last week, when a large assemblage of pictures, &c. was exhibited, and the committee have been congratulated by the local press on the signal success of their exertions.

PLANS OF THE EXETER DIOCESAN TRAINING COLLEGE.

MR. WATSON'S RAILWAY TRAVERSER.

A PATENT has been recently granted to Mr. T. S. Watson, B.A. for an improved mechanical arrangement for transferring railway carriages across a railway from one line of rails to another. Mr. Watson says, "I do not claim the principle of transferring the carriages across the lines by placing them on pairs of detached rails, but I do claim as my invention the principle of transferring the carriages across the lines of railway by placing them upon pairs of detached rails, where such rails are supported upon chairs which run on wheels, and which chairs are attached to endless chains, whereby they are moved in such a manner as to pass with them in either [illegible] direction continuously across the railway."

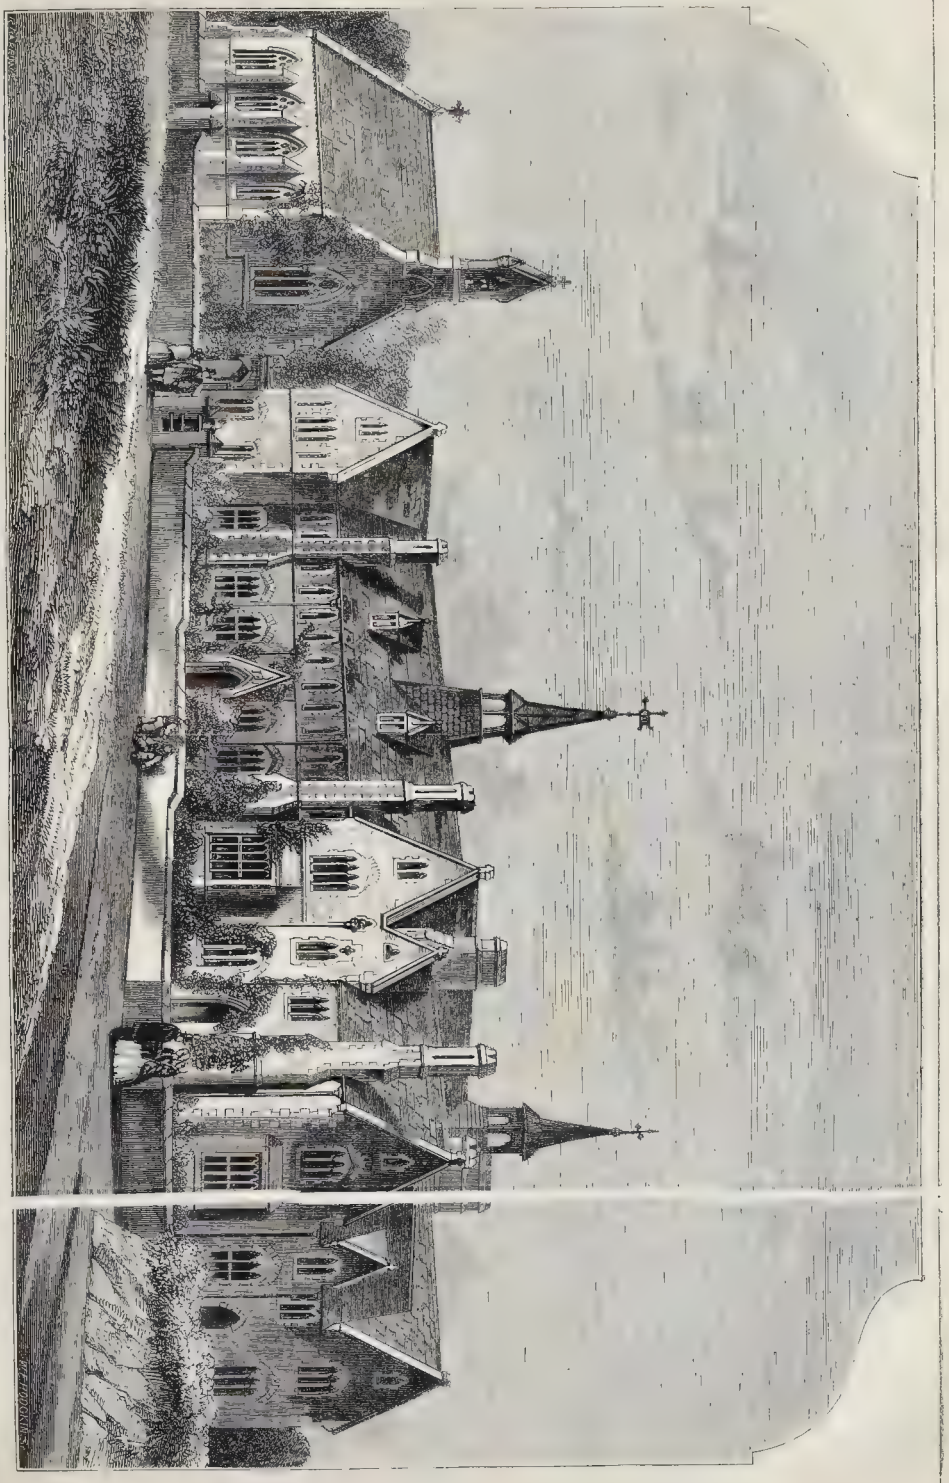
The advantages proposed by the use of the "improved railway traverser" are, that, as compared with other traversers, it is always ready to receive and transfer a carriage in either direction, not requiring, after shifting one, to be brought back again for the next,—that it moves at one time as many carriages, less one, as there are lines of rail,—that it is worked with much less labour,—and, as the whole of it always either forms a part of the line of rails, or is out of the way beneath them, it does not encumber any part of the line when not in use.

As compared with turn-tables, it saves the time occupied in turning the carriage with the table before and after crossing the line; it avoids the shock which the carriage receives when the turn-table is suddenly stopped by the catches; it saves the labour incurred in turning the carriage and pushing it across the lines,—as its transfer is accomplished by one man at the winch-handle, leaving the other men free to bring up another carriage; and it removes the necessity for the clumsy and dangerous openings at the edge of the platform for the turn-tables to work in, which have been the cause of numerous accidents.

It appears to merit examination on the part of those who are concerned in the construction of railways.

EXETER DIOCESAN TRAINING COLLEGE.

THE premises occupied for some years by this college being found quite inadequate to its wants, it was resolved to raise, by subscription, a fund for the erection of new buildings, to accommodate forty students. The subscription list was headed by the Bishop, who contributed 500*l.* and a sufficient sum having been raised, which, together with grants made by the Committee of Council on Education, and the National Society, would justify the committee in commencing proceedings, three acres of land, a little more than a quarter of a mile from the cathedral, were purchased, and a contract made for the erection of the buildings, exclusive of the chapel. The foundation stone was laid by Sir John Kennaway, Bart. on the 19th of May, 1853, and the new buildings were opened by the Bishop on the 18th of October in the past year. The cost of the buildings, exclusive of the site, has been about 7,000*l.*



Subscriptions have since been entered into for purchasing two more acres of land, in order to promote industrial training, and likewise for the erection of the chapel, which, although shown in the view, is not yet erected.

Mr. Hayward, of Exeter, was the architect; Mr. Ware, the contractor.

EXETER DIOCESAN TRAINING COLLEGE.—Mr. Hayward, Architect.

PHOTOGRAPHIC EXHIBITION.

THE exhibition opened by the Photographic Society, at 5, Pall Mall East, should be visited by all who are interested in this wonderful art. Mr. Roger Fenton's landscapes stand pre-eminent amongst the specimens here gathered together. Nothing has been seen more beautiful than his Pool below the Strid, 626, Rivaulx and Tintern.

Mr. Hennah, of Brighton, still maintains his ascendancy, as it seems to us, in the production of small portraits. (49) "The Entrance Gateway, St. John's College, Cambridge," by Rev. Mr. Kingsley; (56) some views in Lincoln, by Mr. Sedgfield; some of M. Laroche's large portraits; (177 and 196) touched portraits by Mr. Mayall; "Clouds," by Mr. Sherlock (248); Mr. Robertson's views about Constantinople; (429) "The Keep of Richmond Castle," by Mr. Cundall; (630) "The Park Side," by Mr. White; and (633) "St. Anne's Well, Great Malvern," by Mr. Joseph Wilks (for the sake, too, of a personal recollection), have special marks against them in our catalogue.

An R.A. said, at the private view, he declined to call this the "*fye*-to-graphic art." The joke is not a new one (ask the witty author of "The Templar" if it be), but we quite agree in the objection.

THE ABUSE OF WORKS OF LIVING ARCHITECTS.

WITH regard to the criticism of works by living architects, to which your correspondent "M. A." again refers (p. 10), may I be permitted to ask in reply, if a bad building is not as legitimate a subject of condemnation as a bad picture? One hears no outcry against the latter: yet the injury done in the case of the bad building is far greater than in that of the bad picture: it is indeed irreparable as far as it goes! We can escape from the latter, but are haunted continually by the former whenever we are so unfortunate as to be in its neighbourhood. As, therefore, there is so much more at stake in the case of the bad building, it is but fair, for what we pay so dearly, that we should be allowed to avail ourselves of the only consolation remaining to us, viz. the permission to make free use of it as a conspicuous beacon always at hand for future architects to steer clear of,—for our critics constantly to point to,—and for the public at their leisure to examine for themselves. If we are denied this privilege, I do not see how we are to improve! Hence, I think a promulgator of incontrovertible principles will have, or ought at all events to *find*, "occasion to go on" a step farther than your correspondent seems to consider desirable, and if not to "settle for" the public, at least to point out to them, by way of illustration, how these principles can be best applied, or contrasted with opposite principles carried out in individual buildings,—not, as "M. A." says, with a view of "ministering to the indolence of those who like to have their thinking done for them, and enable them to say such a building is bad because Mr. So-and-so abused it," but just the reverse of this, viz. to bring wrong principles more clearly before their eyes than is possible in any other way,—to rouse indolence to use its own eyes, and to think for itself; for the usual and best method of instruction is acknowledged to be by illustration. Now, the position of your correspondent cannot, I think, be maintained when he says "Where incontrovertible principles are clearly put forth, hearers will be perfectly competent to decide for themselves on the merits of the buildings that are rising around them,"—without the need of detailed reference to individual examples. This is surely going rather too fast, and assuming a power of judgment, and a knowledge of the principles of architecture in the public mind, which I fancy few will give it the credit of possessing at present. I cannot see clearly the connexion between the two last sentences of "M. A.'s" remarks, but they appear to me to amount to this: "If the language of abuse be unnecessary (which I suppose no one ever doubted), it is natural to expect a liberal-minded critic will allow private feeling more or less to cloak the expression of his real sentiments, and induce him to say partly what he does not think!" But this again is scarcely consistent with his previous admission of my position, that "personal considerations should *not* be allowed to interfere with criticisms that have for their object the discovery of truth." After all, "honesty" is, in the long run, "the best policy," and "truth is not private property," as some one has well said. Now, although no doubt we should be careful always to avoid giving needless offence, may it not be said that very many are far too ready to *take* it, from a principle of love to themselves rather than of love for truth for truth's own sake? Upon the whole, I think it will be found there is especial danger, in the present day, of our damaging, by our courtesies and compliments (which, after all, are often nothing more than so many baits to serve self-interest) that which is of far more consequence than our own individual reputation and prospects, viz. the cause of universal truth, and the prospects and interests of society.

R. W.

PRESERVATION OF TIMBER.

MR. A. E. PASCHAL LE GROS, of Paris, and Castle-street, London, has patented improvements in preserving timber. The complete specification recently filed at the Patent Office, thus describes the invention:—The improvements consist in a new mode of effectually preserving timber and all kinds of wood by means of a cheap chemical compound, which does not destroy the fibrous structure of wood, or otherwise injure it. For this purpose there is employed a solution of muriate or hydrochlorate of manganese, resulting from the manufacture of chlorides of lime and of the bleaching liquid called lye, or water of gavelle, or chloride of potash, which residue is at present treated by manufacturers as waste. This salt containing a great proportion of acid, it is neutralized by the admixture of chalk (carbonate of lime) or of oxide of aluminum. The salt when thus reduced to a neutral state, gauges by the aërometer, used for concentrated acids, from 30 degrees to 35 degrees, and may, therefore, be easily carried to the place where it is to be applied as a solution, containing three parts weight water to one of acid. The acid in the residue may also be neutralised, and the ferruginous matter in it precipitated by means of oxide of zinc. There is thus obtained a double salt of manganese and of zinc, which is said to have the same or superior preserving qualities, as the double salt of manganese and of lime produced, as above described. This double salt of manganese and of zinc may be very efficiently applied to absorbing the effluvium of putrid or putrescent matter. For preserving wood the solution obtained in either of the two ways described is poured into a trough, and the immersion of the logs, or pieces of wood, is effected by placing them vertically in the trough, in such manner that they are steeped in the liquid to about three quarters of their length. The wood is thus subjected to the action of the solution, during a length of time varying from twelve to forty-eight hours. The solution rises in the fibres of the wood, and impregnates them by the capillary force alone, without requiring any mechanical action, whilst a horizontal immersion under the same circumstances has been found to produce no satisfactory effect. The timber which has been thus prepared, is said to acquire new properties,—to become incombustible; neither has change of temperature any influence upon it. It is hardened, and the preservation is more lasting than that effected by metallic sulphates, which weaken the ligneous fibre, and impart to wood brittleness, and a tendency to crack and warp under the action of heat. The patentee further remarks, that it will be easy, and in some cases convenient, to combine the good effects of creosote with those of either of the two solutions obtained as above described. For this purpose he dissolves in concentrated sulphuric acid a variable quantity of some tarry or resinous oil; then dilutes this solution with water, and mixes a suitable quantity of it with the solution of muriate of manganese when required. The claim of the patent is for "preserving all kinds of wood or timber, or organic matter by means of a double salt of manganese and of lime, or of a double salt of manganese and of zinc, used both (*sic*), either alone or with an admixture of creosote, and obtained in the manner described above."

RAILWAY PROGRESS IN THE UNITED STATES.

THIS is a subject on which a few memoranda we have gleaned, may not be uninteresting. The extraordinary progress of the United States in railway construction, strikes every one interested in the current history of passing events; and the success of that country in this element of national greatness, is at once an index of the energy and intelligence of the people and a matter of admiration to others. It was in 1825, as will be remembered, that Stephenson superseded the old tramway of the Stockton and Darlington line, upon which a year later he ran the first locomotive. On the other side of the Atlantic, the Trainoy Railway, in Massachusetts, was opened in 1827. It was only three miles in length, and was used only for the transit of granite from the ledges to tide-water. In 1829 there were constructed some twenty-five miles of railway in Pennsylvania for coal purposes. On December 28, 1829, thirteen miles of the Baltimore and Ohio Railway in Maryland, were opened. In 1831, there were six miles of railway in South Carolina. In 1832, seventeen miles of the Mohawk and Hudson Railway were opened. In 1832, Kentucky had six miles of railway constructed. In 1835, Virginia had twelve miles; New Jersey thirty-four miles; Delaware sixteen miles; Alabama forty-six miles; and Louisiana forty miles. The total number of miles of railway finished in the United States, in 1832, was one hundred and thirty-one; in 1833, five hundred and seventy-six miles. The following table, which reaches to 1852, will give an idea of the progress from year to year, from the earliest period mentioned above, throughout the United States:—

Year 1828...	3	Miles	Year 1841...	2,167	Miles
,, 1829...	28	,,	,, 1842...	3,319	,,
,, 1830...	41	,,	,, 1843...	3,877	,,
,, 1831...	54	,,	,, 1844...	4,174	,,
,, 1832...	131	,,	,, 1845...	4,311	,,
,, 1833...	576	,,	,, 1846...	4,511	,,
,, 1834...	762	,,	,, 1847...	4,870	,,
,, 1835...	918	,,	,, 1848...	5,336	,,
,, 1836...	1,102	,,	,, 1849...	6,350	,,
,, 1837...	1,421	,,	,, 1850...	7,355	,,
,, 1838...	1,843	,,	,, 1851...	9,090	,,
,, 1839...		,,	,, 1852...	11,565	,,
,, 1840...	1,920	,,			

THE AQUEDUCT OF ROQUE-FAVOUR.

INSTITUTION OF CIVIL ENGINEERS.

ON the 16th inst. the paper read was "A Sketch of the Canal of Marseilles, and a Description of the Aqueduct of Roque-favour," by Mr. Rennie. This canal was designed chiefly for the purposes of irrigation, but it was extended for supplying the city with water, by gravitation, for domestic use and public distribution, as also for affording water power to numerous mills and manufactories. The water was described as being taken from the River Durance, at Pertuis, a distance of only twenty-eight miles, in a straight line, from Marseilles, but from the mountainous nature of the country, the course was prolonged to nearly sixty miles; passing through forty-five tunnels, and over numerous aqueducts, the largest of which was that of Roque-favour. The source of the canal being 614 feet above the sea, there was a fall of 29 inches per mile in the canal, yet still preserving a height at Les Baumes St. Antoine, near Marseilles, of 490 feet above the sea. The section and the velocity were such as to permit the passage of one million and a quarter tons of water per day, or 198,000 gallons per minute. From St. Antoine four branch canals diverged in different directions for the purposes of irrigation, whilst the main trunk continued on to Marseilles, where it arrived at a height of 242 feet above the sea. The water was at times much discoloured by earthy matter held in suspension, and so much carbonate of lime was deposited, that any attempt to convey the unfiltered water in pipes would probably have ended in their being stopped up by incrustation. This, it was presumed, had in some degree influenced the construction of so great a work of masonry as the aqueduct of Roque-favour, which spanned a deep ravine,—the bed of the River Arc. The structure, which was described as the most important of modern times, and even exceeding in height the celebrated Roman work, Le Pont du Gard, con-

sists of three tiers of semi-circular arches of cut stone, with rustic facing and drawn joints: the lower tier is composed of thirteen arches, 112 feet high and 49½ feet span; the second tier of sixteen arches, 114½ feet high and 52½ feet span; and the third tier of fifty-one arches, 41½ feet high and 16½ feet span; the piers of the first and second tiers being over each other, and the dimensions diminishing upwards. The greatest height is 265½ feet; the mean height 174 feet, and the extreme length 1,289½ feet. The transverse thickness of the base of the lower piers is 16 feet, and the breadth on the face 18 feet, with projecting and battering counterforts, rising up to the top of the second pier; the transverse width of the upper piers being 14½ feet, without any counterforts. It contains about 51,000 cubic yards of masonry, and the pressure upon the foot of the tallest pier is equal to 210 pounds per square inch.

The channel for the water is lined with brick and cement, and exhibits some cracks, apparently arising from the subsidence of the second tier of arches.

This work, which was not commenced under favourable auspices, the excavations having been washed away, after the foundations had been partially laid, occupied about six years in construction. It was designed by and executed under the direction of Mons Montricher, at a cost of about 151,000*l.*: the expenditure for the canal was nearly 700,000*l.*; but the outlay for the whole of this great undertaking was expected to reach nearly 2,000,000*l.* A complete establishment of service reservoirs and filtering beds is being created at Marseilles, with the intention of distributing the water by pipes throughout the city, and, when completed, it might be anticipated, the writer thought, that it would form one of the most powerful and perfect waterworks in the world.

Notices of Books.

VARIORUM.

THE new number of the *Quarterly* contains an article on "Fires and Fire Assurance," and a second on the "Open Fire-place," with especial reference to Dr. Arnott's improvement on Cutler's stove. In the first, reference is made to the danger attendant on the erection of large warehouses, and the restrictive clause in the Metropolitan Buildings Act, that "no warehouse shall exceed 200,000 cubic feet in contents." "The Manchester-warehousemen nevertheless have managed to set that part of the Act at defiance. Let us take, as the latest and most flagrant example, Cook's warehouses. This structure, which within these last two years has raised its enormous bulk in St. Paul's-churchyard, and actually dwarfed the metropolitan cathedral by the propinquity of its mass, contains 1,100,000 cubic feet of space open from end to end, or 900,000 *feet more than it is entitled to possess.* If we were to take twenty-five ordinary-sized dwelling-houses and pull down their party-walls, we should have just the state of things which is here presented to us. But it will be asked, if it is against the law, why do not the proper officers interfere? Where are the City surveyors? The reason, good reader, is this: the Manchester-warehousemen of late years have adopted a new reading of the law—a reading which we believe no judge would allow, but which the surveyors have not yet ventured to dispute. 'We escape altogether,' say these gentlemen, 'the provisions of the Building Act relative to warehouses, as, by reason of our breaking bulk, our places of business are not mere storehouses.' That this reading is a violation of the spirit of the statute there can be no doubt: that it is also a violation of its letter we also believe: if not, it is high time that the law be amended upon this point, for we affirm, on the very best authority, that London has never, since the great fire, been in such danger of an overwhelming conflagration as it is now by the presence and rapid spreading of these huge warehouses, filled with the elements of destruction, and placed side by side, as though for the very purpose of producing the utmost mischief by contagion."——The Kilkenny Archæological Society have issued their volume of Transactions for the year 1854. It includes an elaborate article on the Ecclesiastical Antiquities of Youghal, by the Rev. Samuel Hayman; and an interesting communication from Mr. John Windele, on the Runic Crosses of the Isle of Man.——The third part of the *Journal of the Architectural and Archæological Society of Chester* contains much interesting and valuable matter on local antiquities. The illustrations are still coarse and inexact, but as the funds at command probably would not permit more expensive engravings, it is better to have even such records as these rather than none.——"The Art of Travel; or, Shifts and Contrivances available in Wild Countries," by F. Galton, is a volume full of experience and suggestion, yet capable, as the author himself points out, of being made still more replete with valuable matter, gleaned from the experience of other civilized "bush-rangers." Mr. Murray is the publisher.——"The Chemistry of Common Life," by Mr. J. F. W. Johnston, a series of admirable little treatises which appeared in separate sheets, has been collected into two goodly volumes, the second of which is now before us. The publishers are Messrs. Blackwood.——"The Edinburgh New Philosophical Journal," published by Messrs. Longman and Co. has entered on a "new series," and from its celebrity and its *old* and established standing, ought now, in place of being called a new journal, or rather, a new new one, to be simply named "The Edinburgh Philosophical Journal." It has acquired, however, a sort of new life by being placed in the editorial hands of three gentlemen of well-known ability, Prof. Anderson of Glasgow (Regius Professor of Chemistry,) Sir William Jardine, Bart. and Dr. Balfour, Professor of Medicine and Botany, at Edinburgh. Its former able editor, Dr. Jameson, if we mistake not, died some short time since. The quarterly part for January current, has just been issued. The opening article, amongst its varied contents, is one on the means of realizing the advantages of the air engine, by Mr. W. I. M. Rankine, C.E.——A small volume on "Indestructibility," published by Messrs. Groombridge, teaches that "one of the great truths proclaimed by nature and science, and traced throughout surrounding things, from a bit of coal up to the soul of man," is the indestructibility of all things, or rather of all "matter." There is much truth, but some fallacy in such teaching, and what is more, it is capable of being reversed, and the very contrary conclusions deduced from it. Carbon, a favourite exemplar with the author, is regarded as one of the elements of nature, and as such essentially indestructible; and it may be so, but it was Davy's opinion that probably *the only* substance in nature entitled to be truly regarded as an element, was hydrogen. All other "matter," therefore, he inclined to believe, was based on or derived from hydrogen, and hence might be resolvable into it again, so that such matter as carbon, for instance, may yet be found to be destructible into other proximate "elements;" so much so, that carbon would then no longer exist. To rank the soul of man, therefore, with carbon, as only equally indestructible, is to trench on ground which the author himself ought to regard as somewhat dangerous. Just as potash was not long ago regarded as an indestructible element one day, and the next was decomposed and destroyed into a totally new metal and oxygen gas, so that the potash so decomposed and destroyed no longer existed, carbon also may, to-morrow, be destroyed into some other new metal and hydrogen; or, it *may* be something else. We do not suppose that the author meant to insinuate that the soul of man can ever be converted by decomposition into something else—into two or more other "things" or principles, whatever they might be; but assuredly his doctrine implies as much. It is easy to talk about the indestructibility of "matter" which *is not* "all things;" but which is the name we give to *that* of which all things are supposed to be "made," although the probably more orthodox doctrine is that "all things" were made of "nothing." In truth, while we talk about "matter," we know nothing in the world about it. Many matter-of-fact philosophers do not believe in its existence at all. Even Professor Faraday seems inclined to think that "all things" are based and built up, as it were, on active energies, forces, or powers, existent in physical points, and that there is no such thing as the "matter" whose *essential* properties, on the contrary, are *passivity* and *inertia.*

Miscellanea.

WAR APPLIANCES.—One of the important floating fortress-batteries, in preparation at Cherbourg, is described in the *Courier du Havre.* It is called the *Devastation.* As no attempt has been made to gain beauty at the expense of solidity, in appearance it is very like the huge barges which ply on the Seine between Havre and Rouen. It is entirely flat-bottomed, so as to draw but little water, even after receiving heavy artillery. It is 51 yards long and 14 yards wide, and will be armed with sixteen guns of fifty. Its sides are nearly 13 inches, with sheets of iron nearly 4 inches thick besides, and capable of withstanding the most furious fire of 64 lb. shot at even 10 yards distance. The ribs are from 13½ to 15¾ inches thick, and are placed close together. The battery will be covered over, and will be supplied with a screw of 150-horse power. Its powers of destruction will be very formidable. The *Devastation* will, it is expected, be completed by the end of February. It ought, if still needed at Sebastopol, to be forthwith dispatched to the Black Sea instead of to its original destination, the Baltic: at least some of these batteries surely will be sent south as well as some north. The idea appears to be not very novel after all, although no such battery has ever yet been finished. Ever since 1842 there has been one on the way at New York, for the protection of its harbour. The dimensions of this one, however, are really unwieldy: it is 400 feet in length. The frame has been for some time complete, and the heavy iron plates about one-third fixed; but lately 140 men who had been at work on this leviathan were temporarily discharged on account of some straitness in the money market.——Mr. Liddell, the engineer of the new Leicester and Hitchin Railway in connection with the Midland, and who superintended the laying of previous submarine cables, has been sent by Government to Turkey to superintend the laying of the cable between Varna and Balaklava or Cape Chersonese. The length of this cable, by the way, as well as the distance, is variously described. There is said, however, to be 400 miles of cable, and it is to be presumed that full allowance for slack in laying has been made. The telegraph is said to be the self-registering one of Morse, with a French improvement whereby several messages can be dispatched from either end, through a single wire, at one and the same time.

THE BURIAL-BOARD AT ABERGAVENNY have decided on adopting the designs of Mr. Henry Ramur for their new cemetery. The chapels for the same were let on Thursday last to Messrs. J. and W. Price, masons, of Abergavenny, who are now engaged on the drainage, boundary-walls, &c.

THE SURREY ARCHÆOLOGICAL SOCIETY.—The council have made a report upon the termination of the first year of the society's existence, from which it appears that the progress has been satisfactory. One of the proposed objects of the society was the establishment of a library and museum; and it is satisfactory to state, that some progress has been made in this respect. Already upwards of fifty volumes have been contributed, with various manuscripts, drawings, pamphlets, and printed papers. A collection of nearly 500 topographical and other prints, relating to the county, has been formed. A number of rubbings from Surrey and other brasses have been obtained, also a series of eighty corporate abbatial and other seals, including those of the Earls of Surrey. On the 1st January, 1854, the total number of subscribing members was 300, while on the 1st January, 1855, it was 391, of whom 47 are life members.

THE EGINA MARBLES AT SYDENHAM.—Allow me to make a suggestion to the directors with reference to the casts of the magnificent group of statues, discovered, by Professor Cockerell, to belong to the western pediment of the Temple of Minerva, at Egina. Placed as they are at the end of the nave, and within a few feet of the glass windows, much of their intrinsic merit is lost to the beholder, from the want of a good background. The effect of the glare peering as it does with undue intensity through the group, is positively painful. Why not erect a model of the tympanum and cornice, as is done at the British Museum, casting the former with red plaster, after the manner of the original temple? I can myself bear evidence that such material and colour were used, and I doubt not there are many others who have also visited the temple, that can bear additional testimony to the fact. No one who has seen the original figures in the "Glyptothek," at Munich, and admired them as I have done, would believe that those in the Crystal Palace were correct copies, so much are they spoiled by a bad position. If my suggestion of a restoration of the pediment be objected to, on the score of presenting the inspection of the statues from behind, then the next best remedy would be to erect a red screen some three or four feet off. At all events let the glass lights be hidden, and the group resuscitated.

W. G.

THE STANLEY MEMORIAL WINDOW, NORWICH.—With reference to Mr. Harrod's criticism of the Norfolk Memorial Window, recently reported by us as part of the proceedings of the Norfolk and Norwich Archæological Society, a correspondent writes as follows:—"Mr. Harrod impugns a statement, which lately appeared in the Norwich papers, 'that a design of this kind is justified archæologically by the architecture of the window,' asserting, 'without fear of contradiction,' that 'no specimen of glass, at all resembling that now in the window, can be produced of an earlier date than 1500,' the date of the window itself being 1450. But I am unable to see the force of Mr. Harrod's remark. No one ever meant to assert that the style of the ornament was not as late as 1500, or even later; but only that the principle of carrying the design across the window, irrespective of the mullions, was justified archæologically by the architecture of the window, which is indisputable, the principle having been introduced long before 1450, dating, indeed, with the introduction of the mullioned window in the thirteenth century. Again, Mr. Harrod asserts, that in old glass the size of the human figure was never permitted to exceed that of an ordinary man, a statement utterly at variance with the fact. Mr. Harrod next declares, that the subjects chosen are a complete jumble, 'the window beginning with the Nativity, and ending with the Presentation of the Law by Moses;' and informs us that whether an old window 'had five pictures or fifty, they all had some relation to each other.' I believe it would sorely try the ingenuity of Mr. Harrod or any one else, to show the relative connection between the subjects in some old windows I could name; but passing this by, I cannot accede to Mr. Harrod's reading of the subjects in heraldic order, or to the notion that no Scriptural allusion is tolerable which is not directly taken from some Mediæval precedent. I do not presume to enter into an argument on the artistic part of the question, and will content myself with the remark that such of Mr. Harrod's objections on this score as are at all tangible, were anticipated and overruled by the committee, after much time spent in deliberation and personal examination of several old as well as modern windows of various designs. I, therefore, venture to express a belief that the citizens of Norwich, notwithstanding a criticism so oracularly enunciated, may remain satisfied with their window; which many judges, quite as competent as Mr. Harrod, have pronounced to be by far the best hitherto produced in England, and one which vindicates the claim of glass painting to be ranked amongst the fine arts."

JORDAN'S PATENT CARVING-MACHINES.—It may be useful to call the attention of our readers to an advertisement in this paper, announcing the sale, on the 29th instant, of the stock in trade and plant of Jordan's machine-carving works in the Belvidere-road. In the hands of an individual of business habits and acquainted with the trade, such a mode of cheapening the production of carved work of various kinds ought to succeed, the field embraced by the operations of the machine being numerous. To a person wanting premises and a business of this kind, or as an auxiliary to builders, ship-builders, manufacturing upholsterers, sail-block makers, &c. this sale affords an opportunity which seldom occurs.

ARCHITECT TO THE COMPANY OF DRAPERS.—An active canvas has been going on for some time past for the appointment of architect and surveyor to the Worshipful Company of Drapers of the City of London, rendered vacant by the retirement of Mr. W. J. Booth. At the last meeting of the court, held on the 4th instant, Mr. Herbert Williams was elected to the office. We hear that about twenty architects put themselves in nomination, out of which number rather more than half delivered in their testimonials, and proceeded to the poll.

SANITARY MEASURES.—Sir Benjamin Hall has brought in two Bills to the House of Commons, one to alter and amend the Public Health Act, and the other to alter and amend the Nuisances Removal Act. Sir Benjamin stated, that should these Bills pass the second reading, he should then move that they be referred to a select committee, in order that they might both be considered fully in detail by gentlemen practically acquainted with the operation of the law, from whom valuable suggestions might be expected. It is of the utmost importance that this should be the case.

THE OPERA-HOUSE AT BRUSSELS has been destroyed by fire, including all the decorations and costumes. The correspondent of the *Morning Advertiser* says, "The theatre was built in 1817, from designs of the architect, Dumesme, and recently rebuilt at great expense. Indeed, the new theatre was considered one of the richest and most tasteful in Europe. The *bas-relief*, by the Belgian sculptor, Simonis, adorning the pediment, which was finished but a few months ago, has been remarkably spared, and yet remains suspended upon the tottering walls."

MEXICAN ANTIQUITIES.—There is a curious collection of Mexican antiquities now exhibiting at 57, Pall-mall, consisting chiefly of specimens of pottery. It appears that during the invasion of Mexico by the United States, the government ordered the construction of trenches and fosses for the protection of the city; and it was during the excavations carried on for this purpose that the antiquities in question were obtained by Mr. Young. It is presumed that the waste ground now forming the suburbs of Mexico was originally covered with houses and streets, and that the vases, images, and symbolic sculptures, which have now been resuscitated, were buried by the inhabitants at the time of the Spanish conquest. Serpents appear in the collection throughout, sometimes in a coiled or quiescent state, and sometimes erect, or in conjunction with the effigies of the priests and kings, whose cunning and wisdom it was probably their function to symbolise. The vases are curious, and the variety of pattern is as copious as it is diverse. There is a rude monument of a Teocalli, or Temple, consisting of three stories above the basement, each story being a reversed truncated pyramid. No. 247 is one of the finest of the vases: it represents a large black snake coiled on the back of a tortoise, and holding the head of the tortoise in its mouth: its own coils form a vase. Some of the specimens show Egyptian influence.

THE NEW COMMISSION OF METROPOLITAN SEWERS.—A general court was held on 16th inst. Sir John Shelley brought into special notice a subject to which we have strenuously drawn attention, namely, the fact that the Commissioners of Sewers are virtually and actually not Drainage Commissioners. Mr. Thwaites added a new instance of what we have also pointed out,—that tenants will rather submit to be without drains, and to suffer from all the abominations of cesspools, than set what little *passive* power the commissioners may have to work for the amendment of these crying evils. Something *must* be done about it—that seems very clear. A discussion was then begun on the ventilation of sewers, which continued for five hours, and was then adjourned.——At an adjourned meeting, held on Monday, 22nd, the court agreed, *nem. con.* to adopt the plan of low level sewer and branches for the drainage south of the Thames, proposed by the late Mr. Frank Forster, and for parts of which tenders had previously been obtained. The unanimity which prevailed in a court of incongruous opinions, has been ascribed, to a great extent, to our article of last week.

THE PATENT ARCHITECTURAL POTTERY, HAMWORTHY (POOLE).—On 11th inst. were completed and opened, with ceremonial and feasting, the pile of buildings and machinery at Hamworthy, to be called the "Patent Architectural Pottery," and in which all articles of pottery made use of in facing (or flooring?) houses or other buildings, on improved principles, such as those exemplified by H.R.H. Prince Albert, in the model cottages at Hyde-park, are to be manufactured. The builder of the machinery was Mr. James Gregory, of Kingswood, engineer; and the whole of it was executed by Messrs. Kirk and Co. of Shelton, Staffordshire. The contractors for the erection of the premises were Messrs. W. Curtis, and G. Gollop, of Poole. The buildings, which cover about an acre of ground, were executed under the direction of Mr. R. Scrivener, of Shelton, architect. The engine-house and large chimneys are built of red bricks, ornamented with white. The clay stores and other principal parts of the building are of white bricks, ornamented with red.

EDMONTON CHURCH.—The interior of the 'Parish Church of Edmonton," is now undergoing a thorough repair. As the walls are now stripped of the white-wash, and some parts which have the marks of antiquity, in the material used and manner of building, are now exposed to view, an examination might be useful.

NEW MODE OF PROPELLING STEAMERS. Davies's patent railway-floats for propelling vessels consist of a series of float-boards inside a chamber or recess let up into the bottom of the vessel—a sort of double-keel one-third of the way along from the stern. These float-boards are carried on an endless railway, in two horizontal lines inside the chamber. When propelling they are vertical, and they return above horizontally to renew their action, and then offer but little resistance to the water. Thus, half the number are always propelling. The float-boards, in changing their position, "feather" without jerk or blow, the upper edge going first. As soon as a float-board descends, it acts upon all the water confined in the chamber, and, as it cannot escape by the sides, or above the float-boards, it must necessarily all be carried through the opening at the stern, against the heavy pressure of water from without, or carry the vessel rapidly onward. Competent engineers are said to have admitted that this "confining of the water will give to the action of the float-boards the same effectiveness as if they pressed against a dead-wall."

THE KILKENNY ARCHÆOLOGICAL SOCIETY.—The annual general meeting of the Kilkenny and South-east of Ireland Archæological Society was held in the society's apartments, Patrick-street, Kilkenny, on Wednesday in week before last, the Rev. Dr. Browne in the chair. No less than 35 new members were elected, many of them from Youghal, where a new secretaryship of the society was appointed. The Rev. J. Graves, the hon. secretary, then read the annual report for 1854, which stated that 126 new names, including that of the Earl of Rosse, had been added to the muster-roll since last report. The roll of the society's members now amounted to 536 names; but the objects of the society could not fully be carried out until it at least numbered 1,000. The transactions for 1852, extending to 176 pages, with numerous illustrations, had been issued. The Transactions for 1853, completing the second volume, were nearly ready; whilst the Proceedings and Transactions of the past year, forming the first portion of the third volume, and extending to 206 pages, and largely illustrated, had been completed and issued to the members. Steps had been taken to stamp the Transactions as a newspaper, in order to facilitate their transmission through the post. The report was unanimously adopted. Various articles of archæological interest were then exhibited, and papers were read, by Mr. Prim, on the Ancient Militias of the City of Kilkenny; and by Mr. E. Fitzgerald, the Society's new secretary at Youghal, on the newly-discovered Ogham in the Oratory of St. Declan, Ardmore; and on some Acoustic Vases and other Relics discovered in the Church of St. Mary, Youghal.

THE IRON TRADE.—Writing on 20th inst. the Birmingham trade correspondent of the *Times* says that "the abortive meeting of the makers of pig-iron, held at Wolverhampton on Wednesday (at which nothing was done), has created considerable dissatisfaction among a portion of the trade. It was hoped that the makers would unanimously agree to reduce their produce, but for various reasons dissensions prevailed, and each master, in the end, was left to 'do his best for his own particular connection.' Cold pigs have, it is stated, been sold as low as 5*l.* 5*s.* if not 2*s.* 6*d.* per ton lower, while hot-mine are at from 4*l.* 5*s.* to 4*l.* 15*s.* Stocks of pigs are represented to be low in consequence of many of the manufacturers keeping their forges at work while the mills are short of orders. The question of wages, now an important reduction of prices has taken place, has become a prominent subject of discussion; and unquestionably it seems scarcely reasonable that masters should pay for labour, when iron is at 9*l.* at the same rate as when it was 12*l.* per ton. If so, and iron at 9*l.* per ton, with a great increase in the price of raw materials, be remunerative, the profits of the ironmasters when receiving 12*l.* must have been very great." If "masters" *will* persist in pushing up prices beyond all available limits, why should not they be made to *pay for it* in a persistance of the wages which they themselves thus led their workmen to insist upon? "The proceedings at the late preliminary and subsequent quarterly meetings of the trade," continues the *Times* correspondent, "have, without doubt, so far as we can learn, tended most materially to shake public confidence in the decisions of these assemblages. The association is looked upon by a great portion of the trade in the light of a combination; and it is apparent, as upon the present occasion, that, like all other combinations, the resolves of its members, from internal discords, become comparatively inoperative and ineffective even among themselves. However it may have been formerly, the trade generally will not be guided by the prices announced at quarterly meetings, but, like other trades, regulate their rates according to existing exigencies and demand." Our self imposed task, then, of showing up the mischievous and deceitful as well as gambling nature of these meetings, which we have alone steadily done ever since they were in high and universal repute some years since, has at length been happily accomplished.

"A MATERIAL WANTED."—Your correspondent, "S G. O.," will find Ransome's patent stone such a material for his shop front as will answer his purpose.—T.

SUNDAY TRADING IN LONDON.—Messrs. Rivington, of Waterloo-place, have issued a shilling pamphlet, by "A Layman," in which the extent, evils, and needlessness of Sunday trading in London, as detailed in the Parliamentary evidences of 1832, 1847, and 1850, and other documents, are considered, together with the measures required for its gradual suppression. Besides this useful and readable abstract from tedious blue books, there is a prefatory letter to the Bishop of London, on the subject. The whole, we hope, may be of some service in putting an end to a great evil. The author himself is hopeful that a moderate bill for the suppression of Sunday trading may be passed by Parliament before the present year is at an end.

THE WATER-WORKS AT HAMPTON.—By an Act passed in 1852, the Metropolitan Water Companies are compelled to make certain changes in the service and mode of supply within a certain limited period. The West Middlesex, the Grand Junction, and the Southwark and Vauxhall, have their new works contiguous to each other, on the north bank of the Thames, immediately above the village of Hampton, 22 miles above Vauxhall-bridge. From this point the water is brought by the companies to their several works for deposit, filtration, and distribution by three great mains—two of 36 inches and one of 33 inches diameter. These mains are together capable of bringing 60,000,000 gallons in the twenty-four hours. The *Illustrated News* gives a view of the works, and the following particulars:—"As far as the village of Twickenham the mains lie side by side: there the Grand Junction main diverges through Isleworth and Brentford to the works of that company near Kew-bridge. The two other mains, after being taken under the bed of the Thames at Richmond, separate at Sheen. The West Middlesex main goes through Mortlake to their reservoirs of deposit and filtration at Barn Elms, on the Surrey bank, opposite to, and connected by a main under the Thames with, their works at Hammersmith. The Southwark and Vauxhall main continues through Putney and Wandsworth to the site of that company's works in the new park at Battersea. The length of the mains respectively is as follows:—The Southwark and Vauxhall, 13¼ miles, or 23,000 yards; the West Middlesex, 8¼ miles, or 15,000 yards; the Grand Junction, 7½ miles, or 13,500 yards. The aggregate area of the sites of the works of the three companies, at Kew-bridge, Hammersmith and Barn Elms, and Battersea, is 120 acres. The reservoirs and filter-beds at the works of all the companies are completed. The engine and boiler houses at Hampton are roofed in, and ready to receive the machinery, a considerable portion of which is on the ground, and now fixing. The length of mains laid on is as follows:—The Southwark and Vauxhall Company, 12,500 yards; the West Middlesex Company, 14,500 yards; the Grand Junction Company, 7,500 yards. In this statement of the mains laid is comprehended the portion of the two 36-inch mains laid under the bed of the Thames at Richmond." The daily delivery of water to London during the last few months, according to our authority, has fallen little short of 100,000,000 gallons.

LECTURE BY LORD CARLISLE, AT BRADFORD.—A long-expected lecture "On the Poetry of Gray," by the Right Hon. the Earl of Carlisle, was delivered in St. George's-hall, Bradford, on Thursday evening in last week, on behalf of the Early Closing Association there, and is fully reported in the local *Observer*. A large and respectable audience assembled. The stalls and area were well filled, and included the principal families of the neighbourhood. The attendance in the gallery was only scanty. There were more than 2,000 persons however present. His lordship, in introducing his subject, said,—when I delivered a lecture to your neighbours at Leeds, I chose for my subject the poetry of Pope. I have chosen for my subject to-night the writings of Gray. Why Gray? it may be asked. I have myself admitted, when I had to speak of Pope, that upon the British Parnassus were loftier names than even his. Why, then, do I seem to descend even lower, instead of mounting higher among the sacred band? In the first place, I may feel that to descant adequately upon Shakspere or Milton would seem to demand gifts and powers more nearly approaching to their own, just as to write worthily of Socrates it required no less than Plato. Next, the endeavour, with whatever success, has been much more frequently made; and besides, the strongest personal impulse I could feel led me first of all to Pope, next to Gray; and I am quite confident that he is worthy enough for you to hear, and more than worthy enough for me to speak about. If I was forced to compare his style and genius with those of any other great writer, I believe I should select Virgil,—the same unerring delicacy of taste,—the same appropriate but not exaggerated loftiness of diction, the same elaborate and exquisite workmanship. Sir James Mackintosh says that "Of all English poets he was the most finished artist."

WORKSOP ABBEY GATEWAY is one of the oldest examples of architecture, and forms one of the chief objects of interest in the neighbourhood. The building consists of one large room over the archway, and which is now used for the purposes of a Sunday and day school. The walls are composed of magnesian limestone, of which material the church adjoining was formerly built; and it is to be regretted that the repairs which took place some few years back, could not partake of the same character. As I have ineffectually endeavoured to ascertain who the architect was, and the precise date, I should be glad to obtain through your columns some particulars as to its origin. F. M. B.

AMERICAN PATENTS.—From the usual lists published in the *Journal of the Franklin Institute of Pennsylvania*, we glean the following recently announced.—For an Improvement in Machines for carving Marble, Stone, &c. William J. Casselman, Assignor to Elias A. Swan, Vernon, New York. Claim.—1st. Adjustable blocks on a revolving wheel for determining the position of the cutting-tool, either horizontally or vertically, in combination with a revolving or reciprocating bed. 2nd. Communicating motion from a pattern wheel or wheels, with adjustable patterns, both on the circumference and on the sides, to the sliding-tools, by means of levers so set and operating as to place the said tools in the required position as the parts move, as specified. 3rd. A cutting tool or tools with blades or tools attached to the bottom and side of the stock, which stock is so fitted as to receive a rotary motion, to operate as specified.——For an Improvement in Bridges. Samuel Champion and Thomas Champion, Washington, D.C. Claim.—The combination of tubular braces or struts, made smaller by gradation, or tapering as they extend from the pier or support, with suspension-rods also made smaller by gradations, or tapering as they extend from their pier or support. Also the arrangement of oblique struts between the centre post and horizontal strut, and of the suspension-rods placed in lines radiating from a common centre, in such manner that each suspension-rod shall extend from the top of the column or post over the pier or support, to the foot of one of the clamp-posts, while each oblique strut shall extend from the foot of the post over the pier to the head of each clamp-post. Also the construction of tapering tubular struts of bridges of not less than two concentric sheets or thicknesses of metal, the sheets of each layer abutting, and those of one layer breaking joints with the next. ——For an improved Mode of securing Staples to Walls. Jordon L. Mott, Mott Haven, New York. Claim.—Forming the anchor of a block cast on to the shank of a wrought-iron staple or eye, and provided with a thin wing having flanches or ribs all cast and forming one substance with the block, whereby the cast-iron part shall hold the shank firmly, and at the same time become an integral part of the masonwork, and be firmly held therein by the superincumbent weight.——For an Improvement in Windows. Mark A. Heath, Providence, Rhode Island. Claim.—Inserting, in either side of the sash, a flexible expanding strip, formed in lengths, jointed or otherwise pliantly secured together, so that the sash is made to slide smoothly in the frame, the several lengths of the strip expanding and contracting to accommodate themselves to inequalities in the grooves in which they slide, for the purpose of forming a close joint between the sash and the frame.

COLCHESTER CEMETERY COMPETITION.—At a meeting of the Burial Board, held at the Town-hall, on Monday, the 15th instant, after an examination of the plans (twenty-four in number), the designs of Messrs. Law and Edwards, of London, were finally decided upon.

LONDON AND BRIGHTON RAILWAY.—The progressive increase of traffic on this railway during the last few years, says the *Brighton Gazette*, has produced a corresponding increase in the extensive works at the Brighton terminus. Several new shops have been built, and there is still further call for an extension of the works, which will be carried out as soon as sufficient space can be procured. In 1847 the company were paying about 700*l.* per week for wages; now they are paying more than double that amount, the number of workmen exceeding 1,000. All the carriages and the locomotive engines are manufactured in Brighton. Some of the best workmen in England are employed there. During the past year ten new engines have been built, and it is expected that the number to be finished this year will far exceed that of last year. Latterly, there has been a great improvement in the second-class carriages, cushioned seats and backs being introduced, and they are also much more commodious than the old pent-up second-class carriages. Even in the first-class carriages a considerable improvement has been shown by the space between the seats. There is one interesting feature connected with these railway works, and that is the library, which is supplied with above 2,000 volumes. In this establishment the men and apprentices have an opportunity of learning writing, arithmetic, and drawing: each Saturday evening a concert takes place for their recreation; and, since the opening of this library, the entertainments afforded by the company, by means of an instrumental band and a stringed band, &c. have had the effect of weaning many a man from the low and more grovelling attractions of the beer-shop. The subscription is low, only 1s. 1d. per quarter. The Great Western Company, we believe, started the idea of forming a library for the workmen, and we understand that there are only a few stations where the example has been followed.

THE JERSEY GALLERY OF ART AND SCIENCE.—At a general meeting of the subscribers to this gallery, held on Friday week, under the presidency of Dr. Brohier, Mr. H. L. Manuel, the treasurer of the Institution, according to the *Jersey Times*, produced a report, which showed a considerable falling off in the number of subscribers, and a financial deficit of above 30*l.* It was resolved unanimously, to make an appeal to the good taste and intelligence of the community, in favour of the Institution; or failing that, to petition the States to vote an annual sum in aid, or take the Institution under their own absolute control—its antiquities, pictures, &c. &c. to be placed under their exclusive keeping; otherwise the property to be sold to pay the debts.

LECTURES AT MARYLEBONE LITERARY INSTITUTION.—Mr. Luke Burke, the editor of the *Ethnological Journal*, is delivering a course of lectures on interesting subjects at this Institution. The first related to Cyclopean monuments of Southern Europe and Asia Minor, which in his opinion prove Greece and Italy to be older than Egypt. The lecturer's views are curious and worth hearing. His next was to be on 25th inst. and the last on 1st proximo.

PROPOSED AMALGAMATION OF THE METROPOLITAN GAS COMPANIES.—A Parliamentary Bill, we hear, has been printed, whereby it is proposed to amalgamate the metropolitan gas companies, who, on its passing into law, will of course distribute the several districts of gas-consuming metropolitans amongst themselves respectively, so as to avoid mutual competition, and appropriate the whole, as if it were so much territory acquired by conquest, which they could tax as they pleased, for their article of manufacture, at least till the electric or some other new light "puts out the gas."

THE STANLEY LIBRARY AT LYNN.—This library was opened on Monday in last week, and, as anticipated, there was a considerable run on the stores of literature and science thus placed at the command of the public. The department of novels and "light reading" of course experienced the greatest pressure; but the supply was far more than sufficient to meet the demand of 250 applicants. On the Tuesday, only about fifty or sixty subscribers applied. The library and reading-room have both been fitted up comfortably. The walls are hung with a selection of Wyld's largest and best maps; and a pair of globes are proposed as an addition to the useful and ornamental furniture of the library.

TENDERS

For new Jubilee Schools, about to be erected at Walworth, for Rev. George Clayton; Messrs. Habershon, architects:—

Rowland and Evans	£1,640	0	0
Cooper	1,498	0	0
B. and C. Hayne	1,449	0	0
Clever and Stanger	1,420	0	0
Harmer	1,384	0	0
Wilson	1,365	0	0
Thompson	1,330	0	0
Tolley	1,277	0	0

For finishing a house at Reigate, for Mr. Samuel Jackson. Quantities supplied by Mr. Jarvis:—

Gammon	£1,495	0	0
Ryder	1,480	0	0
P'Anson	1,376	0	0
Wilson	1,270	0	0
Colls and Co.	1,249	0	0
Tarrant (accepted)	999	0	0

TO CORRESPONDENTS.

"*Roofs of Farm Buildings*."—Could you or any correspondent suggest any idea to supersede the present system of roofing with wood and tiles or slates for farm buildings? After high winds we have slates blown off, or the timber (often cut on the property) settles, or shrinks, or rots. Is there any sort of brickwork with bricks shaped so as to act as roof and tiles? (Farm buildings have been erected covered with hollow-brick arches, we believe satisfactorily.

"H. and Co." Copenhagen (we shall be glad to hear from A. P. H.). "T. B." "Mr. W." (received). "J. R." "Mechanicus" (such propositions cannot be *guessed*; they must be worked out). "R. H." "J. G." "E. G. and Co." "W. W." "G. H." "C. and Co." "F. and H. F." "W. H." (thanks). "G. B. W." "C. W." "E. L. T. (we do not propose to print remainder; note shall appear). "S. F." (we shall try to pay a visit some night). "G. G." "M. T. O'K." "E. D. H." "J. M." "Non competitor." "G. W." "J. M." (at Crystal Palace). "S. C. F." (we have received a statement to a different effect). "Pro Rata" (is in type). "X. Z. Y."

"*Books and Addresses*."—We are forced to decline pointing out books or finding addresses.

ADVERTISEMENTS.

PARIS EXHIBITION.—Descriptive, Mechanical, Architectural, or Ornamental Drawings Prepared, Lithographed, or Engraved on Wood, for exhibition or circulation at Paris Exhibition. Agents in Exhibition Building at Paris.—Address, P. E 97, Newgate-street.

TO PUBLISHERS AND AUTHORS.

THE Architectural Societies of Northampton, York, Lincoln, and Bedford, have resolved to submit in their annual associated volume of Reports and Papers, Advertisements relating to Architecture and Archæology, embracing decorative art, family and local history, ancient tradition, numismatology, &c. Terms for advertising: Five lines and under, in columns, 1s. 6d.; each line beyond five, 3d.; half column, 5s.; column, or half page, 8s. 6d.; whole page, 15s. To secure insertion in the ensuing volume, address immediately, Rev. H. E. BATTY, General Advertising Secretary, Ackworth, near Pontefract.

TO PARENTS AND GUARDIANS.

AN ARCHITECTURAL FIRM, in the west end of London, having several important public and private works in hand, have a VACANCY for an ARTICLED PUPIL. One of the firm being an artist, a peculiarly eligible opportunity presents itself for any youth having a taste for drawing, and who may be desirous of perfecting himself in that particular branch, combined with a thorough practical knowledge of architectural landscape gardening and ornamental arrangement of estates for building purposes. Reference given to works in course of erection, and a liberal premium required.—Address to A. B., care of N. Wehnert, Esq. Solicitor, 4, Bernard-street, Russell-square, London.

AN APPRENTICE WANTED, to learn the trade of an ENGINEER'S PATTERN-MAKER. A lad who has worked at the bench preferred. No premium required.—Apply at No. 2, High-street, St. Giles's.

BOROUGH SURVEYOR WANTED.

WANTED by the Town Council of the Borough of WARRINGTON, an EXPERIENCED SURVEYOR of PAVING and DRAINAGE. He will be required to devote the whole of his time to the duties of his office, viz. to take levels and dr w plans, sections, specifications, and estimates for Sewerage Works, and the laying out and repair of streets, and with sufficient knowledge of Building to advise on, and carry out, the building regulations of the Warrington Improvement Act, and generally to superintend the paving, macadamizing, sewering, and scavenging of the Borough. Salary not exceeding 350l. a year. Three months' notice to be given before terminating the engagement.—Applications with testimonials and amount of salary required, to be sent on or before the 6th FEBRUARY, addressed to the Chairman of the Paving and Sewerage Committee, Town Hall, Warrington.

WANTED, a respectable Youth, as IN-DOOR APPRENTICE, to learn the Smithing trade in general; to be treated as one of the family. A moderate premium required. -Apply to Mr. J. SIMS, Lesnes-heath, Erith, Kent.

WANTED, a Man as GANGER, who thoroughly understands the management of men in road-making, sewers, and other excavations.—Address, post paid, to W. A. T., Office of "The Builder," stating wages expected by the week, or standing, and where last employed.

TO BRICKLAYERS.

WANTED, a WORKING FOREMAN, who has a good general knowledge of the business.—Address, post-paid, to O. P. Q. office of "The Builder," stating wages expected, and where last employed.

TO CIVIL ENGINEERS.

WANTED, to proceed to India, a Gentleman capable of SUPERINTENDING the CONSTRUCTION of FIFTY MILES of RAILWAY. No Surveyors need apply.—Address, stating references and terms, to Mr. THORPE, 1, Bishopscourt, City.

TO BUILDERS.

WANTED to place a respectable Youth in a Builder's Office, in London. He writes a good hand. No salary required.—Address, A. B. 108, Borough-road.

TO BUILDERS AND OTHERS.

WANTED, by a Young Man, aged 28, a SITUATION as PLUMBER, PAINTER, and GLAZIER.—Address, K. T. 36, Great Union-street, Borough-road

WANTED, a SITUATION as FOREMAN to a TIMBER MERCHANT, or to SUPERINTEND SAW-MILLS, in town or country.—References may be had by applying to BARRETT, ESCALL, and ANDREWES, Engineers, Reading

TO ARCHITECTS OR BUILDERS.

WANTED, by a Young Man, who can produce the highest testimonials, a SITUATION as CLERK of WORKS, or Assistant in either of the above offices. He is a good draughtsman, and thoroughly acquainted with builders' accounts.—Address, A. B. Mr. Ward's, Lower Clapton, Middlesex.

WANTED, a SITUATION as Ironmonger's PORTER; thoroughly acquainted with the nail and black ironmongery, castings, &c. or as Store-keeper to a Builder.—Address, J. G. 16, Obelisk-yard, St. George's-circus, Southwark.

WANTED, by the Advertiser, a SITUATION as FOREMAN of JOINER'S SHOP. He now fills a similar appointment. Good references. Direct to B. B to be left at Mr Braden's, Post office, High-street, Islington, till called for.

WANTED, by a Practical Man, a SITUATION on a gentleman's estate, as SURVEYOR of HOUSE and general BUILDING PROPERTY.—For particulars, direct to A. M. Sun Coffee-house, 96, Cannon-street, City, London.

TO CONTRACTORS, BUILDERS, &c.

WANTED, by a Young Man 25 years of age, who has had several years' experience as General Clerk and Bookkeeper, a similar SITUATION, having just terminated an engagement upon public works. Reference excellent, and a moderate salary will suffice.—Address, A. B. 10, Charlotte-terrace, Copenhagen-street, Pentonville

TO BUILDERS, &c.

WANTED, a RE-ENGAGEMENT, by a steady, respectable Young Man. Is a good plain Draughtsman, with some knowledge of taking off quantities; understands book-keeping, and the routine of a Builder's office. A carpenter by trade; aged 28; would be willing to make himself useful. Country not objected to. Good reference from his last employer.—Address, G. P. 10, St. Andrew's-terrace, Rhodeswell-road, Limehouse, London.

TO BUILDERS, PAINTERS, AND DECORATORS.

WANTED, a SITUATION, by an active Young Man, as GRAINER, having a thorough knowledge of Painting. Would undertake the care and management of jobs, as where last employed.—Apply, post-paid, A. B. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

WANTED, by a YOUTH, aged 17, a SITUATION in either of the above offices, having been engaged the last two years in an Engineer, Contractor, and Builder's Office; can copy, reduce, and trace drawings, square dimensions, check abstracts, measure work, and make out general accounts. Unexceptionable references can be given by his last employer; salary not so much an object as a comfortable situation.—Address, W. H. J. Office of "The Builder."

TO GAS AND WATER COMPANIES.

WANTED, an ENGAGEMENT as SUPERINTENDENT or MANAGER by a gentleman, who is thoroughly conversant with the management of gas or water works, is a practical engineer, and has had considerable experience in the construction of both gas and water works. Aged 34. No objection to go abroad.—Address, J. C. J. Water Works' Office, Norwich

TO ARCHITECTS, &c.

THE Advertiser, of considerable experience, will be happy to render ASSISTANCE in preparing finished, perspective, and working drawings, &c. for Gothic or Italian works.—Address, H. H. Office of "The Builder."

THE Advertiser, who is a good Draughtsman, and accustomed to Working Drawings of all kinds, is desirous of an ENGAGEMENT in an Office, or to superintend Buildings as Clerk of Works, in which capacity he has had some experience.—Address, A. R. Z, 7, Upper-Park-street, Greenwich.

TO ARCHITECTS AND SURVEYORS.

OCCASIONAL ASSISTANCE.—A qualified ASSISTANT, of eleven years' experience, is desirous of affording temporary assistance to the Profession, at their offices or his own residence. Address, A. B. Kettle's Newspaper Office, Little Queen-street, Holborn.

TO ARCHITECTS, &c.

AN Artistic Colourist, Draughtsman, and Designer, offers his services in the preparation of Perspective Views, with landscape and figures, also in general drawing on moderate terms.—Address, A. Z. 61, Denbigh-street, Belgravia.

AS BUILDER'S CLERK.—A Young Man who has had ten years' practical experience would be glad to hear of a RE-ENGAGEMENT.—Address, W. H. L. 13, Baker-street, Lloyd-square, Pentonville.

A PERSON, well acquainted with the Metropolitan Buildings' Act, having been many years in a District Surveyors' Office, is in want of a SITUATION.—Apply, S. T. Office of "The Builder."

TO ARCHITECTS.

AN ARCHITECT'S ASSISTANT, thoroughly competent to prepare finished and working drawings, perspective, &c. with some knowledge of surveying, is desirous of a RE-ENGAGEMENT. Unexceptionable references can be given.—Address, R. E. C. Post-office, Norwich.

TO ARCHITECTS.

A GENTLEMAN of great experience is open to an ENGAGEMENT as an ASSISTANT in an ARCHITECT'S OFFICE.—Address to G. G. 1, Brunswick-place, Brompton.

A FIRST-RATE DRAUGHTSMAN, who thoroughly understands landscape and figure drawing, inclusive of architecture, is desirous of an ENGAGEMENT He has studied anatomy and botany as applied to the arts, and has a complete knowledge of every description of enrichment and ornamentation. Two guineas.—Address ALPHA, at Mr. Higham's, 21, Goswell-street.

TO ARCHITECTS, &c.

AN Architectural Assistant, with about fifteen years' experience, offers his services in getting up working and detail drawings; understands isometrical, perspective, and colours, with many other useful branches of the profession, which has been gained by a varied practice in some of the best London offices.—Address, L. G. 40, Elizabeth-street, Eaton-square, Pimlico

AN Architectural Draughtsman desires a RE-ENGAGEMENT in town. Has been accustomed to the getting out of perspective, finished, working, and detail drawings, and the general routine of an office. Salary moderate.—Address, A. B No. 9, Elizabeth-street South, Pimlico.

AN Architect is in want of TEMPORARY ASSISTANCE in preparing WORKING and OTHER DRAWINGS.—Apply, by letter, to ALPHA, Office of "The Builder," stating qualification, reference, and remuneration expected.

A YOUNG GENTLEMAN who has served his articles with an Architect, wishes to obtain a SITUATION, either in an Architect's or Builder's Office. Good testimonials can be produced.—Address, G. P. C. Post-office, Gosport.

A FOREMAN of a London Shop desires to meet with a SITUATION in the country, as FOREMAN of CARPENTERS and JOINERS. He has a good knowledge of the building line, in all its branches. The most unexceptionable references can be given. For particulars, direct to L. M. Sun Coffee-house, 96, Cannon-street, City, London.

TO ARCHITECTS, CIVIL ENGINEERS, AND OTHERS.

A YOUNG MAN, aged 22, desires a RE-ENGAGEMENT. He is a good draughtsman and mapper, can take out quantities, and understands bookkeeping by double entry. Salary moderate.—Address, X. Y. Mr. Lowe's, Law Stationer, Bell-yard, Temple-bar.

TO ARCHITECTS.

A YOUNG MAN, who has been six years in the profession, would be glad to meet with an Architect who requires ASSISTANCE in DESIGNING or CARRYING OUT WORKS. Has a good knowledge of both the Italian and Gothic styles of architecture.—Address, SPES, care of Mr. Farr, 5, Tenison-street, Waterloo-road, Lambeth.

A CARPENTER, of sober and industrious habits, wishes to ENGAGE himself to some gentleman who is in possession of house property in or about London, to see after the repairs. He is fully competent to undertake the situation, and can be well recommended. Salary not so much an object as a comfortable situation.—Please direct, post-paid, C. E. No 2, Sarah-place, Kingsland-road, London

TO ARCHITECTS AND SURVEYORS.

A COMPETENT ASSISTANT is desirous of occasional or constant occupation, either at the office of employer, or his own residence.—Address, EPSILON, Office of "The Builder."

A DRAUGHTSMAN desires EMPLOYMENT after Four p.m. in making fair drawings, or from sketches, engineering or architectural. He is a good colourist; can also plot field notes quickly, and is accustomed to the general routine of engineers, architects, and surveyors' office work.—A. B. 23, New Bridge-street, Blackfriars.

TO PROPRIETORS OF SAW-MILLS AND TIMBER MERCHANTS.

PARTNERSHIP.—The Advertiser, who has a powerful plant of machinery, about fifty miles from London, excellent premises, and ample room for conducting an extensive sawing and timber business, is desirous of meeting with a PARTNER. One acquainted with the timber trade or building would be preferred. Capital required about 400l. or 500l.—Address, Mr. J. LEE, Engineer, Stonpall, near Walsall.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Thavies-inn, Holborn (between 1 and 3½ p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

THE ARCHITECTS', BUILDERS', CIVIL ENGINEERS', and MACHINISTS' DRAWING ESTABLISHMENT, for giving practical instruction in Architecture, Civil Engineering, Measuring, and Valuing Buildings, Land, &c.; also for teaching Architectural, Mechanical, and Water-colour Drawing of every description. Morning Classes, Ten till Four; Evening ditto, Six till Nine and Seven till Ten. Saturdays excepted. Detail prospectuses to be had on application at the Offices, 15, Old-street, City-road. The pupils forming these classes are chiefly the sons of some of the first architects and builders in the metropolis. See "Educational Expositor," Jan. 1855.

THOMAS J. HILL, Architect, Conductor of the Classes.

ARCHITECTURAL ASSOCIATION.—On FRIDAY, FEBRUARY 2nd, a SPECIAL MEETING will be held, to take into consideration the present position of the Association.

The Class of Design meet February 9th. Subject for sketch—"A bay window, three stories high."

ARTHUR CATES, } Honorary Secretaries.
T. W. GOODMAN. }

Lyon's Inn Hall, Strand.

ARCHITECTURAL and CIVIL ENGINEERING CLASSES, OPENED, for the instruction of pupils, at one guinea per quarter, which includes drawing materials, instruments, colours, paper, drawing-boards, T squares, &c. and instruction in architectural and civil engineering, drawing and colouring, making tracings and working drawings, preparing specifications, taking out quantities, estimating, &c. &c.—For prospectuses, apply to Messrs. HYDE, SMITH, and LEWIS, Civil Engineers, Architects, Surveyors, &c. 24, Guildford-street, Russell-square.

PHOTOGRAPHIC DELINEATIONS of the SCENERY, ARCHITECTURE, and ANTIQUITIES of GREAT BRITAIN and IRELAND
By RUSSELL SEDGFIELD.
Part IV., price 21s.
London: SAM. HIGHLEY, 32, Fleet-street.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth near Astley's Theatre, begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. A detailed price-list will be immediately forwarded, free, on application.

CRYSTAL PALACE DECORATIVE ARTISTIC PAINTING.—Messrs. BEENSEN and RUCKUCK, Artistic Decorators to his Majesty the King of Hanover, and executors of the Byzantine Court, &c. Crystal Palace, Sydenham, most respectfully beg to invite the nobility and gentry to their NEW-ARRANGED SHOW-ROOMS, with various specimens of interior decorations for churches, private and public buildings.—Apply at 6s. Hall-mall, from Nine till Five o'clock. Show Rooms, Ground-floor.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at is per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and Co. 80, New Bond-street.

OUTSIDE REFLECTING LANTERNS, for SHOP FRONTS.—J. MOORE, Manufacturer of the above, begs to call the attention of gas-fitters, fitters-up of shop fronts, builders, &c. to his very superior Lanterns for the above purpose, being of the strongest and best make, as well as convenient to repair. Manufactory, 1, Cross-street, Great Sutton-street, Clerkenwell.—Established 1830.

CEILING FLOWERS, and Architectural Enrichments, in PAPIER MACHE, COMPOSITION, AND CARTON PIERRE. WHITE and PARLBY, respectfully solicit Architects, Builders, Decorators, and the trade generally, for their orders in the above-named goods.

Architects' designs modelled free of extra charge.—Designs given for all internal decoration

WHITE and PARLBY, 4, Rathbone-place, London.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TO Builders and Others wishing to Exchange. A PAPER-STAINER, having relinquished manufacturing, wishes to EXCHANGE PAPER-HANGINGS for a HOUSE or GROUND-RENTS.—Address, J. Q. Messrs. Clarke and Co.'s, 6, Great Castle-street, Regent-street.

TO BUILDERS AND HOUSE DECORATORS.

THE LARGEST STOCK of Upholsterer's Clothe, Baizes, and Druggets, in every width, colour, and quality, is kept at HILL and SON'S, 28 and 29, St. Martin's-lane, Charing-cross. Patterns forwarded upon application.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, are on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1859.—In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker." N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

FORSTER and SLATE'S PATENT CONSTANT SUPPLY FILTERS, tested and approved by the first water engineers in the country. Used and approved at the Offices of the General Board of Health. Exclusively adopted by the Crystal Palace Company. Easily cleaned without trouble or expense.—To be seen in operation daily, at J. EVANS and SON'S, Ironmongers, 33, King William-street, London-bridge.

CEMETERIES.—WILLIAM MASTERS and SON having completed extensive cemetery works, are prepared to undertake the LAYING OUT and PLANTING NEW GROUNDS, as well as the ornamenting such as are closed by the recent Act of Parliament, by contract or otherwise.—WILLIAM MASTERS and SON, Landscape Gardeners, Canterbury.

WILLIAM HARRIMAN and CO. FIRE-BRICK and SANITARY TUBE WORKS, BLAYDON, NEWCASTLE-UPON-TYNE.

TO BUILDERS AND OTHERS.

FOR SALE, an excellent Town-made BUILDER'S CART, large size, 6-inch wheels, whole tires, patent arms, and side boards, complete.—For particulars, apply to Mr. RATTEE, Cambridge.

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS,
65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.
MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

TO PLUMBERS, PAINTERS, GLEZIERS, &c

TO be DISPOSED OF, an old-established BUSINESS in the City.—Apply to Mr. JOHNSON, Messrs. Pitchford and Co.'s Island Lead Works, Limehouse.

TO CARPENTERS, BUILDERS, &c.—To be DISPOSED OF, in consequence of the decease of the proprietor, an excellent JOBBING BUSINESS, established above fifty years, in a central part of the metropolis, near the water side, and in the City of London, employing, upon an average, about forty men. There are capacious workshops, counting house, timber-yard, saw-mill, stabling, &c.; well adapted for a first-rate business requiring accommodation for a large staff of men. Apply to Messrs. HAMMOND and ELOART, Estate Agents &c. 28, Chancery lane

TO TIMBER MERCHANTS, BUILDERS, AND OTHERS.

TO be DISPOSED OF, the STOCK and TRADE of the late Mr. Joseph Wardale, deceased, at Newport, Isle of Wight. Any gentleman desirous of being partially engaged in business, and residing in the island, would find this a favourable opening. The timber and deal yard may be rented with or without a convenient residence adjoining the yard. Address to Mrs. WARDALE, Castle View, Newport, Isle of Wight; or to Messrs. DRIVER and SHEPPARD, Timber Merchants, Southampton.

TO BREWERS and DISTILLERS.—An old established and valuable TOWN BREWERY to BE DISPOSED OF, on advantageous terms (well situated for a distillery), situated in Green-walk, Holland-street, Blackfriars, with private residence and tap-house. The plant comprises a twelve-quarter mash-tun, twenty-seven-barrel copper, and 4 corresponding utensils. The plant to be taken at a fair valuation.—Apply to J. B. 22, Bankside Southwark.

A LARGE BUSINESS, with a district Patent Right for working the same, may be purchased at a small outlay. The extensive fixed plant, with two first-rate steam-engines, all in perfect working condition, may be taken on lease for a term of years. A practical enterprising man, with some ingenuity and a capital of 2,000*l.* or 3,000*l.* would find ample scope for extending the business and the further application of the patent to most profitable use. This opportunity arises from a desire on the part of the proprietor to retire from business, and is such a one as seldom offers.—Apply to A. Z. John Bennett, esq Solicitor, 35, Ludgate-hill, London

TO BE DISPOSED OF, in consequence of the illness of the proprietor, a good BUSINESS, with connection throughout the manufacturing and coal district of South Wales. Having the almost exclusive supply use of patent articles in good and increasing demand a slight knowledge of engineering, although not indispensable, would be advantageous.—For particulars, apply by letter, addressed to P. G Post-office, Swansea.

BUILDER'S YARD WANTED, in a light, airy situation, and with stages for timber, within about a mile of Portman-square.—Particulars and terms to X. X. at Mr. Blackwell's, 29, Charles-street, Middlesex Hospital.

SAW FRAMES.—Two SAW FRAMES for SALE,—Apply at St. James's Mills, New Wharf Road, Caledonian Road.

SAW-MILLS and TIMBER TRADE, HANTS, waterside, 200 feet abutting Portsmouth bar-our, and 700 feet from front to rear, with dwelling and other offices, FOR SALE by PRIVATE CONTRACT; coming in about 2,000*l.* half of which may remain unpaid for a term.—Apply to Mr. GAUNTLETT, Ordnance Auctioneer, Portsmouth.

LOANS from 25*l.* to 1,000*l.* upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding fifty months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge street, Blackfriars. Rules 6d. each copy, 1s. per post.
CHARLES JAMES THICKE, Resident Secretary

BUILDERS' ADVANCES OFFICE, for supplying LOANS to BUILDERS, in large or small amounts, on more equitable terms.—Proposals to be made to the Surveyor, Mr. K. KERR, 41, Coleman-street, City.

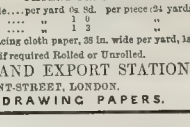
JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.



MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

SMOKE NUISANCE ABOLITION.—TO BE SOLD, an INVENTION which will effect the CONSUMPTION of SMOKE in any open fire grate, at a cost of from three to ten shillings, without altering the external appearance of the stove.—Address, F. J. UTTING, C.E. Wisbech.

SMOKE CONSUMPTION.—FRANKHAM'S NEW PATENT, for consuming smoke and economising fuel, now in operation at the Foundling Hospital and Millbank Prison; it is very effective, cheap, and simple in construction, of great durability, and applicable to every description of furnace.—For license to use or for the erection of the same, apply to Mr. HERRING, Bed-purifying Factory, 377, High Holborn.

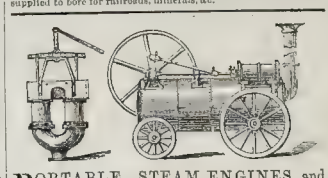
VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and so they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 106, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c



SMOKY CHIMNEYS CURED EFFECUALLY for TEN SHILLINGS, by SUPER'S PATENT WIND-GUARD.—This Guard allows free access to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch street, London.

IMPORTANT NOTICE to ARCHITECTS, BUILDERS, and OTHERS.—CHARLES NOSOTTI, Looking-glass Manufacturer, Interior Decorator, and General House Furnisher, begs most respectfully to inform the above, that, from the extent of his trade, he is enabled to offer pecuniary advantages both in quality and price, to those made or exported out to any extent. An extensive assortment always on hand. Estimates free of charge.—Plate-glass for glazing purposes, at 39s and 39s. Oxford-street

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c.—The nobility, gentry, water-companies, towns, baths, brewers, and manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 19, Cumming street, Pentonville. Pumps and machinery for raising water from deep wells, boring-tools, and well-pipes for exploration. Men and tools supplied to bore for railroads, minerals, &c.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
J. Jubilee place, Holland-street,
Southwark, London

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete, ready for immediate use. Several are ready for delivery, from six-horse power to twenty five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS', Engineers and Portable Engine Makers, 92, Blackfriars-road. These engines have been successfully employed for years.

PUMPING ENGINES.—TO BE LET ON HIRE, TWO PORTABLE STEAM-ENGINES, of three and five horse power, with pumps, complete.—Apply to Mr. HENRY JOHNSON, 11, Bleeding Heart-yard, Hatton Garden, London; and 44, Bread-street, Birmingham.

A STEAM-ENGINE FOR SALE (high-pressure), about 8 horse power, in perfect working condition. Also, a 6-horse BOILER, nearly new.—Apply to Mr. GEORGE THOMPSON, C.E. Nantwich.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS

Patent Pump	£1 12 0
Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing	2 12 0

Longer sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS,
8, CRESCENT, JEWIN-STREET,
LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and marketplaces, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

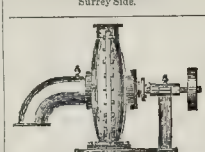
PUMPS on HIRE!—The largest stock in England of single and double pumps, from 4 in. to double 12 in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer,
Hot-water, Steam and Gas Apparatus Manufactory, New Factory, Whitefriars-street, Fleet-street.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, road-makers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

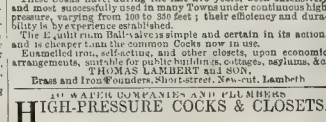
PUMPS ON HIRE



Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s per doz. painted.
Ditto .... 48s. per doz galvanized.



Upper Ground-street, Blackfriars Bridge, Surrey Side.

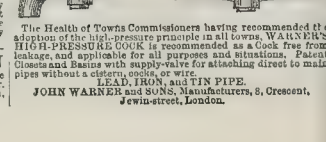
PRIZE MEDAL, CLASS 28.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure of water, varying from 100 to 350 feet; their efficiency and durability is by experience established.



The Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth

THE WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

THE BUILDER.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a careful ly prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

A Monthly Price Current published, and will be forwarded on application.

N.B. Timber Goods received for Sale on Commission, Landed, Warehoused, Sawn, and Carted.

STAINS for DEAL and OAK WOODWORK. J. M. MARSHALL, Upper Parliament-street, Nottingham, having during the last ten years been extensively employed in every description of STAINING, has been induced to commence manufacturing for sale his imitable STAINS at the following prices:—

No. 1.—Imitation Oak Stain, 6s. per gallon.
Nos. 2, 3, and 4.—Walnut, Mahogany, and Satin Wood, 7s. 6d. per gallon.
No. 5.—An exceedingly rich Stain for renewing the appearance of persaned Oak, 7s. per gallon.

Ample directions given so that the most inexperienced may apply them.—Agents wanted.

TO THE CLERGY, AND TO ARCHITECTS, BUILDERS, &c.

STEPHENS'S WOOD STAINS as a SUBSTITUTE for PAINT, and at less than half the cost, and without the disagreeable smell and deleterious consequences of paint, well adapted for Churches, Chapels, Schools, or other public buildings, as well as private dwellings, giving the effect of Oak, Mahogany, or Satin Wood. Those who noticed the Entrance Doors of the Crystal Palace of 1851, which were coloured with these stains, would be struck with their beautiful effect.—Prospectuses, giving full particulars, and specimens sent free to any part of the kingdom.

HENRY STEPHENS, 54, Stamford-street, London.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford-street, also Manufacturer of Improved Knotting and Decorative Varnishes.

By Her Majesty's Royal Letters Patent.

VENEERS CUT for the TRADE (by Knife only), by the PATENT VENEER-CUTTING MACHINE by which process a hundred per cent. benefit is guaranteed upon the ordinary method of cutting veneers.—For particulars of prices, and specimens of work done by the machine, apply to J. CHACK, Sole Patentee, Veneer-cutting Works, 44, Robert-street, Chelsea, adjoining the King's-road Saw-mills.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MUTUAL LIFE ASSURANCE.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.

HEAD OFFICE 26, St. Andrew square, Edinburgh.
LONDON 126, Bishopsgate-street.
Instituted, 1831.
Incorporated by Special Act of Parliament.

The Profits are divided every Three Years, and wholly belong to the Members of the Society. The next division takes place at 1st March, 1856.

EXAMPLE OF ADDITIONS

On a Policy for 1,000*l.* dated 1st March, 1832, 1,232*l.* 8*s.* will be payable if it become a claim during the current year, after Payment of this year's Premium. This is an addition of more than Fifty per Cent. on the Sum Assured, and averages 2*l.* 3*s.* 7*d.* per cent. per annum.

Supposing such a Policy to have been effected at the age of Thirty, the additions might now be surrendered for a present payment of 221*l.* 7*s.* 10*d.* or if applied in reduction of the future Premium, would reduce the Premium from 25*l.* 10*s.* 10*d.* to 6*l.* 3*s.*; and even this small payment must be reduced every Three Years during the subsistence of the Policy.

Amount of existing Assurances	£4,234,598
Annual Revenue	152,615
Amount of Accumulated Fund	632,354

Copies of the Annual Report, Forms of Proposals, and all information, may be had on application at any of the Society's Offices in town or country.

W. COOK, Agent.

126, Bishopsgate-street, London.

MITRE GENERAL LIFE ASSURANCE and ANNUITY ASSOCIATION. No. 21, Pall mall, London. Established 1845; with which is united the Business of the Zoss Assurance Office, late of 41, Moorgate street. Protective Capital, 150,000*l.*

This Society offers the option of Mutual Assurance with Share of Profits; or of very moderate rates under the guarantee of a large protective capital.

The profits are either added to the policy, or paid in cash, or go to reduce the annual premium: while in the Non-profit Branch, the low rates, as compared with those of other offices, are equivalent to an immediate bonus of from 30 to 50 per cent. of the amount assured.

SPECIAL FEATURE.—The annuities granted by the Mitre increase periodically on the mutual system. All expenses of the annuity deed are defrayed by the Association.

WILLIAM BRIDGES, Secretary.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.

WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the premium on insurances of 50*l.* and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 5*l.* and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect insurances with this Company are protected by its subscribed capital of 750,000*l.* of which nearly 100,000*l.* are invested, from the risk incurred by members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

At the close of the last financial year, the sums assured, including bonus added, amounted to	£8,800,000
The premium fund to more than	800,000
And the annual income from the same source, to	105,000

Insurances, without participation in profits, may be effected at reduced rates. SAMUEL INGALL, Actuary.

INDISPUTABLE LIFE POLICY COMPANY.

72, Lombard-street, and 20, Connaught-terrace.

TRUSTEES.

Richard Mallins, esq. Q.C. M.P. | Richard Spooner, esq. M.P.
James Fuller Maddy, esq. | John Campbell Renton, esq.

William Wilberforce, esq.

A reduction of 25 per cent. has been made on the premiums of all policies of five years' standing.

ALEX. ROBERTSON, Manager.

THE ALBERT ASSURANCE COMPANY. (Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square. W. S. VARDY, Manager.

THE PERMANENT WAY COMPANY, 26, Great George street, Westminster, have just ISSUED a PAMPHLET, descriptive of various Patented Inventions for the Permanent Way of Railways, which are adopted and are being applied to more than 3,000 miles of line. On application, a copy will be forwarded by post (gratis) to any parties who are interested in the construction of railways. WILLIAM HOWDEN, Sec.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronized by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Old Fish-street, near St Paul's, London.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES. FREEMAN ROE'S Patent Sluice-valve can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

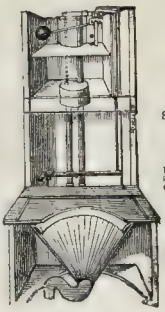
TO WATERWORKS COMPANIES AND OTHERS.

TO be SOLD by PRIVATE CONTRACT, Forty-five 24-inch iron socket pipes, 9 feet long, and weighing 19 cwt. 2qrs. each; four 24-inch 5th bends, 13 cwt. 3 qrs. 26 lbs. each; fifteen 15-inch socket-pipes, 9 feet long, and weighing 9 cwt. 3 qrs. each. For further particulars, apply to the Leicester Waterworks Company, or their Secretary, JOHN LOSEBY, Solicitor, Leicester.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE, MANUFACTURER of superior GLAZED STONE WARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Hadleigh. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

Superior Glazed Stoneware Pipes, Bends Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.



Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
B. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road.

N. B. The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.

January, 1853.

TO ARCHITECTS, SURVEYORS, BUILDERS, CONTRACTORS, AND OTHERS.

MESSRS. CHANY beg to call attention to their large Stock of Water-closets (spring valve and common), Glazed Hopper Basins, Traps, and all articles used in sanitary improvements.—N.B. Plumbers' Brass-work of every description.—34, Clifton-street, Finsbury square.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 15, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

YORK STONE supplied direct from the Quarries.—NOWELL and ROBSON respectfully invite the attention of Architects, Surveyors, Contractors, Builders, &c. to their excellent STOCK of STONE, combining good colour with durability. Samples may be seen at Kennington Basin and the Great Northern Railway Depôt, King's cross. Prices will be sent, and country orders promptly attended to, and delivered at all the Stations on the principal lines of railway, by addressing NOWELL and ROBSON, Quarries, Idle, near Leeds. Purchasers will find the stone of first-rate qualities, and the prices very reasonable.

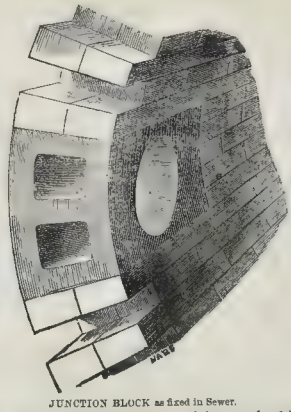
HENRY DOULTON AND CO.'S

PATENT SEWER JUNCTION BLOCKS AND INVERT BLOCKS,

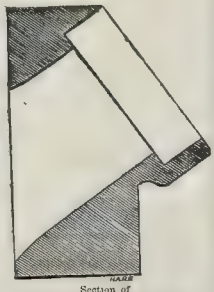
IN GLAZED STONE WARE,

HIGH-STREET, LAMBETH, LONDON.

The connection between pipe drains and sewers, and brick sewers, is made perfect and secure by the use of DOULTON'S PATENT JUNCTION BLOCKS. Each block is made to correspond in thickness with the sides of the brick sewer, so as to build or bond in with the brickwork; the inner surface is made to correspond with the internal figure of the sewer. Each block has a socket, either within its thickness or just protruding beyond it, to receive the end of a pipe. They are made to receive pipes, entering either straight or obliquely. When fixed, they form part of the sewer, they cannot be improperly placed, and a certain and proper fall is secured at the point where the junction is made.

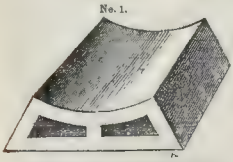


THE PATENT JUNCTION BLOCKS MAY BE FITTED WITH METAL FLAP-TRAPS IF REQUIRED.



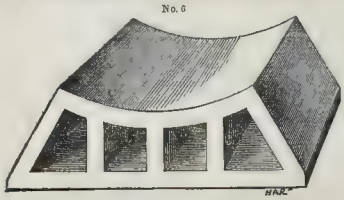
Egg-shape Sewer, with DOULTON'S PATENT JUNCTION AND INVERT BLOCKS

Section of STRAIGHT JUNCTION BLOCK.



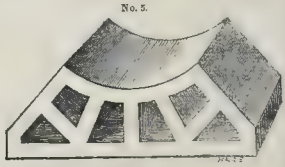
JUNCTION BLOCK as fixed in Sewer.

Section of OBLIQUE JUNCTION BLOCK.



DOULTON'S INVERT BLOCKS, in stone ware, form a glazed, even, and imperishable surface for the bottoms of brick sewers, and also a sure foundation for the structure. They have been used extensively by the Metropolitan and City Commissioners of Sewers, and for the main sewers in many provincial towns, and in all cases have been highly approved by the engineers, both for the facilities they offer in the construction of sewers, and for their subsequent action in permitting an easy and uninterrupted flow of the sewage matter. They offer the means for carrying off all superfluous water while the sewer is in course of construction, and when required give a channel for land drainage independent of the sewage.

No. 1.



Radius of Invert 9" for 15" Circular Sewer, or 3 ft. 9in. by 2 ft. 6 in. Egg-shape. 4½ in. work.

No. 6

Radius of Invert 15" for large Egg-shape Sewer. 9 in. work.

No. 5.

Radius of Invert 9" for 3ft. 9 in. by 2ft. 6 in. 6 in. work.

A full description, with sizes and kinds of both Junction and Invert Blocks, forwarded on application, per post.

JENNINGS'S PATENT DRAIN-PIPES

ENGINEERS AND ARCHITECTS SPECIFYING THESE PIPES TO BE USED, will have the GREAT SATISFACTION of knowing that their DRAINS can at all times be EASILY EXAMINED, or BRANCH DRAINS INTRODUCED, by simply removing one of the plain Saddles, and substituting a Saddle-piece, having a junction in it of the required size.
THE PATENTEE INVITES COMPARISON OF HIS PIPES, WITH ALL OTHERS BEFORE THE PUBLIC.
A List of Public Works, drained by these improved Pipes, with testimonials, will shortly appear.

JENNINGS'S PATENT CLOSETS, TRAPS, SLUICE-VALVES, &c.

ARE FREE FROM ALL COMPLICATION.

ANY NUMBER OF CLOSETS SUPPLIED FROM ONE SERVICE-PIPE, AND THEY ARE AS READILY FIXED AS A COCK TO A SINK, UNDER HIGH OR LOW PRESSURE.

Architects furnished with references of the highest order.

A Book containing Illustrations and Particulars of JENNINGS'S DRAIN-PIPES, WATER-CLOSETS, URINALS, LAVATORIES, SLUICE-VALVES, FIRE-COCKS, GULLY-TRAPS, SHOP-SHUTTER SHOES, &c. &c. can be had free on application, or by post, if two postage stamps are inclosed to

GEORGE JENNINGS, SANITARY ENGINEER,
29, Great Charlotte-street, Blackfriars-road.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS,

TRAPS, &c. at the

NEAR POOLE, DORSET.

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

THE AGENTS:—
Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;
Where a large stock is always kept on hand.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use, and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and renders stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No 6, Upper Thames-street.—C. Richardson's, South Wharf, Paddington.—G. Erith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

MILL-WALL POTTERY (near Scott Russell's).

Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application.

HENRY TURNER, 2, SOUTH WHARF, PADDINGTON,

5s. Traps, 2s. 6d. 5s.

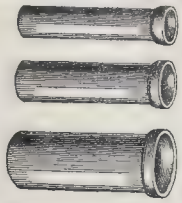
Manufacturer of Closet Basins and Traps, yellow outsides, with white insides. These are warranted to be the most durable earthenware now manufactured.—A list of shapes and prices sent free, on application. A large stock of Plug Basins of every variety.

JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN-PIPES (WITH WHOLE OR HALF SOCKETS), WATER-CLOSET PANS, SINK-TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE PURPOSES.

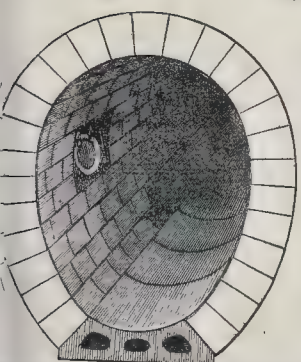
LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

HALF-SOCKET PIPES.

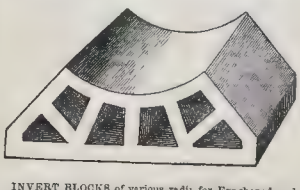


BY THE USE OF WHICH DRAINS MAY BE READILY EXAMINED, AND JUNCTIONS INSERTED, IN THE EVENT OF REQUIRING FURTHER CONNECTIONS.

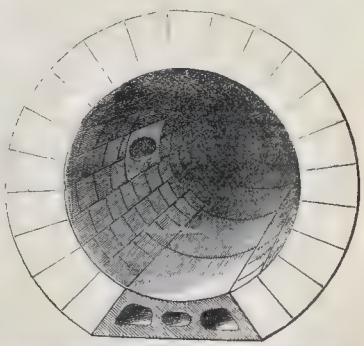
STRAIGHT TUBES IN TWO FEET LENGTHS.



IMPROVED WATER-CLOSET PANS AND TRAPS, WHITE INSIDE, 7s. 6d. EACH.



IMPROVED YARD SINK.



The great advantages attending the use of these articles are now so generally understood as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glass, far surpassing any other manufactured of Brown Stone Ware.

EG-SHAPED SEWER, WITH INVERT BLOCKS AND FLAP-TRAP.

INVERT BLOCKS of various radii, for Egg-shaped and Circular Sewers, extensively used by the Metropolitan and City Commission of Sewers, and are found to be well adapted to the purposes for which they are intended.

CIRCULAR SEWER WITH INVERT BLOCKS AND SPLAYED PIPE FOR HOUSE DRAINAGE.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Deck-head, Bermondsey; Panyer's Wharf, foot of Battersea-bridge, Battersea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 33, Bryden-street, Covent Garden; and at EDWARD SAUNDERS, 94, Wardour-street, Oxford-street. Drawings and List of Prices will be forwarded free, on application.

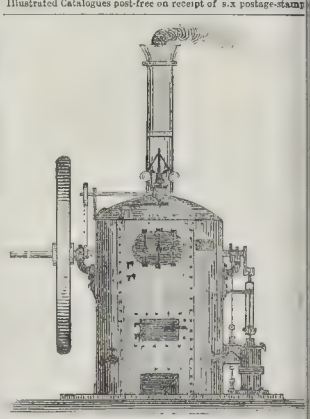
TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete patterns, sketches, and price lists sent to any trade. 75, High Holborn

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, bank, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double acting spring hinges, and superior gate fastenings, at most-take prices. None get the unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c



STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Coke, rail, and Hot-house Boilers, either in wood or iron, respectfully call the attention of the nobility, gentry, and farmers to their simple but efficacious method of warming hot-houses, and all other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out for performing these three separate kinds of work by one machine and as it is self-feeding, it does not require any skill or care using like the older inventions introduced. It can either worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,

53, 54, & 55, WYCH-STREET, STRAND.
Illustrated Catalogues post-free on receipt of six postage-stamp

A SAVING of TIME and MATERIAL with Solidity of Building.
HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 48, Albert-street, Manchester

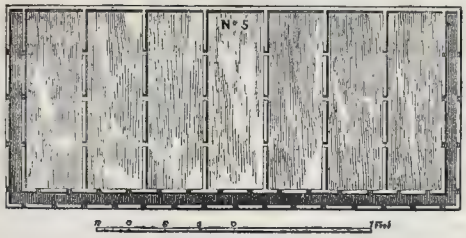
TESTIMONIAL.

"Thorn Island Battery Works, Milford Haven.
"Mr. Gough, "Jan. 19, 1853.
"Sir,—The three-horse power steam-engine purchased from you in 1852 for the purpose of hoisting stone and other material in the building of the above battery, has answered the purpose for which it was erected very well, and from its portable nature was found very convenient to remove from one part of the building to another. The consumption of coals was about 4 cwt in 10 hours.
"I am, Sir, yours truly, for THOMAS JACKSON,
"THOMAS SWAIN."

N.B. Wanted, an Apprentice to the Engineering Business, to reside on the premises. A premium will be required.—Apply as above.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE, WOLVERHAMPTON, Manufacturer of Iron and Mortise Locks and Builders' Ironmongery.

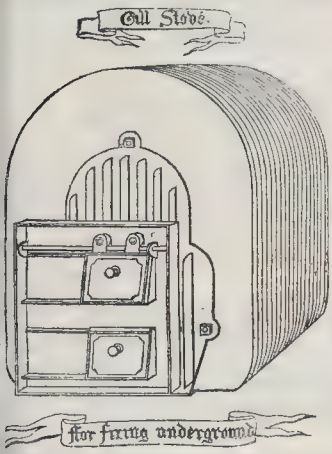


AA. A set screw and pin moving in slab C, to regulate for the thickness of joist, from 2 to 4 inches.
B. An eccentric notched lever, to be turned and pressed against the joist.
Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm; the greater the strain, the more reliably, by its eccentric action, will the lever hold. The Patentee, in calling the attention of Builders and others, assures them that his cramp possesses great advantages. It is a new cramp of the best kind, and well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and, at the same time it is light and portable

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, Brass, and Iron; Tin, Composition, Iron and Brass Tubing, Gun-piece-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London

HAYWARD'S IMPROVED

COAL-HOLE PLATES. ILLUMINATING GRATINGS. PAVEMENT LIGHTS.



COAL-HOLE PLATES, with Wrought Eyes fitted; ILLUMINATING with Glass Lenses, 6s. each; Ditto, plain Iron, solid, 2s. 9d. each; Ventilating, 3s. each

N.B. The Flange A prevents them from shifting when trodden on or being forced up

ILLUMINATING AREA GRATINGS, thick Glass fitted, 5 or 10-inch openings of any length or number, at per foot super. 12s.

ILLUMINATING PAVEMENT LIGHTS, with Flange, as A, and Glass Lenses, 30s. each, 21 inches diameter.

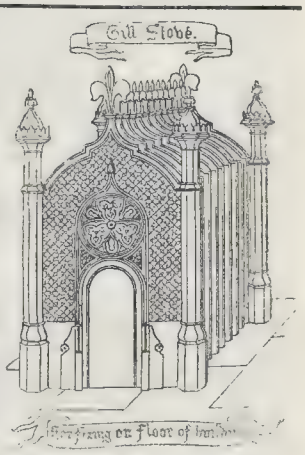
HAYWARD (BROTHERS), MANUFACTURING IRONMONGERS, 196, BLACKFRIARS-ROAD.

STUART AND SMITH'S
PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

THE PATENT GALVANIZED IRON.

TUPPER AND CARR'S PATENT GALVANIZED IRON IS THE ONLY ARTICLE THAT HAS STOOD THE TEST OF TIME.

Several Roofs in Woolwich and Deptford Dockyards, erected in 1843, are as perfect as on the day they were put up.

TUPPER and CARR'S process of Galvanizing is used very extensively in the Dockyards and by the Board of Ordnance; it can be applied to EVERY ARTICLE MADE OF IRON, and, when properly done is a SECURE and LASTING PREVENTIVE of RUST.

The PATENT GALVANIZED IRON is to be had ONLY of TUPPER and CARR, the Manufacturers and Patentees, at their Warehouses and Works:—

3, Mansion House-place, and Limehouse ..... LONDON.
Nos. 6 and 10, Berkley-street ..... BIRMINGHAM.

Where also are kept in Stock COMMON, BEST, and CHARCOAL Black SHEETS, GAS-TUBING, and TIN-PLATES.

IRON ROOFING FIXED IN TOWN OR COUNTRY.

Iron-plate working in all its branches; also Smith's Work and Castings.

Full particulars, Lists of Prices, Drawings, Estimates, &c. can be obtained at TUPPER and CARR'S LONDON OFFICE.

3, MANSION HOUSE-PLACE, CITY,

Where it is requested all Letters may be addressed.

N.B.—AN ALLOWANCE TO THE TRADE

SKAIFE'S GALVANIZING WORKS,

Commercial road, Limehouse, London

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form
Sheets plain and corrugated. Roof fixed complete

J. Skaife is also agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zink, and Tiles.

An Allowance to the Trade.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.

Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.

IRON ROOFS.

Patent Corrugated, Galvanized, and Painted, Wrought iron, principal, Slate and Slated Roofs, to any span.

Wrought and Cast-Iron Bridges, Girders, Fire proof Floorings Shutters, Doors, &c.

Engineers' and Builders' Castings of all kinds manufactured by JOHN WALKER.

Builder, Contractor and Ironfounder, Millwall, Poplar.

Offices, Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be examined on application.

N.B. Galvanized and painted Sheet Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade

---

PATENT GALVANIZED IRON.

(IMPROVED PROCESS.)

JOHN SYMONDS and CO.

WORKS.—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.

GALVANIZED SHEET IRON and WIRE of every description, superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c. Roofs fixed complete.

JACKSON and COOK, Ironfounders and

Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others requiring roofing to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire proof. Drawings and estimates furnished

Island Foundry and Ironworks, Millwall, London.

Offices, 12, Fenchurch-street, City.

SAMUEL HEMMING'S PATENT much

approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches chapels, shooting lodges, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses.

Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEILE and STEDALL'S,

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO., (opening to the Monument), London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

HEATING by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D and E BAILEY, 272, Holborn.

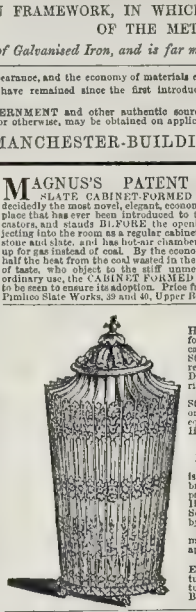
FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for,—the prize of public approbation,—has long been obtained by BROWN and GREEN'S Celebrated KITCHEN RANGES, which is preeminently the best, most perfect, economical, and complete apparatus for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, R. W. LENNARD and CO. 67, Upper Thames-street, London. Manufactory, Luton, Beds.

HOT AIR, GAS, VESTA, JOYCE'S STOVES.—STOVES for the economical and safe heating of halls, shops, warehouses, passages, basements, and the like, being at this season demanded, WILLIAM S. BURTON invites attention to his unrivalled assortment, adapted (one or the other) to every conceivable requirement, at prices from 10s. each to 30 guineas. His variety of register and other stoves is the largest in existence.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from all the various manufacturers all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Establishment the largest and most remarkable in the kingdom, viz. from 18s. 6d. (two light) to 16l.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS devoted to the show of GENERAL FURNISHING IRONMONGERY (including cutlery, nickel silver, plated, and japanned wares, iron and brass bedsteads), so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent (per post) free. The money returned for every article not approved of



39, CLIFFORD-STREET (corner of Newman-street); 1, 2, and 3, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by P. EDWARDS, SON, and CO. 43, Pond-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

WARMING LARGE BUILDINGS.—CUTLER and SON respectfully state that they are prepared to contract for the Erection of their IMPROVED VENTILATING AIR STOVES, for effectually and economically warming chapels, &c. which they undertake in every instance to guarantee as well as their durability. A Stove may be seen in constant use at their Warehouse, 16, Great Queen-street, Longacre.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

MAGNUS'S PATENT ENAMELLED SLATE CABINET-FORMED FIRE-PLACE.—This is decidedly the most novel, elegant, economic, and comfortable fire-place that has ever been introduced to the public. It moves on castors, and stands BEFORE the opening of the chimney, projecting into the room as a regular cabinet. It is composed of fire-stone and slate, and has hot-air chambers. It may also be fitted up for gas instead of coal. By the economical, who dislike to see half the heat from the coal wasted in the chimney, and by persons of taste, who object to the stiff unmeaning chimney-piece in ordinary use, the CABINET FORMED FIRE-PLACE has only to be seen to ensure its adoption. Price from ten guineas upwards. Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Warehouses, Stores, Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stores may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to

SYLVESTER and CO. Engineers, and Manufacturers of Heating Apparatus, 96, Great Russell-street, Bloomsbury.

LARGE GALVANIZED IRON STOVE for SALE, ready for immediate shipment, and finished in a superior manner; well worth the attention of Australian Merchants, or any one requiring a temporary establishment in the Crimea.—For further particulars apply to Messrs. WM. BIRD & CO. 5, Martin's-lane, Cannon-street, London.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"Gentlemen,—We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you 13 years ago, for our late office, in Cross-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Hornsey-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply lightning conductors, with five pounds and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
134, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No. 7, Sise-lane, London.

TUCKER and REEVE'S LOCKS afford absolute security at a moderate price.

"The novel and evidently effective principle of security on which these locks are constructed, places them at once in the foremost rank of such inventions; in the present state of the art, picking them would seem to be impracticable."—*Standard.*

Depôt, 131, FLEET-STREET, where also may be had, PRICE'S FIREPROOF SAFES, &c.

COPYING PRESSES, CASH and DEED BOXES.

Lists and Prospectuses free.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.—Messrs. HOBBS, ASHLEY, and CO. are now Manufacturing their celebrated AMERICAN and ENGLISH PATENT LOCKS, by their Patent Steam Machinery on the Premises, 97, CHEAPSIDE, and 3a, LAWRENCE-LANE.

Messrs. H. and Co. by the introduction of their Steam Machinery, are enabled to guarantee GREATER SECURITY, and SUPERIOR WORKMANSHIP, at prices more moderate than any Locks produced, either in Town or Country; in addition to which, they are applicable to all purposes for which Locks are used.

Every Lock being made and finished at the Manufactory bears their own stamp, and is warranted, without which none are genuine. These Locks can be procured by order through any respectable Ironmonger in the United Kingdom.

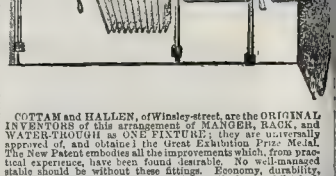
WHOLESALE and RETAIL WAREHOUSE, 97, CHEAPSIDE Manufactory, 33, Lawrence-lane, London.

P.S. Depôt for Milner's Patent FIRE and BURGLAR PROOF SAFES fitted with Hobbs's Patent Locks.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnishers of all kinds, with Patent Shifting Spindles, Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 3s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.



PARNELL and PUCKRIDGE'S DEFIANCE and NATIONAL LOCKS, "which cannot be picked," are made of all sizes, and for every purpose.

FIRE-PROOF SAFES, DOORS, and FRAMES; DEED and CASH BOXES, COPYING and LEVER PRESSES; STREET-DOOR LATCHES, warranted safe from picklocks.

Descriptions and lists of prices may be had, or sent, upon application to

PARNELL and PUCKRIDGE, 23, STRAND, London.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fitments. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.

Castings Warehouse, 31, Upper Thames-street.

DAVISON'S IMPROVED STABLE PAVING BRICKS.—The attention of Architects, Builders, and Others, is particularly directed to this most durable and efficient pavement, so especially adapted to stables, cattle and carriage sheds, &c.

These bricks may be seen laid down at the New Metropolitan Market, and at Mr. Rea's Great Central Horse and Carriage Repository, near the Elephant and Castle. Samples and estimates for laying down these bricks in London will be furnished by Messrs. WILLIAM LARKE and SON, 17, Little Moorfields; and prices and all particulars will be forwarded on application to the Manufacturers, CHARLES DAVISON and CO. Queen's Ferry, near Flint.

And in a variety of large cases.

IMPROVED PATENT ROUGH PLATE, PLAIN, FLUTED, AND IN QUARRY PATTERNS.

BRITISH PLATE, PATENT PLATE, SHEET, CROWN, AND COLOURED WINDOW GLASS. PURE WHITE SHADES FOR ORNAMENTS.

Pumps, Water-closets, and Plumbers' Brass Work. Genuine White Lead, Paint, Colours, Varnishes, Brushes, &c.

Tariffs of the above on application to

T. MILLINGTON, 87, Bishopsgate-street Without, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854 was manufactured HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes ove named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price 4 exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the eference given to the Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

CHARLES WM. WATERLOW AND CO.

SPECIAL NOTICE.
TO SECURE THE ADVANTAGE OF THIS YEAR'S ENTRY, PROPOSALS MUST BE LODGED AT THE HEAD-OFFICE, OR AT ANY OF THE SOCIETY'S AGENCIES, ON OR BEFORE 1st MARCH.
INSTITUTED 1831.
SCOTTISH EQUITABLE MUTUAL LIFE ASSURANCE SOCIETY
Incorporated by Royal Charter, and Special Act of Parliament.
Head Office—EDINBURGH, 28 St. Andrew-square.
LONDON—126 Bishopsgate-street Within.
The SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY is an Institution peculiarly adapted to afford provision for Families. It was established in the year 1831 upon the principle of MUTUAL CONTRIBUTION, the surplus or Profit being wholly divisible among the Members, and the Additions which have been made to Policies at the Periodical Investigations of the Society's affairs, in consequence of the success of the Institution, and the great advantages derived by the Members. The following Examples exhibit the Additions already made:—
A Policy for 1,000l. opened in 1838, is now increased to 1,233l. 8s.
A Policy for 1,000l. opened in 1836, is now increased to 1,321l. 16s. 10d.
A Policy for 1,000l. opened in 1840, is now increased to 1,310l. 13s. 7d.
The Profits are ascertained and divided triennially among the Policies of more than five years' duration.
The Annual Revenue is upwards of 140,000l.
The Amount of Assurances in force is upwards of Four Millions and a Quarter Sterling
The Vested parts of the Representatives of Deceased Members exceed one-fifth of the entire
The Total Amount of Vested Additions allocated to Policies exceeds 600,000l.
The Accumulated Fund is upwards of 1,800,000l.
Loans are granted to Members to the extent of the Office value of the Policies.
Copies of the Annual Report, Forms of Proposal, and all information may be had on application at any of the Society's Offices in town or country.
ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.
W. COOK, Agent.
January, 1853. 126, Bishopsgate-street, London.

The Builder.

TURDAY, FEBRUARY 3, 1855.

THE connection between disease and defective structural and economic arrangements, often as we have considered it, continues to demand the most serious tion. The relationship of cholera and fever sspools, imperfect drainage, impure water, harged graveyards, and want of venti-n, is a great sanitary question, with h we feel ourselves all the more urgently d upon to deal, to the best of our y and experience, that it is one of which nedical faculty themselves, or their recog- exponents, such as the *Lancet*, admit almost total ignorance, notwithstand- he hosts of facts, whence an inductive correct scientific or theoretical knowledge ne subject ought to be derivable. Thus, editor of the *Lancet* himself, in a recent le, frankly says,—"We think it right to m the public that however satisfied some le may be upon the matter, the true ology of cholera has not yet been dis-red;" so that "all our methods of treat-, howsoever loudly some of them may be ted as rational, are in truth empirical [or kish], experimental and tentative . . ," he adds, "shall give light out of the e darkness? Alas! the efforts of those who most competent to the task, are almost owered by the ever-thickening cloud! Each enthusiast shouting 'Eureka!' thinks it was ved for him to disperse the gloom. Yet as but contributed a fresh volume of e." Some of his professional correspon- are even still more hopelessly despondent. , Mr. Borham says, — "At the mention of rord cholera in the true sense, decimating opulation and army, as it has been doing, the ical surgeon is struck with feelings of awe; f he possess a mind, it becomes enveloped onfusion of ideas which seem to get more unded as he proceeds to think!" This is rful state of matters amongst our medical ers, and shows the necessity for renewed and nued inquiries. There is little "smoke" ut some illuminative matter in it. Even gas with which it was of old intended to up London was regarded but as "smoke," he little match was put to it, which set it blaze of light. It is the duty of every one, e have heretofore said, in the present exity and utter paralysis of medical skill, subject of such universal and most vital est as this is, to contribute any little light may be in him towards the general illu-tion of so dark a question.

te thing appears beyond all doubt,—and it this we work resolutely, however feebly,— where human beings are crowded together arranged dwellings; where the drainage is nd the cesspool lurks; where refuse rots, air is vitiated, or the water impure and y,—there cholera, when evoked, reigns and : those still speak correctly who make King era sing,—

What is my court? These cellars piled
With filth of many a year—
These rooms with rotting damps defiled—
These alleys where the sun ne'er smiled,
Darkling and drear!

These streets along the river's bank,
Below the rise of tide;
These hovels, set in stifling rank,
Lapped by the earth-damps green and dank—
These cesspools wide.

These yards, whose heaps of dust and bone
Breathe poison all around;
These styes, whose swinish tenants grown
Half human, with their masters own
A common ground.

What are my perfumes? Stink and stench
From slaughter-house and sewer;
The oozing gas from opened trench,
The effluvia of the pools that drench
Courtyards impure."

Two points have been dwelt upon very strongly by the Registrar-General in his reports, as increasing the risk of cholera, namely, lowness of level and impure water. Thus, after pointing out in his report for December last, that the district in which the poorer classes abound suffered generally most from the epidemic, he said, "from an attentive consideration of all the facts, the rich, living on low ground, in houses supplied with impure water, are in great danger during a cholera epidemic; while the industrious hardworking population, living on simple food, in clean houses not much crowded, supplied with pure water, on high ground, or on well-drained ground that has not been a marsh, have little to fear from cholera in England."

Contrasting some of the districts, the Registrar said, "Rotherhithe and Chelsea differ little in rental; but the Chelsea district, supplied by the Chelsea Water Company, is on an elevation of 12 feet, and lost forty-seven inhabitants in 10,000 by cholera; while Rotherhithe, on lower ground (0 feet), supplied with impure water, lost 176 by cholera in 10,000 inhabitants. In Hackney, again, the people are apparently not in better circumstances than the people of Camberwell, yet in the two epidemics cholera was fivefold more fatal in Camberwell than it was in Hackney; Camberwell lying low, and receiving the impure water; Hackney lying high, and receiving, in 1854, a water of better quality."

Now, touching impure water, our present more immediate purpose is to direct attention to a book recently published by Dr. Snow, on the part which is played by the water supply in the spread of cholera and other diseases.*

Dr. Snow considers that the morbid material producing cholera must be introduced into the alimentary canal—must, in fact, be *swallowed*, and that it has the property of reproducing its own kind. Particulars of the *way* in which it is swallowed would scarcely suit our pages: suffice it to say, that the want of personal cleanliness, scarcity of water, deficiency of light, and over-crowding, are shown to concur in bringing this about; and his theory is made to explain why in thousands of instances a case of cholera in one member of the family was followed in hundreds of instances by other cases, whilst medical men and others who merely visited the patients, escaped. The chief means of extension, however, he considers to be the contamination of the water, used for drinking and culinary purposes, by matters, containing the morbid material, either permeating the ground, and getting into wells, or by running along channels and sewers into the rivers, from which entire towns are sometimes supplied with water. The cases where outbreaks of cholera have been traced to the contamination of water by adjoining cesspools, are not few. The peculiarity of Dr. Snow's theory is, that it is not produced by simple contamination, but that the actual matter of the cholera through the dejections of the patient is thus transmitted.

When the terrible outbreak of cholera in Broad-street, Golden-square, and adjacent streets, of which we have had occasion to speak several times, took place, Dr. Snow suspected some contamination of the much-used pump in Broad-street, near the end of Cambridge-street; and he has brought together a number of circumstances which seem to show some connection. Of the eighty-nine deaths from cholera registered during the week ending Sept. 2nd, in the sub-districts of Golden-square, Berwick-street, and St. Ann's, Soho, he found that nearly all had taken place within a short distance of the pump. There were only ten deaths in houses decidedly nearer to another street pump, and in five of these cases the families informed him that they always sent to the pump in Broad-street. "There are certain circumstances bearing on the subject of this outbreak of cholera which require to be mentioned. The workhouse in Poland-street is more than three-fourths surrounded by houses in which deaths from cholera occurred; yet out of 535 inmates only five died of cholera, the other deaths which took place being those of persons admitted after they were attacked. The workhouse has a pump-well on the premises, in addition to the supply from the Grand Junction Waterworks, and the inmates never sent to Broad-street for water. If the mortality in the workhouse had been equal to that in the streets immediately surrounding it on three sides, upwards of 100 persons would have died."

At a brewery in Broad-street, where there were seventy men, none suffered from cholera: few drank water at all, and the few who did, never obtained water from the pump, having a deep well on the premises.

At a percussion-cap manufactory in the same street, where 200 people were employed, two tubs supplied with water from the Broad-street pump, were kept on the premises for those to drink who wished, and eighteen of these people died of cholera at their own homes.

Dr. Snow gives a map of the locality, showing the deaths by a black line in the situation of the house where it occurred, and gives reasons for believing that the deaths either very much diminished, or ceased altogether at every point where it was decidedly nearer to send to another pump than to the one in Broad-street. Against one of the houses, immediately adjoining the pump, there are eighteen black lines! The total number of deaths ascertained was over 600! The pump-well was opened, but did not show any hole or crevice in the brickwork by which impurities might enter. It is stated that the well is from 28 to 30 feet in depth, going through the gravel to the surface of the clay beneath, and that a sewer passes within a few yards of the well 22 feet below the surface. "Whether the impurities of the water," says our author, "were derived from the sewers, the drains, or the cesspools, of which latter there are a number in the neighbourhood, I cannot tell. I have been informed by an eminent engineer, that whilst a cesspool in a clay soil requires to be emptied every six or eight months, one sunk in the gravel will often go for twenty years without being emptied, owing to the soluble matters passing away into the land-springs by percolation. As there had been deaths from cholera just before the great outbreak not far from this pump-well, and in a situation elevated a few feet above it, the evacuations from the patients might of course be amongst the impurities finding their way into the water; and judging the matter by the light derived from other facts and considerations previously detailed, we must conclude that such was the case. A very important point in respect to this pump-well is, that the water passed with almost everybody as being perfectly pure, and it did in fact contain a less quantity of impurity than the water of some other pumps in the same parish, which had no share in the propagation of cholera. We must conclude from this outbreak that the quantity of morbid matter which is sufficient to produce cholera is inconceivably small, and that the shallow pump-wells in a town cannot be looked on with too

* "On the Mode of Communication of Cholera." By John Snow, M.D. &c. London: Churchill, New Burlington-street. 1855.

much suspicion, whatever their local reputation may be."

Tables are given showing the influence which the drinking of water containing the sewage of a town exerts over the spread of cholera, when that disease is present; and some extraordinary facts are deduced from an examination of a part of London where some of the houses are supplied by the Southwark and Vauxhall Company, and others by the Lambeth Company who take their supply at Thames Ditton. The pipes of each company go down all the streets. "Each company supplies both rich and poor, both large houses and small: there is no difference either in the condition or occupation of the persons receiving the water of the different companies. Now it must be evident that, if the diminution of cholera, in the districts partly supplied with the improved water, depended on this supply, the houses receiving it would be the houses enjoying the whole benefit of the diminution of the malady, whilst the houses supplied with the water from Battersea-fields would suffer the same mortality as they would if the improved supply did not exist at all. As there is no difference whatever, either in the houses or in the people receiving the supply of the two water companies, or in any of the physical conditions with which they are surrounded, it is obvious that no experiment could have been devised which would more thoroughly test the effect of water supply on the progress of cholera than this, which circumstances placed ready-made before the observer."

The inquiry gave striking results. In the first seven weeks of the epidemics, the proportion of deaths to 10,000 houses, was, in those supplied by the Southwark and Vauxhall Company, 315; while in those supplied by the Lambeth Company, it was but thirty-seven. In the second seven weeks, when other means of communication came into operation, the difference was not quite so great; but even then the population supplied by the Southwark and Vauxhall, continued to suffer nearly five times the mortality of that supplied by the Lambeth!

Surely there is here matter for the most serious and rigid examination. Dr. Snow considers that typhoid fever is propagated in the same way as cholera, and gives instance upon instance of the production of the fever by the use of polluted water. He justly urges that the diminution of mortality ought not to stop with cholera, as the deaths registered under the name of typhus consist chiefly of this typhoid fever. "Its victims are composed chiefly of persons of adult age, who are taken away from their families and connections. In 1847 upwards of 20,000 deaths were registered in England from typhus, and in 1848 upwards of 30,000 deaths. It is probable that seven times as many deaths have taken place from typhus as from cholera, since the latter disease first visited England in 1831; and there is great reason to hope that this mortality may in future be prevented by proper precautions, resulting from a correct knowledge of the mode of communication of the malady."

We may certainly prepare for the establishment of our long-meditated "Society for Living to a Hundred."

Without adopting Dr. Snow's especial theory, we would ask for his book the most serious consideration of all who may be able to throw light on the subject whereof it treats. We know something of the labour of such inquiries as he has instituted, and can appreciate and admire his zeal and perseverance.

The Laws of Health.—In the Commons last week Mr. Pellatt gave notice that on 6th February he should move for a committee to inquire into the various sanitary Acts.

NEW PATENTS FOR IMPROVEMENTS IN BRICKMAKING.

M. Magloire A. Jullienne, of Paris, has patented "Improvements in Machinery or Apparatus for making Bricks or Tiles." The object of this invention is stated to be the production of bricks or tiles of any shape by compression, the clay being nearly dry when forced into the moulds. In the complete specification which has been filed, the patentee explains the nature of the process, and gives longitudinal and transverse sections of the machinery by which he purposes to conduct it. According to these, the machine for effecting the operation is composed of a strong frame of wood or iron, forming a species of table, having fitted into it a cast-iron frame which carries the various working parts. This frame consists of two longitudinal pieces fixed to the wooden framing by bolts, and united by cross-pieces, between which the moulds are situated. These latter are composed of a double frame of wood, forming two rectangular openings, of the size and shape required for the bricks or tiles. They are open at top and bottom, and lined inside with copper plates. Two vertical frames beneath the table carry two horizontal axes or shafts, which rest in suitable bearings. At the extremity of one of the shafts is a long lever, for the purpose of partially turning it. This same shaft carries also two levers, which are forged upon it: to these levers are attached two chains, the lower ends of which are fixed by bolts to a vertical slide, which forms two rectangular pistons of wood faced with copper, corresponding exactly to the openings of the two rectangular moulds. Each time that this shaft is turned, the short levers draw up the chains, elevate the pressing pistons, and cause them to enter the moulds. An adjustable stop is fitted to the pistons, to limit their descent. Above the machine is fitted a bent lever, which has at one end two flat pieces of wood, which cover the tops of the moulds. These flat covers are held over the moulds by a catch at the opposite end of the lever which carries them, and this catch, which works on a fixed centre, can be engaged or disengaged with the lever by a proper handle. When the catch is removed, the lever turns over on its centre, and removes the covers from the moulds, at the same time that the pistons enter below the moulds, which are then filled with clay. The covers are now brought down again, and the pistons elevated by means of their lever. The bricks are thus to be completed, by the compression which the clay receives between the covers of the boxes and the ascending pistons. In order to eject them from the moulds, the covers are raised, and the pistons elevated still further, to push out the bricks. This movement is effected either by the compressing-lever or another hand-lever on a smaller shaft, which in turn carries at its centre a short lever, attached either by a chain or link to the lower part of the slide which bears the pistons. For moulding bricks of a variety of shapes and sizes, the moulds, covers, and pistons are changed. In some features the machinery described and represented in the drawings appears not unlike the very ingenious printing-press invented by Mr. Ruthven. The patentee, without restricting himself to the exact arrangement as above, claims five things as novel and original, viz.—1. The general arrangement of the machinery. 2. The peculiar construction and arrangement of the moulds. 3. The application of the bent lever, in combination with the lids or covers of the moulds. 4. The peculiar construction and arrangement of compressing pistons, and the mode of working them. 5. The mode of removing the bricks or tiles from the moulds by a further movement of the pistons beyond that point required for compression.

Mr. William Hutton, builder, St. John's Wood, has received letters patent for an "improved machine for the manufacture of bricks." The complete specification declares this invention to consist of an adaptation to an ordinary pug-mill of a series of skeleton moulds, for moulding the clay into bricks, the said moulds being arranged about the lower part of the mill in a vertical direction, being also combined with certain pieces called "pads," employed for forming a vein in one side of each brick. The pug-mill is also furnished with knives for dividing the clay when the moulds are filled thus forming the opposite side of the brick; th pads and knives being operated upon by leve handles. The mode of operation is by placin the clay in the pug-mill, and operating upon i with knives in the usual way by horse or othe power. The effect of this is to force the cla into the several skeleton moulds. These resem ble boxes without bottoms. One side of thi box rests upon a projecting piece of metal, o rail, fixed wider than the bottom of the pug mill,—which piece is connected with a vibrator bell-crank lever, to one end of which is attache the bit of wood called the "pad." During th filling of the moulds, the lever-handles to whic the knives are connected are depressed, so a to hold the pads in forced contact with th moulds. When the clay has been sufficientl constrained, the workman raises the knif thereby dividing the clay and forming the othe side of the brick,—after which, by continuin to raise the lever-handle, the pad is disengage from the mould, and the moulded clay is read to be removed to the stack to be dried pr paratory to burning. In this manner th operator proceeds to discharge the clay fro the several moulds; each time replacing th filled mould by an empty one, and afterwar bringing down the knife to allow the empt mould to be filled. The patentee remarks, that th extent to which the clay is compressed in th mould will depend in a great measure upo the length of time the moulds are allowed remain during the time the pug-mill is in actio The specification gives plans and sections of th various parts of the machine. The claim is f the novel mode of combining certain mechanis so as to constitute a machine capable of man facturing bricks more perfectly than heretofor and more particularly making the bottom of th pug-mill with sloping channels and boxes, l which the clay is discharged from the pug-m with considerably less power than if it we not so.

Mr. Zechariah Round, plasterer, of Dudle Worcester, has received letters patent for "I provements in bricks to be used in certain par of buildings." These improvements are stat to relate to bricks to be used in the constructio of doorways and other parts of buildings whe an attachment for nails, screws, and other faste ings is required. For instance, the patent observes they may be used in substitution f the blocks of wood usually built in or inserte into doorways and other parts of buildings f attachment thereto by means of nails or screw Various pieces of wood or metal are let into t bricks after they are burned, being fixed by pi and in sundry ways set forth by the patentee his specification and drawings. Some of t forms are intended for the production of a pec liar sort of brick, which, when built into t wall, so as to form parallel courses, serve as co venient attachments to lathwork. The claim for the "introduction or attachment of piec of wood or metal, or both, into or on bricks, the purpose of affording a convenient means attaching to the walls into which the said bric are built such objects or matters as may requi to be attached thereto," as described and illu trated in the drawing accompanying the spec cation. Further, the patentee defines the wo 'brick' to mean "such masses of burnt cl cement, composition, stone, or other materi as are or may be used in the construction the walls of buildings."

Two other patents, which precede the abo by a few months, we quote, in order to show the ideas of any importance which have recen been suggested.

Mr. W. B. Johnson, engineer, Manchest has patented improvements in machinery making bricks from clay and other plastic ma rials. The invention, according to the spec cation, refers to a method of pressing clay, ar ficial fuel, or other plastic material, into bric This is effected by adapting two or more pist to each of a travelling set of moulds, in c junction with suitable apparatus for causing t pistons to advance gradually towards each oth so as to press the material on more than e side by a continuous action as the moulds tra onward. There are drawings given of the c struction of machinery adopted, parts of wh may be thus described. The side framing of t

machine is provided with flanges at top, to which is attached a table, carrying, by means of arched brackets, a central projecting part for a portion of its length. There are two sets of mould-boxes, each having an orifice at the bottom rather larger than the dimensions of the articles to be made. Within these orifices is situated the raised part of the table, which, therefore, constitutes a portion of the bottom of the moulds. They are each provided with the two pistons already mentioned. Upon the under sides are also toothed racks, in connection with other mechanism, by which the whole series may be caused to travel in one direction when power is applied,—this travelling motion being reversible according to the pulley which is thrown into gear. The mould-boxes are cast together in two sets, there being a division between them, and are capable, by means of wheel-work described in the drawings, of being brought alternately under a hopper, into which the clay or other material is placed. This hopper is provided with a shaft, upon which are placed spiral vanes, after the manner of an ordinary pug-mill, and to which rotary motion is communicated. Within the hopper are also mounted two rollers, adapted to the purpose of facilitating a supply of material to the mould-boxes. Beyond these rollers extend plates affixed to the hopper: these occupy a position over the moulds, and constitute their stops during the pressing of the material. At either end of the machine are standards, upon which are mounted levers, carrying, at their outward ends, by a series of joints, the "pistons." These are so placed as to occupy positions over the mould-boxes when they are run out to the extent of their traverse. When put in motion the machine acts thus: the moulds are caused to travel, and passing under the hopper are supplied with material by the revolution of the blades,—receiving a more perfect filling by travelling under the rollers. The pistons are then made to advance gradually towards each other, so as to compress the material from either side against the stationary plate and table. A further revolution causes various parts to operate so as to draw the pistons from each other, and thus liberate the moulded article from pressure. The travelling motion is continued until the moulds have been brought under a series of plungers, which are made to descend so as to force the moulded articles downwards, and fall on a travelling apron. During these operations the moulds at the other end of the machine are being made to travel under the hopper to receive their supply; and by appropriate mechanism for throwing in and out of gear, each set is alternately compressed and caused to travel back to be fed. As to the degree of compression to which the material may be subjected, the patentee remarks that it may be modified by forming small holes in the pistons, through which it may thus be allowed more or less to escape; and that it may not in escaping fill the space behind the pistons, other holes may be formed in the mould-boxes, through which it may be expelled. The patentee indicates that there may be much latitude or variation of detail in carrying out his invention, but he describes its spirit in the following claim:—"The adaptation of two or more moveable surfaces to a travelling set or sets of moulds, such surfaces being caused to advance towards each other from two or more sides of the moulds as they travel onward."

Mr. John Bird, manager of Chance's fire-clay and brick works, near Dudley, has secured a patent for improvement in kilns for burning bricks and other articles. This invention consists in constructing a kiln in the following manner:—A culvert or air-passage is built below the bottom, leading from the external air to the middle of the foundation of the kiln, where a central mass of masonry is built, with a space around open to the air-culvert or passage; and the surrounding foundation is built up to receive and support the bottom or floor of the kiln. But in place of such floor or bottom being built solid on the foundation, numerous radial passages are made on which the floor is laid. Such passages have their inner ends open into the central space, with which the air-culvert communicates, their outer ends opening into a hollow lining of the kiln. Consequently, says the patentee, when the kiln is in use there is a constant supply of air from the outer atmosphere into the central space, and through the passages below the bottom or floor into the hollow lining of the kiln, the air being in its passage highly heated and tending at the same time to keep the floor and the bricks or articles immediately above it from becoming too highly heated. The fire-places are made with inclined fire-bars, the lower one being horizontal, or nearly so. The fuel is supplied by hoppers above, thus keeping up a continual supply, whilst there is an opening kept above each of the fires to stoke them through. The ash-pit is better closed, and the fire is supplied with heated air from the hollow lining in the kiln, by openings above the fire-bars on either side of each fire-place.

JUBILEE BUILDING OF THE SUNDAY SCHOOL UNION.
TO BE ERECTED IN THE OLD-BAILEY, LONDON.

THE JUBILEE BUILDING OF THE SUNDAY-SCHOOL UNION.

THE Sunday-school Union are about to erect a building for their purposes on a plot of ground in the Old Bailey, London. A competition was instituted, and the annexed design, by Mr. Charles G. Searle (which we publish, mainly to show the operations of the Sunday-school Union), was selected. The building has a frontage of 38 feet in the Old Bailey, and a depth of 110 feet, with the advantage of a side entrance in Prujean-square. It is intended that the ground floor shall be occupied with a capacious shop, equal to the extended business of the Union, with large store-room adjoining. The secretaries' room will be placed near the centre, and adjoining the corridor entrance on the right. The committee-room, which will be in the rear, will be large enough to hold 100 persons, with entrances from the staircase, and from Prujean-square. The basement will be occupied as warehouse room, strong rooms, kitchen, porter's bedroom, warming apparatus, coals, &c.

The frontage on the first floor will be devoted to the library of the society, with librarian's office attached: there will also be separate reading-rooms on this floor.

The upper story will contain a lecture-hall, large enough to hold 400 persons, and high enough to erect a gallery at any future time to accommodate 100 more, with ante-room for the lecturers and speakers: there will also be two large class-rooms for the use of teachers, and the whole of this floor will be so arranged, as to be suitable for a *soirée*, when required.

In the centre of the building will be a large open area for windows communicating with each story, so as to secure light and ventilation.

It is proposed that the front shall be built of stone, if the funds subscribed are sufficient to enable the committee fully to carry out their wishes.

DOINGS IN THE OFFICE OF METROPOLITAN BUILDINGS.

THE registrar of Metropolitan Buildings presents his compliments to the editor of the *Builder*, and requests him to insert in his next number this note, in reference to the articles which appeared in the *Builder* of the 20th and 27th inst. relative to this office:—

The registrar acts under the authority and in obedience to the requirements of the statute by which his office is created; and also in accordance with the decisions and directions of the authority (that of the Commissioners of Works and Buildings) designated by the statute to regulate his proceedings, and confirm (or the reverse) his acts.

No opinion of counsel, however eminent, except an opinion of the law officers of the Crown, obtained by, or under the sanction of, his superior authority, would be a justification to him for acting contrary to his view of duty; and nothing short of the solemn decision of a competent court of justice, or statutory declaration of the Legislature, would be a complete justification for his so doing.

The opinions that have been obtained have been obtained without his concurrence or that of the commissioners, and upon cases stated without being previously submitted either to him or the commissioners.

The opinions of lawyers, however eminent, are only to be regarded as of value and authority according to the sort of case submitted.

As to one of the cases, the registrar knows that the case was not fully stated, and that considerations which ought to have been presented were not brought to view.

The registrar, in his peculiar position, cannot with propriety controvert these matters in the press; and has adverted to them now only because the articles which have appeared in the *Builder* are not only calculated to embarrass the conduct of the business of his office, but to raise, unintentionally no doubt, the impression that he is pursuing an unwarrantable course.

He looks to the express declaration in the statute of the purposes of his office,—to the nature of the institution of which it is a part,—to the various private and public interests which it is the express object of his responsible and highly-paid office to protect; and he feels that it is his duty to act without flinching in furtherance of these purposes, and in the direction of these objects, till a competent tribunal, or a competent authority, pronounces that he is in the wrong.

Many serious constitutional questions are involved in the matter, which are only to be disposed of by a dispassionate consideration of it *in relation to all the interests concerned*. It is a question to be determined, not by a single sentence of a very complicated Act of Parliament, or by a single and subordinate rule of interpretation, but by a view of the whole Act, in relation to the general principles of the law, and in relation to the express intention of the Legislature, and to the nature of the institution, specifically and appropriately framed in exact accordance with that intention.

Office of Metropolitan Buildings, Jan. 31, 1855.

PROVINCIAL NEWS.

Spalding.—The new plans for the Corn-Exchange have been received from Mr. Bellamy, the architect. They include a news-room, public-office, corridor and staircase, board and waiting-rooms, and exchange behind: the estimated cost is from 2,000*l.* to 2,500*l.*

Woolwich.—It having been proposed that the vestry should sanction the Burial Board's borrowing 5,000*l.* for the purchase of thirteen acres of land in Wickham-lane, at 150*l.* per acre, for a new burial-ground, the parish was polled, and a majority of 346 got in favour of the resolution.

Kidderminster.—The opening of that portion of the new public rooms in this town which is intended for a corn-exchange, took place on Thursday week, and was celebrated by a dinner attended by a large number of persons. The first stone of the edifice, which comprises the public-rooms and corn-exchange, was laid on the 7th November, 1853. The entire building will not be finished for another month or two, and it will be some time further before the organ is fixed in the large hall—an apartment destined for music, balls, lectures, and other social gatherings. The main building is so far advanced that the masons have been able to remove the scaffolding. The design of the architects has been carried out in brick and stone. The style is Italian. The front contains the smaller rooms, which are to be used as a library, &c.; and has a lower story in rusticated stone-work, and an upper in red brick, also stone Corinthian pilasters, cornice, &c. The front on the left recedes some yards to a square tower with campanile, and behind this stands the corn-exchange. The main entrance is in the centre of the projecting part, and goes to the music-hall behind: a second leads to the corn-exchange; and through the tower another leads to a hall and the gallery of the music-room, &c.: all three entrances are approached by fine flights of iron steps. The corn-exchange is placed with its end towards the tower. Its dimensions are 59 feet in length, 36 feet in breadth, and about 17 feet to the springing of the roof. The roof is open. The light is obtained from seven semi-circular-headed windows in the side-wall, and from a lantern-light 9 feet wide, which forms the ridge of the roof, and extends from one end to the other. The sides of the lantern are of perforated glass for ventilation, and the top is of rough plate to exclude the rays of the sun. Six wrought-iron girders cross the room and support the roof. The girders are filled up with cast-iron foliated ornaments. The roof boarding is stained and varnished, and the girders and their filling-up painted of a bright blue. An arcade constructed of pilasters and mouldings with semicircular arches is carried round the room. Folding-doors open between the corn-exchange and the music-hall. The corn-exchange and music-hall will be warmed by means of hot-water pipes on Perkins's system. The design of the building was furnished by Messrs. Bidlake and Lovett, Wolverhampton, architects. The builder was Mr. Thompson.

Bristol.—The County Court Judge who sits in the Guildhall of this city seems to have had a sad time of it between draughts and suffocation, from a want of proper arrangements for ventilation in the hall.

Tewkesbury.—The local Board of Health and the local gas company have a misunderstanding as to the supply of the streets with gas. The company contracted for 6s. 3d. a thousand cubic feet, but it was forgotten to specify a time for the continuance of the contract, and the board refused to contract, under the circumstances, for more than one year. The company have announced their price in future to private consumers to be 7s. 6d. A resort to naphtha for the public lamps is talked of. Might not the board try the electric light, one at each cross corner or meeting of streets?

King's Lynn.—About thirty sets of plans for the new workhouse have been sent in, and the committee appointed for the purpose of examining them have reduced the number to three. Which of these will be finally adopted has not yet been determined. Several of those rejected have been set aside simply on account of their costliness, some being estimated at double the sum which the guardians are empowered to expend in the erection of the new building.

Devonport.—A new Baptist Chapel was opened here on Tuesday week. It stands on the east side of the Temperance Hall, at the entrance to Devonport from the suburb of Stoke. The architect was Mr. Alfred Norman, of Devonport. The style is Italian in general character, though exhibiting some peculiarities (more especially in the interior). There is, at the south end, a window of large dimensions, filled with carved stone tracery, Italian in its details, but combined with Gothic. This and the other windows are filled with stained glass. The building, which has only one frontage in Fore-street, is 50 feet wide, and rises to the height of 58 feet. The extreme length, including vestries and library at south end, is 120 feet; and the chapel, which is 38 feet high to the ceiling, is calculated to seat about 900 persons. There are galleries on three sides. The contract for the erection of the chapel was taken by Mr. Jenkins, builder, at the sum of 3,029*l.* which, with amount paid for site, makes the cost about 3,700*l.* of which 1,800*l.* had been raised prior to the opening services.

Penzance.—The London and Penzance Serpentine Company gave the workmen in their employ a treat on Monday before last, to commemorate the opening of their new works, situate on Newlyn-green. The new works, according to the *Cornwall Gazette*, consist of a centre—the ground-floor devoted to a steam-engine and its appliances, and the second story to show-room purposes—with a wing on either side, one occupied by "marble-masons" the other by "turners." The first are engaged in cutting the Serpentine, and occasionally marble and slate, into slabs, afterwards working up this rough material into chimney-pieces: the second attend more particularly to work requiring the lathe.

Rhyl.—At a meeting of the Improvement Commissioners, held on the 12th ult. it was resolved to convey to Mr. Myatt, of Congleton, the entire satisfaction of the commissioners with the manner in which he had carried out the drainage works of the town under some difficulties.

Liverpool.—At a recent Health Committee meeting, Mr. Newlands gave an explanation, the gist of which was that a complete system of sewering for the town was drawn up by him in 1847-8, and approved of by the Council; and that, since, nothing had been done in sewering the borough that was not according to that system. There were tenders before the committee for sewering nearly three miles of streets that had risen up within the last three months. They were taking these streets first, because the work could be so much more cheaply done than when houses and buildings were erected on the streets, and the owners of the property contributed 12s. a yard for each side of the sewer towards the expenses of making it. There was no neglect of old streets: there were only six streets unsewered in the borough.——A correspondent of the local *Times* complains that while passing along the river wall, at the Hus-kisson Dock, he was surprised to observe that no coping stones had been placed on the top, and that the salt-water, which there rolls on to the quay with a high tide and westerly breeze, was making considerable ravages with the small pieces of granite composing the walls, washing out the mortar, and materially weakening the structure. This, he thinks, would not have been the case if pressure had not been applied for "cheap" work. A wide crack, he adds, may also be observed between the dock wall and the foundation of the new battery.——The Earl of Sefton is laying out a considerable sum in improving the approaches to his mansion of Croxteth-hall. The new church, which stands on the north side of the drive, at West Derby village, and for which his lordship gave the land, progresses slowly: it is now being roofed in.

Sheffield.—The Ball-street new foot-bridge has been opened, and a new street is to be formed to run from the north end of the bridge into Neepsend-lane. The cost of the bridge has been 1,024*l.* The cost of the Neepsend bridge has been provided for, like that of the Ball-street, by subscription, each to the extent of about 1,000*l.* Another new street is to run from the end of Borough-bridge into Harvest-lane, and forward into Mowbray-street. This new street will run along the north side of the river, from the Borough-bridge to the new Neepsend-bridge.

Doncaster.—On Monday before last, a meeting of the Cemetery Commissioners was held at the Town-hall, to meet the architect, to open tenders for laying out the ground, &c. The tenders were from Messrs. E. Price, J. Micklethwaite and Son, R. Brooks and M. Hawksworth, John Law, W. Bradley and W. Boddy, with S. Appleby; J. Patterson, Birmingham; and W. Knight. The highest was 554*l.* 12s. 8d. and the lowest 235*l.* The tender of Messrs. Appleby, Bradley, and Boddy, for the levelling, laying out the walks and drives, and the draining and planting of the ground, according to the plans and specifications, at the sum of 267*l.* 2s. 8d. was accepted, the contract to be forthwith prepared and executed. It was resolved that Mr. Appleby's additional tender for planting (100*l.*) be substituted for his former one of 38*l.* 10s. With Messrs. T. and C. Anelay's contract for building the chapels and lodge, this will bring the cost under the original estimate of 1,500*l.* The chapels, &c. are to be completed by the 22nd of October; but the ground will be ready for interment in three months.

Newcastle-upon-Tyne.—The inauguration of the Ragged and Industrial Schools for this town took place on Wednesday week. These schools have been built from a design by Mr. Dobson, architect, and were erected by Messrs. Wilson and Gibson, contractors, at a cost of 2,400*l.* There are two large school-rooms, and two working-rooms for boys and girls, master's residence, and dormitories for a certain number of children. At present they contain sixty boys and seventy girls, out of which forty-five of each sex are fed daily in the institution, but all the remaining boys receive one meal per day.—— All Saints' Church has been restored and re-opened.

Biographies.—The veteran author of the "Memoirs of E. J. Willson," which appeared in a form a number of this work—Mr. Britton—has written similar essays on the lives and writings of his pupil, W. Bartlett (whose numerous drawings have been so well and skilfully multiplied by several of our best landscape engravers), and of his old associate and friend E. W. Brayley. The first appeared in the *Art Journal*, and the second in our own paper and the *Gentleman's Magazine*. The author reprinted a small number of these memoirs as pamphlets for private distribution, and has inscribed each to his contemporary friends, S. Carter Hall, John B. Nichols, and the editor of this journal, in kindly terms expressive of his feelings.

AQUEDUCTS.

INSTITUTION OF CIVIL ENGINEERS.

At the meeting on the 23rd ult. (Mr. James Simpson, president, in the chair), the discussion was renewed on Mr. Rennie's "Description of the Aqueduct of Roquefavour, and the Canal of Marseilles." It was pointed out that the ancients were not ignorant of the use of pipes for conducting water, as tubes both of lead and of earthenware had been found, in the oldest remains; but as they had not any knowledge of the use of cast-iron, they could only use pipes of small dimensions and subject only to moderate pressure. It might, however, be conceived, that the use of channels and lofty aqueducts, preserving nearly a regular and very gradual fall, had been adopted, because it was found necessary to afford an opportunity for the water depositing the impurities held in mechanical or chemical suspension: accordingly, on the sides and in the bottom of the water channel of the Pont-du-Guard, there was a deposit of nearly a foot in thickness of carbonate of lime, and beneath the soffit of some of the upper arches there were suspended several large stalactites, formed by the percolation of the water through cracks in the masonry. The same reason had probably, in some degree, induced the adoption of so expensive a construction as the aqueduct of Roquefavour, in preference to using metal pipes, lest the deposit should become so considerable as to eventually stop them up. This had actually occurred in the lead pipes, originally 5 inches in diameter, found in connection with the aqueduct of Alcantara, near Lisbon, and through which, although only about a century old, scarcely any aperture remained.

It should be remembered that the great works of the ancients were national undertakings, executed without regard to expense; whereas, public works were now generally the result of the enterprise of associated individuals, and however an engineer of the present day might be inclined to exercise his taste and skill, in designing and executing monumental structures, he was restricted by the modern inventions of "estimate of cost," and "dividend," which were generally received as the standard of his genius and skill.

It was shown, that public works required to be designed in accordance with the country or district in which they were situated; for instance, in Norway, where, although the line of railway traversed a difficult country, the estimated total cost was limited to about 10,000*l.* per mile, including stations, plant, &c. There were several tunnels, and some high viaducts, and it would have been impossible, within the stipulated limit of expense, to have constructed the latter of masonry; therefore, red pine timber, the indigenous and cheap produce of the country, was adopted and used without squaring, and with only just that amount of preparation and of labour which enabled the timbers to be framed together. The cost was about one shilling per square foot of superficial area of elevation, as compared with twenty-five shillings, the stated cost of the Roquefavour aqueduct. The timber was not presumed to last beyond fifteen years, and a fund would be taken by the Company from revenue, to enable a more permanent structure to be erected, or an embankment to be formed.

It was contended, that the cracks observed in the upper arches of the Roquefavour aqueduct resulted rather from insufficient weighting of the haunches than from expansion.

In corroboration of a view previously expressed, it was mentioned, on the authority of the "Architectural Dictionary," published by the Architectural Publication Society, article "Aqueduct," that "To cross the Manhattan Valley, an aqueduct bridge, 105 feet high, and 4,180 feet long, would have been required: this would have preserved 3 feet of head-pressure for the conduit water, but at an expense of about 240,000*l.* while the passage by four pipes of 36 inches each, was calculated to cost one-fifth of that amount: the latter was therefore adopted."

It was contended, that the design of the aqueduct of Roquefavour conveyed the impression of unnecessary timidity on the part of the architect, as it was merely a copy of the ancient structures: the three tiers of arches were not at all necessary for strength, nor did they conduce to the beauty of the building: in fact, it was probable the ancients only adopted that system because it facilitated the construction, by affording a secure footing for the scaffolding. The modern viaducts constructed for supporting railway trains, weighing 300 or 400 tons, travelling at the rate of forty to fifty miles an hour, were all upon tiers, with one tier of arches; and when the building of isolated furnace chimneys, as much as 350 feet in height, was no unfrequent occurrence, there could not be any difficulty in raising a series of such shafts, and connecting them at the top by arches.

The water conducted from the springs near Bellas to Lisbon, passed by the aqueduct of Alcantara, 2,600 feet long, over a valley, at such an elevation that the soffit of the centre arch, of 98 feet 4 inches span, was 229 feet above the ground level. That structure consisted of one tier of pointed arches of a kind of grey marble: it was completed some time before the year 1752.

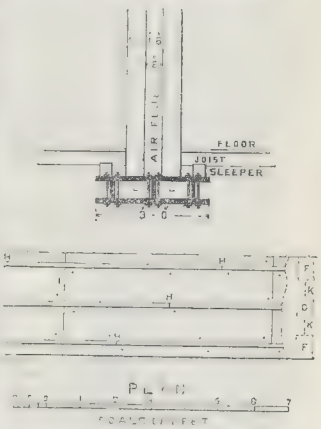
It was contended, that for merely conducting a large quantity of water, the bridge aqueduct of Roquefavour was unnecessarily substantial and expensive, and the example of the Bristol Waterworks was quoted as a case in point. The water was there derived from the Mendip Hills, sixteen miles distant: an ample channel conducted it along the comparatively level country: the hills were traversed by tunnels, one of them being 1¾ mile in length, through magnesian conglomerate rock: several deep ravines were crossed by aqueducts, and in the undulating, or, it might be called, hilly part of the line, pipes were laid with culminating points, crowned by obelisks concealing air-pipes, by means of which the ventilation of the entire line was achieved. Three of the aqueducts were each composed of an oval tube, 4 feet 8 inches by 3 feet 6 inches of wrought-iron plates, ⅜ths inch to $\frac{7}{16}$ths inch in thickness, rivetted together; two of them being 834 feet, and the other 400 feet in length: there was also another of cast-iron pipes. Each wrought-iron tube was supported in the centre on an equilibrium pier, and so placed on balls as that, whilst longitudinal motion was not entirely prohibited, it was not encouraged, but lateral action was provided for. Each end, worked in a length of 10 feet of clay puddle, to allow for expansion and contraction; and on the top of all the piers, which were 50 feet apart from centre to centre, the tube rested in cradles containing balls, acting as rollers for aiding the motion. The loftiest pier was about 60 feet high above the ground level, and the gradient over the aqueducts was about 5 feet per mile. The cost of these aqueducts was 16*l.* 10s. per lineal yard, including all expenses, and they were capable of discharging five millions of gallons of water per diem.

THE CHAPTER-HOUSE AT SALISBURY.

YOUR valuable paper contains some excellent observations on the restoration of the royal tombs in Westminster Abbey, which certainly deserve to be more generally known.

The question of restoration, I think, was fairly discussed at the Institute of British Architects, and I am of opinion that no restoration ought to be proceeded with until some such rules as those suggested and laid before that meeting are decided on.

But of all that has been written and said on the royal tombs, I have not yet seen one word written or said in the defence of an exquisite work of art of the Early English period; I mean the Chapter-house of Salisbury Cathedral, which is to be "restored" immediately, as a memorial to the late bishop; and what is more to be dreaded than all is the "scraping off" the surface of the exquisitely carved foliage and the "restoration" of the figures in the relievos.



It is said that the workmen of the present day can imitate anything, as they are all copyists. As a specimen of this, look to the stained-glass window in this cathedral lately executed, containing a medallion copied from Raffaelle, of St. George, in armour of the sixteenth century, encircled by borders and patterns of the thirteenth century. Ask an artist of feeling to restore, he will tell you he would rather hand down any work, mutilated as it might be, to future students, than destroy their interest by any additions of his own. Canova, when asked to restore the Elgin marbles, replied—"It would be sacrilege in him or any man to presume to touch them with his chisel."

Restoration has done its fearful work of destruction already in this cathedral. Look in the choir: the original Early English oaken stalls have their "additions" in the shape of modern canopies constructed with deal, ornamented with castings in lead and plaster, daubed over with chocolate paint. Examine the restored Hungerford Chapel, which you are told is of iron; but you will find that if ever its ornamental parts were of iron, they are now of painted wood. Against the tower-piers, brackets, if once of stone, are now certainly of whitewashed deal.

SARISBURIENSIS.

SLATE FOOTING TO PREVENT DAMPNESS.

IT has often struck me, when passing by the shops in London and other cities, where the pavement is laid against the shop front, and almost excluding daylight, much more the pure air, that some plan might be adopted to prevent the damp and offensive smell. Annexed is a plan for a slate footing, whereby a bottom is obtained for the walls that greatly assists the foundation by its construction, and a current of fresh air, obtained from the highest part of the house, is kept constantly under the wall and floors, and the surplus water carried away.

The annexed diagram shows the slate top and bottom, 1¼ inch thick, and the partitions 1½ inch thick, tongued into the top and bottom, secured with iron rods.

F. Ventilators in top of drain.
G. Opening under air-flue.
H. Joints of partition; in no case to be opposite, but broken, as shown, for strength of footing.
I. Joint in bottom.
K. Ditto in top.
L. Air-flue and water-drain: it is proposed to cut weep-holes at joints in partition, or perforate them, for the purpose of carrying away any water that may accumulate in foundation, to drain, with a proper trap, &c.; the holes to be cut about 1½ inch from bottom.

R. MARRABLE.

THE ARCHITECT OF ST. GEORGE'S HALL.

M. DE VOLTAIRE, says,* "*Colbert, le Mécène de tous les arts, forma un académie d'architecture en* 1671. *C'est peu d'avoir des Vitruves, il faut que les Augustes les employent.*" And in another place,† "*Il n'est pas aussi facile à un génie né avec le grand goût de l'architecture de faire valoir ces talens, qu'à tout autre artiste. Il ne peut élever de grands monumens que quand des princes les ordonnent. Plus qu'un bon architecte a eu des talens inutiles.*"

When the incipient Vitruvius contended with a score and a half of other young and able aspirants, and carried away the prizes in three, if not four, competitions for public buildings in Liverpool, he was unknown to, unconnected with any one there, and the designs under

* "Essaie sur l'Histoire Générale," tom. VII. p. 24.
† Ibid. p. 308.

symbols; the names of the several competitors being unknown till the corresponding sealed letters of the victors were opened. Herein Vitruvius found an Augustus in the wealthy and liberal committee of management, which proposed and decided the rewards of merit; and I fear that many a good architect found that his talents were, as yet, useless, although I believe that many of them have since found liberal patrons. This, however, I do know, that in the whole trickish history of architectural competitions, few have surpassed those of Liverpool for purity and honesty.

It is said of St. George's Hall, that the style is not Classical, being a mixture of Greek and *Italian!* unfit for modern uses. The windows are modern and unsuited to the building. The attic is faulty and ought to be removed. The circular portico at the north entrance is faulty. The building wants vestibules and entrances.

The greater part of these assertions are given as opinions, without a case being stated whereon to found them; and men's opinions, or persuasions of the mind, without proof or certain knowledge, are free to be given at will, and may be as freely examined. A wise old builder, "Rare Ben Jonson," says of this persuasion of the mind, "Opinion is a light, vain, crude, and imperfect thing, settled in the imagination, but never arriving at the understanding, there to obtain the tincture of reason."

The design is not Classical: admitted, if by Classical they mean a servile copy of Greek or Roman originals; but the best European critics have admitted that it is better, being a tasteful adaptation of the beauties of the Greek and Roman styles,—such as Ictinus would have used had he flourished in the Augustan age of Rome, or as Vitruvius would have invented had he been associated with Phidias in building the Temple of Jupiter Olympus, in the golden age of Pericles:—*

> "Phidiaco si digno Jovi dare templa parabit,
> Has petat a nostro Pisa Tonante manus."

The "Italian" I cannot find in this unclassical mixture, but as I cannot prove a negative, I leave it to the plaintiffs.

The round portico I leave to those pure tastes which have raised the immortal Rotundo of Tivoli's cascades, and the gem of Athenian architecture, the choragic monument of Lysicrates, by poets and painters to the summit of beauty; and have been successfully imitated and adapted, *not copied*, by Wren, in his singularly-beautiful circular porticoes of the north and south transepts of St. Paul's; by Soane, to connect the north and west fronts of the Bank of England, and to conceal a frightful angle; which last has been commemorated by Wyon's fine medal, given by the architectural students of the Royal Academy of Arts to their tasteful professor; and in the present case as the entrance to the Civil Court of the architectural pride of the Royal Duchy of Lancaster.

I do not subscribe to the opinion that the outside of a building should not agree with its interior, and therefore cannot agree with the desire to remove the attic, which is part and parcel of the building, any more than to take away the upper story of St. Paul's, although it is a mere screen to conceal the Gothic construction of the nave and aisles, which the detestable Stuarts forced Wren to adopt in preference to his favourite design, preserved in his engraved works, and in the decaying model in the cathedral.

Of the want of entrance-halls, be it remembered that the north and south entrances supply them, and that the sides are corridors, when the building is used as the county tribunal of civil and criminal justice; and the two law courts, as principal entrance-halls, when used for musical or scientific assemblings. And every one admitted that when the doors of the Crown Court were thrown open on one of the grand concert nights, what a splendid vista and termination it formed, when viewed from the southern end, now blockaded and barricaded by the organ, which, magnificent and splendid as it is to be, has no right to intrude as Leviathan, hugest of *organic* things, and intercept the grand view from end to end, that its architect intended. The organ is a piece of furniture, and should have been placed on one of the sides; and has no more right to spoil the architecture of this noble, harmonious, and admirably-proportioned hall, than one of our most gracious Queen's grand pianofortes has to destroy the harmonic proportions of the finest saloon in the finest of her Majesty's royal palaces.

The late Mr. Thomas Hope, who wrote learnedly and tastefully on furniture and other architectural episodes and accessories, to the great wrath of the *Edinburgh Review*, would not suffer his organ-builder to damage his beautiful music-room in Duchess-street, and ordered his architect to design the case and place the instrument as an incident in the composition. So much for opinion, and I will now take leave to observe upon a few matters of fact.

Having thus far endeavoured to relieve the minds of the generous people of Liverpool from the fears that they have had imposed upon them by their trustworthy committee and council, which have now honourably delivered up their management, a building devoid of taste, originality, strength, and beauty, I request the favour of being permitted to reply to some misrepresentations of facts concerning the architect whom the magistrates and people of Liverpool have been pleased to honour.

On his lamented death, a gentleman, who could have known better, informed the public through the Liverpool newspapers, that he was the son of the *late* Mr. Elmes, which that person, as soon as he was told of it, repudiated, and added, that although he had been long buried, he was not yet dead.

In a long and laboriously-detailed history of the building, the competitions, the decisions, &c.* the author has appended a biographical sketch of the architect so wide of exact truth, that he can never expect such praise as the last number of the *Quarterly Review* bestows on Forster's "Life of Goldsmith," as a perfect model of biographical writing. On the contrary, Boileau d'Espreaux's reply to Louis XIV. when he showed the poet some of his own royal versification, would be more apposite. He said, "Nothing, sire, is impossible to your majesty; you wished to make bad verses, and you have succeeded." I do not say the biographer has wilfully perverted or invented facts, the truth or falsehood of which he could easily have ascertained; but if he had striven with all his might to write things that are not, he could scarcely have succeeded better.

He first informs us that his hero was born in London, whereas he was born at Oving, near Chichester, in Sussex, in the house wherein his father then resided, and which had been the residence of the celebrated landscape painter, "Smith, of Chichester." He was baptized by the Rev. T. Wooderoffe, M.A. his father's school-fellow at Merchant Tailors' School; and the dates of his birth and baptism, and his names and parentage, are recorded in the registry of that parish.

He admits that the young architect distinguished himself in *two* competitions, whereas the number of his works was so great at the time of his premature death, as to warrant the eulogium of Martial† upon a young conqueror in the athletic games of the Romans, and had won so many palms, that Death, when he enumerated the number of his victories, took him to be as old in years as he was abundant in honours.

The biographer goes on to state, that "he was the son of James Elmes, well known by his 'Memoir of Sir Christopher Wren,' and by his work on Dilapidations. *He* (?) was also associated with Haydon in a 'Dictionary of the Fine Arts.'" Who is meant or implied in this obscure sentence? If he means the son, he is wrong, for that dictionary was published in 1824, when he was a little boy of ten years old, and at school at Mortlake, in Surrey. If the father, he is equally wrong, for the twice-a-week meetings between Haydon and Elmes, at their respective houses, in Lisson-grove and Charlotte-street, Portland-place, had ceased by the termination of "Elmes's Quarterly Review," "The Annals of the Fine Arts," to which Haydon contributed many papers, to which he attached his name or initials; by Haydon's marriage; and by Elmes's removal to Hammersmith-terrace, where he wrote and published his Dictionary without any accord with Haydon, whom at that time he seldom met. These facts were known to the excellent printers of the work, Messrs. Whittingham, of Chiswick-mall, his neighbours. His only assistant in the work was, as acknowledged in the preface, his friend Mr. James Ollier, in the latter part of the work; the alphabet, and the greater part of the materials being finished by the author.

He admits that the son was in his father's office till he was twenty-one years of age, but says nothing of their subsequent partnership, when they designed and superintended the pile of buildings on the site of the far-famed Westminster Cock-pit, in Park-street, and the South Mall, St. James's Park, as the hundreds of drawings made and signed by them, and living witnesses in London, Liverpool, and our East-Indian and Australian colonies can testify.

I could continue my observations to a greater extent, but am willing, if Mr. Boult intends to publish his history of St. George's Hall, &c. to furnish him with any biographical facts of its architect that he may wish.

Two other statements, with which that gentleman has, I believe, nothing to do, I must observe upon. One is that he shared the design with Mr. John Stephens, who had an influential relation on the committee. This is pure invention,—that young gentleman was an articled pupil of mine; and whatever his qualifications as an attentive and industrious student may have been, taste in architecture had no place in him, as his fellow-pupils can prove. And for his relations, his father was a solicitor, with offices in Jermyn-street and residence at Twickenham, both accomplished disciples of Izak Walton, and his brother, a merchant in Ceylon.

As to the absurd pretensions of Mr. Bardwell being the parent of St. George's Hall, the fact is, that the first idea was formed by the young architect, when in his pupilage, and competing as a student in the Royal Academy of Arts, for a triune design, either for a royal palace, with the two Houses of Parliament, or for a building to contain the Royal Academy, the Royal Society, and the Society of Antiquaries, I forget which, but can find, if necessary. There was the germ of the united building at Liverpool, and I can produce living witnesses of the fact.

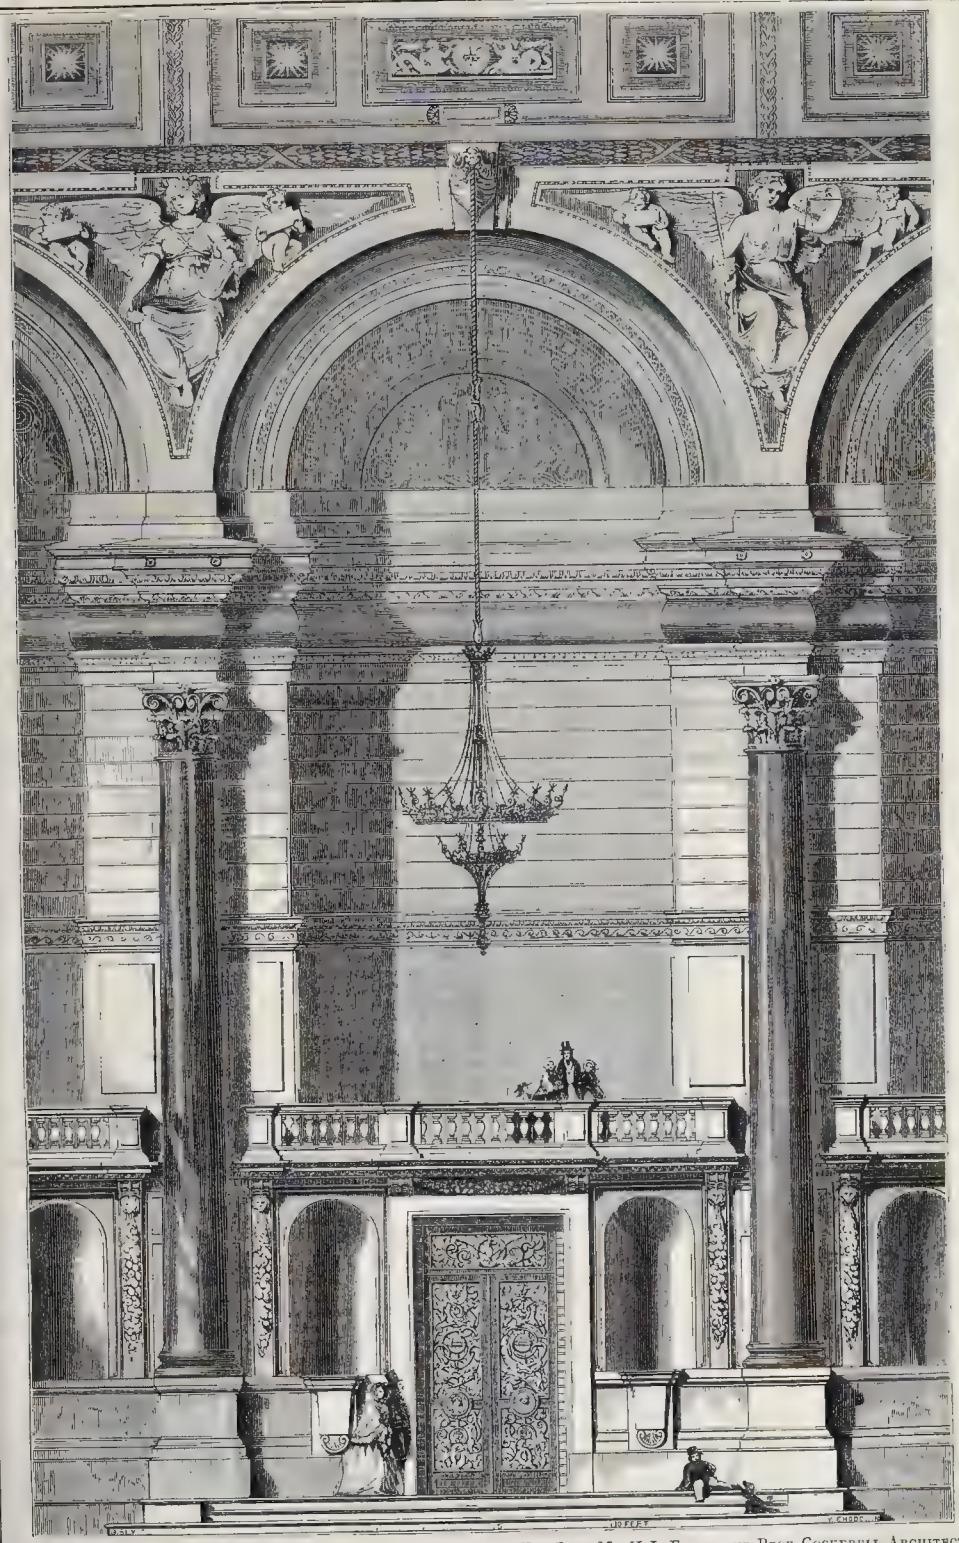
He was admitted to the freedom of one of the twelve chief companies of the City of London, by patrimony, when he put up for the office of City architect, and which he declined, when the corporation made it a *sine qua non*, that their architect should give up all private practice.

In his own address to the Lord Mayor, Aldermen and Common Council of the City of London, he says, "My earliest studies were directed by my father, and I trust it will not be considered that my time was unprofitably spent, when I state that it is more than twelve years (*i. e.* in 1831) since I was admitted a student in the Royal Academy, a position that indicates considerable previous knowledge of the art. From that period I have been constantly engaged in the practical pursuit of the profession, devoting all my leisure to the prosecution of its higher studies." There is his autobiography in a nutshell.

But whatever his biographer may think proper to say of me, one thing I shall be proud of to the day of my death. Like the aged warrior in Ossian, who boasted that his proudest glory was to be named as the father of the youthful conqueror, so do I subscribe myself,

THE FATHER OF HARVEY LONSDALE ELMES.

We add to our previous illustrations a view of one compartment of St. George's Hall, showing the gates.



HACKNEY BAPTIST CHAPEL COMPETITION.—A correspondent finds fault with the proceedings of the committee in this matter, especially that having selected the design of one architect, they have appointed another, who did not compete, to carry it out. On the face of it this seems unjust, but without knowing all the particulars, we might be *as* unjust, if we expressed an opinion. Architects go into these matters with their eyes open, and usually deserve the treatment they experience.

A COMPARTMENT IN ST. GEORGE'S HALL, LIVERPOOL.—The Late Mr. H. L. Elmes, and Prof. Cockerell, Architects.

THE CASTLE AND THE CHURCH.

A DESCRIPTION.*

HIGH on a rock a lordly mansion stood,
Towering with pride above the ocean flood,
That, distant far beneath, with sullen roar,
Dashed foaming o'er the jagged and barren shore.
Beyond, across the waves, an island rose,
Oft robed in mists, and wreathed in tardy snows,
That lingered long upon this northern world,
Where winter's sparkling flag so late is furled.
Reluctantly the frost-bound scene would change,
The mists clear off, and give a wider range
To vision: and the island reared on high,
Its form fantastic 'gainst the western sky.
No human dwelling smiled upon its face:
To water-fowl alone a resting-place
It granted; but it gave to man a name,
That oft was blazoned on the roll of Fame.
The rock-reared castle was the dwelling-place,—
The noble home,—of this more noble race;
And all that wealth and genius could impart,
To glad the eye and captivate the heart
With beauty, had been dealt with lavish hand,
To form an Eden from the rocky strand.

Long rows of stately trees reared their proud heads,
Which centuries had aided to adorn;
And brilliant flow'rs in warmly-sheltered beds,
Strewed varied pictures o'er the sloping lawn.

Around its edge a babbling streamlet gay,
Added fresh beauty to the changing scene;
Now smiling in bright sunshine, then, in play,
Hiding its eyes beneath a veil of green.

* * * * *

From out the trees which girt the castle round,
Not far removed upon a sloping ground,
A grey old weather-beaten tower rose,—
One of those massive structures which disclose
Long by-gone histories to the practised eye,
And seem the lapse of ages to defy.
Joined to the tower, but in less rigid style,
Was built the church, an ornamented pile,
Whose high-pitched roofs such varied lines combined,
Rich pinnacles and gables,—that inclined
The eager eye to wander on, and trace
The thousand beauties scattered o'er its face,—
The fond supporting buttresses which press
Against the walls with tender lovingness,
Casting deep shadows into each recess,
Heightening by contrast their own airiness,—
The slender shafts on which the arches rest—
So slight, yet with sufficient strength imprest—
Wearing with grace rich crowns of forest leaves,
Which mocking stone lightly around them weaves,—
The portal, with its clustered columns grouped
In closer masses, and its mouldings scooped
Into deep lines that darker shadows gave,
And framed—as 'twere a picture—the broad nave,
That spread within the opened doors, and showed
Rich wealth of beauty lavishly bestowed,—
The polished shafts, that gracefully upreared
The pointed arches, which in turn appeared
With ease aloft the fretted roof to raise,
Whose vaults oft echoed with glad hymns of praise,—
The deep-pierced windows, with their slender threads
Of stone-wrought mullions, and their traceried heads
Filled in with tinted glass, that but obscured
Earth's turmoil, while the light from heav'n poured
In streams of glory through each coloured pane,
And soothed away the soul from thoughts profane.
But above all the eastern window shone
In carved and painted beauty all its own;
An humble emblem of the All-seeing eye,
Which sheds its glowing radiance far and nigh,
Beaming on those whom prayer has brought more near,
But willing still to lighten and to cheer
Those heedless ones who wander on afar,
Where cold Indifference has placed her bar.

The wond'rous art of skilful men, had wrought
The yielding stone to forms with beauty fraught;
And lace-like pinnacles and fretted heights
Shone out like jewels in the coloured lights.
The carved and time-stained oak contrasted well
With the gay beams that o'er its surface fell,
And flowing outlines of the paler stone,
While each gained beauty from the varied tone.
High on the left a noble organ stood,
Forth from its deep-voiced soul to pour a flood
Of richest harmony, when cunning hands
Should loose its chill and silence-woven bands.
These oft were Ina's, for it pleased her well
To wake the slumb'ring melodies, which fell
At first so softly on the ear, but soon,
With trial of their strength, more 'venturous grown,
Would each sweet cadence lovingly prolong,
And rouse the echoing fabric into song.
Up to the roof the winged voices sprang,
Along the vaulted nave vibrating rang,
Till carried out upon the winds afar,
They hushed their murmurs 'neath the ev'ning star.

* From "The Lady Ina," an unpublished poem by a lady.

NOXIOUS TRADES AND CELLAR DWELLINGS IN THE METROPOLIS.

AN attack has been made upon the district surveyors of the metropolis by the President of the Board of Health, in a letter to Lord Palmerston, under date of the 14th of November last, and printed, with some documents, upon which the allegations are said to be founded, in the Sessional Paper, No. 10, of the House of Commons. The district surveyors may fearlessly meet these allegations, though they certainly are made in stronger language than is usually adopted in public departments.

The refutation of the conclusion of the letter that the district surveyors had neglected their duties in respect of these important sanitary matters might be met by the assertion that many of the surveyors are known to have interested themselves philanthropically in the improvement of the position of the lower classes, and yet that these same surveyors have not availed themselves, in their exertions, of the power which the president supposes the Metropolitan Buildings Act to have placed in their hands. But, indeed, nothing is clearer to those who have studied the Act that they have no such powers given to them.

Now, first with reference to noxious trades and businesses. One case, and *one only*, has been adduced (p. 3 of the Return), to prove the *general* neglect of duty of the district surveyors in this particular. This case is a soap-factory, &c. in Old Gravel-lane. Dr. Glover, who inspected it, says that "The Building Act, 9th August, 1844, provides that after the passing of the Act, no such trade shall be commenced or carried on" (the Act says *newly* carried on, but the Doctor did not wish his only case spoilt). "On inquiry (he continues), I learnt that this factory commenced after the passing of the Act, and, therefore, comes under the provisions of the Act." Now, if the doctor will look to Robson's Directory for 1839 or 1845, he will find the soap-factory and tallow-melting business described under the name of the father of the present owners of the business. The Act, therefore, permits the continuance of the business till 1874. The inference drawn by the Secretary of the Board, from Dr. Glover's Report, is also quite unsupported by that document. The secretary says (p. 3), "Dr. Glover describes the good effect produced by threat of proceedings under the Act;" but the doctor's report, on the contrary, meekly says, "should legal proceedings fail," &c. It is these garblings which make it difficult to give a perfect reply. It is like a defence of one's self from a shower of mud.

Again, the district surveyors are charged with having, on their own admission, done nothing to "make known or enforce the restrictions" on these trades. Now, they were never asked the question, whether they had done anything to "*make known*" the restrictions, nor whether they *had enforced them where necessary*. Those who read the documents appended to the Parliamentary paper will see, by reading the registrar's circular to the district surveyors, the trap set for them by the Board of Health. It is a simple demand for a "*return of proceedings taken*," &c.; and in those numerous districts where no such businesses exist, no return could be made of proceedings taken against them; and in those where there are such businesses established at 1844, no proceedings *could* have been taken against them, but only against newly-established ones, which the returns show to have been taken. Also, it will appear that the district surveyors have "*made known*" the restrictions, but that was not one of the questions asked them.

As to the general policy which should be adopted with regard to these trades, it may be observed, that the sudden abolition of them would occasion great distress in those districts where the labouring population is engaged in them, and the depreciation of the property would be very great, to the ruin of many of the manufacturers; whereas the Act, by requiring the abolition in 1874, has already caused a movement in some of the most offensive of the trades, which will lead to their removal in a short time into the country. Perhaps, therefore, immediate mitigation will be better than immediate abolition.

With regard to Cellar Dwellings.—It may be remarked here, that not a single question has been asked of any district surveyor on this subject, but the language of condemnation has been applied in the strongest manner. Here, truly, a single case is not brought alone, but 1,132, in *part* of one parish, Marylebone. It was received from an anonymous and "*unofficial*, but trustworthy source." A subsequent return was obtained from the police, which, not justifying the former information, it was attempted to be brought up to it by taking in the *whole of Marylebone and Paddington*

Now let the policeman who took them, be asked whether he is acquainted with what the Act requires in this behalf, and particularly whether every such cellar, first, was a separate lodging; second, was the specified depth underground; third, was under 7 feet high; fourth, was without the required area, windows, and fireplace. But it is unnecessary to argue further upon these unfairly insinuated and shifting foundations of the letter.

Whether the facts are as alleged or not, the Act is entirely misapprehended in respect of the functions and powers of the district surveyors. The registrar in his letter to the secretary of the Board of Health (p. 14), clearly points out their powers with respect to the *use* of buildings under sec. 18. Section 68, which is insisted upon by the secretary, shows clearly the general methods in which the surveyor is to perform his duties. Sections 13, 14, 17, 18, and schedule M, show him his manner of proceeding, to carry out those duties as to all structural questions; as do section 23, and following ones, in respect of the difficult questions of party walls; section 40 and following ones, with regard to ruinous buildings; section 43, with regard to dangerous projections and chimneys; other sections and the schedules giving the minute rules which he is to cause to be observed.

But power is not given, and was not intended to be given, to district surveyors to enter upon premises, to inquire whether a cellar dwelling is let as a lodging separately from the rest of the house, and he cannot possibly ascertain it. Counsel's opinion has been taken to ascertain in this respect his powers and duties, and why did not the Board of Health first take this course instead of laying a groundless accusation against a whole body of officers? The overseers are the parties charged with these duties at present, or it is in the power of a common informer to sue for penalties for breach of these provisions; but the district surveyor, even if he be aware of the fact of an illegal occupation of a cellar, actually *cannot frame an information* to his superior officers, the official referees, against it.

The district surveyors must await with patience the result of these unfounded imputations, but they may the more readily do so, as all must feel convinced that the Legislature will afford them a fair hearing before adopting measures corresponding in strength with the language of the letter. A SURVEYOR.

OUT of doors there is but one opinion on the subject, and that is, that there is no ground whatever for the charge made against the district surveyors. In the last number of the *Justice of the Peace* (a well-known legal journal), there is a leading article on the subject, wherein that opinion is expressed strongly. The writer says in the course of it:—

"Charges so sweeping and condemnatory surely merited the most careful inquiry and consideration before they were committed to paper. We believe them to be not only unwarrantable according to the facts, but they are made under a total misapprehension of the legal powers of the official referees and surveyors.

It is certainly convenient, in order to fix a liability, to construe an Act of Parliament in such a manner as will meet the particular case; but happily, in England at least, such is not the method adopted by our courts of law. The 68th section, as quoted by the president of the Board of Health, certainly requires the surveyors 'to see that all the rules and directions of the Act are well and truly observed in and throughout' their respective districts, but the rules and directions referred to in this section have no more to do with the habitation of underground cellars in London, than they have to do with the underground dwellings occupied by the yet 'unhutted' British army before Sebastopol. 'For that purpose,' that is, for the purpose of seeing that all the rules, &c. are well and truly observed, the section proceeds to direct that the surveyors shall,—do what? proceed, not to enforce the provisions of the Act with respect to underground dwellings, but to do various acts which have relation *solely* to works of construction within their district!

Further, by the 53rd section it is made the duty of the district surveyors to give full effect to the directions of the official referees, with respect to serving notices upon the owners and occupiers of underground dwellings, of the existence and nature, and consequences of the enactment. The official referees again are to be put in motion by the receipt of notices from the overseers of the number and situation of the dwellings within their respective parishes, of which any underground room or cellar is occupied as a dwelling. And again, but first of all, the overseers, 'on or before the first day of January, 1845,' were required to make their reports to the official referees. In other words, the complicated machinery of the Act required the overseers to put the official referees in motion, who again were to put the surveyors in motion, not to prosecute the owners or occupiers, but to give them the official referees' notice of the requirements of the Act. Moreover, the Act dealt only with the state of things existing on the 1st January, 1845, for it is clear that

the overseers, after that date, could not, according to the terms of the Act, make reports to the official referees, upon which legal proceedings of a penal nature could be based.

So far, therefore, as the law is concerned, we consider that the district surveyors have been most unjustly censured by the Board of Health. Instead of its being a reflection upon them that 'they have manifested no apathy in the execution of those duties under the Act for which they are repaid by fees,' we consider that the unworthy imputation is the best testimony that could be borne of their zeal and efficiency in the discharge of their legitimate duties under the Act."

The *Justice of the Peace* is entitled to the thanks of the district surveyors, for thus independently taking up the subject.

ARCHITECTURE AND THE PUBLIC.

"One who acknowledges the *Builder* to be a Teacher," seems to think I have borne a little too hard on the public, and suggests I may possibly be of opinion "that professors and teachers are useless, and that all true genius issues from the people, without direction—without teaching." Had such been my sentiments, the articles would never have been written. And if the people "*will* learn," if they will cease to treat new schemes as visionary dreams, and to fondly cherish the olden as the sole feasible styles; if they will no longer shelter themselves under the excuse that architects have preserved a mysterious silence on present anomalies, and will agree with Cicero that "*usus uni rei deditus, et naturam et artem sæpe vincit*," then let them take that initiative which *power* gives, and indicate, as they have never yet done, their desire for "an indigenous style, which shall rise at once out of the peculiar circumstances of modern days." With Lord Bacon, we say, "It does not escape us how untrodden and solitary is the way of this experiment, and how hard it may be to win belief in its practicability;" but, with him, "we may also derive some reason for hope from the circumstance of several useful inventions being of such a nature, that scarcely any one could have formed a conception about them previously to their discovery, but would rather have ridiculed them as impossible." An appeal to architects for "disinterestedness," when one of their number complains that the public is not sufficiently interested in the art, is hardly the most appropriate mode of furthering the end proposed. Justly, indeed, may a profession, "whose very existence is dependant on the favour of its clients," hesitate and weigh well the consequences of attempting to originate another method. For we all know but too well the immediate fate of innovators, however brilliant their ultimate triumph. Bacon, Descartes, and Copernicus sneered at and ridiculed; Galileo, on bended knees, compelled to aver the globe was immoveable; Harvey, Newton, Locke, and Franklin, all misrepresented, are but a few of the splendid examples which may tend to deter the young architect, struggling for a living, from sacrificing his present interests for doubtful chances of future reputation and posthumous fame. E. L. T.

WAR APPLIANCES.

For the transport of cannon, as well as of other war necessaries, over mud,—suggested, doubtless, by the shocking want of foresight in respect to an available line of communication between Balaklava and the English camp above Sebastopol, a want which has mainly contributed to reduce our noble army to the shame of a comparison with the starved and perishing Turks, rather than with the provident and thriving French,—it appears that the authorities at Woolwich have of late had under trial a vehicle constructed to meet this great defect in war appliances, independently of the more elaborate formation of roads or railways such as must surely be now in progress. A cannon on this plan is slung under a pole resting between two *high wheels, which, as they revolve, lay down a block or paddle, surmounted by an iron rail*, and dovetailing at its extremity with a succeeding block, continuing the line. Thus *the carriage lays down its own railway* as it progresses, while the sleeper from which it recedes acts as a lever, and lifts up the wheels from the bed of mud. It is said to be found that this carriage will transport the heaviest guns through a perfect slough. There are doubts, however, whether it will answer so well on rocky ground; as, during the late frost, the resistance of the hardened earth drew out some of the bolts from the wheels; but it is thought some modification of the paddles will overcome this impediment. The idea is nearly identical with a suggestion of our own some years since, for the improvement of locomotives on common roads; only, in that case, it was suggested that an elliptical or parabolical arrangement of revolving (jointed) rail might be worked concentric with each wheel, so as ever to lay down, as the whole progressed, a small portion of rail for the wheels to run upon, lifting it up as it passed over. The idea was by no means worked out into practical detail, but it was suggestive of such detail, and the present modification of the same idea seems to show its practicability, to a certain extent at least.——Apropos of cannon, a Mr. D. C. Mitchell, of Edinburgh, proposes to fire them without a touchhole, by means of electricity, through wires introduced into the cannon during its manufacture: such a gun, of course, could not, at all events, be "spiked," or have its touchhole choked up with nails, &c.——Workmen, we learn, are employed at St. Chanans in making several hundred pieces of cannon on the principle of the Minié rifle. These guns will carry 2¾ English miles.——In order to aid in redeeming Balaklava from the lamentable chaos into which it appears to have fallen, fifty dock labourers, it seems, have been selected from the London-docks, to be employed in unlading transports, arranging and warehousing stores, &c. They are to have 4s. a day, with rations; foreman, 7s. with rations, besides a bounty of 11*l.* each for outfit, and a free passage out and home. A Customs landing waiter goes as superintendent.——The last of the 2,362 wooden houses for the Crimea, made by Mr. Essie, of Gloucester, for the French and English Governments, was despatched week before last. The whole have been completed within the time specified by contract, and were sent away latterly at the rate of 108 per day. The quantity of wood used seems to have been enormous: indeed, Lord Raglan complains that each house exceeds two tons in weight, and scarcely any of them seemed to have been yet forwarded from Balaklava to the camp by last accounts ——We have been asked (says *Herapath*) as the English are so fond of companies, if it would not be a good speculation to send to the Crimea to collect the balls and shells the allies [and the Russians too, it might have been added] have so uselessly fired away at Sebastopol. If brought home and recast, it might be a good speculation, and perhaps compel the refractory iron-masters to reduce their prices 3*l.* or 4*l.* a ton. If forged, we should like much to see it calculated how many miles of railway they would supply rails and chairs for. The Russian balls, we believe, could not be made use of by the allies on account of being too large for the cannon they have till recently used! Surely, however, the toil of transporting ammunition to the camp will now be lightened by using them up in the cannon of large calibre now being planted in the trenches.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

At the ordinary general meeting of the session, held on Monday, the 22nd ult. Mr. F. C. Penrose in the chair,—Professor Donaldson described some of the constructions now in course of erection between the Louvre and the Palais Royal at Paris. We shall give some details hereafter. Mr. Henry Baker was elected fellow, and Messrs. E. G. Bruton and E. W. Tarn, M.A. associates. At the next meeting, to be held on the 5th of February, Messrs. C. C. Nelson and M. D. Wyatt, will give some notice of an illustrated work, recently published at Berlin, entitled, "Early Christian Monuments of Constantinople, from the Fifth to the Twelfth Century," by W. Salzenberg. The programme for the new cathedral for Lille, to cost 120,000*l.* independently of fittings, may be seen at the Institute by members.

KENTISH RAG-STONE.

During a recent perambulation in the county of Surrey, I was pleased to find that Kentish Rag-stone may be procured from a locality, about twelve miles more westerly than any that had heretofore come under my notice; and as a new source of supply of a well-known building material may be advantageous to the profession, I am induced to offer these few remarks to your notice.

At about one mile and a half south of Godstone, the bottom beds of the lower green sand formation rise suddenly at an angle of nearly 45 degrees, presenting decisive evidence, either of a sinking towards the chalk, or of elevation in an opposite direction, to form the escarpment of Tilburstow-hill. This stone contains a superabundance of quartzose grains of sand, often angular, or slightly rounded, interspersed with very minute plates of mica, and scarcely any carbonate of lime. The strata vary in texture and composition, from the state of soft sand-rock to that of irregularly shaped nodular masses of great hardness, in most cases tinged with oxide of iron, of various shades, from whitish grey to a deep ferruginous brown. The transition is sometimes very sudden, from loose sand into compact stone of a dark grey colour, in which the original sandy structure is scarcely discernible; in other specimens the gradations are almost insensible. Between some of the beds, clay, having a smooth and saponaceous feel, is rather abundant: it is, in fact, a kind of "*fuller's earth*."

In their geological position, the rocks of Tilburstow-hill correspond with those from which the Kentish Rag-stone is procured in the neighbourhood of Maidstone, or through the central part of Kent, and in some of the minor features they are similar. The softest sand-rock of Tilburstow quarry may fairly be considered identical with the "Hassock" of the Kentish Rag district; and if the harder varieties were removed to London, or to a distance from the quarry, I doubt whether the most experienced mason, or learned mineralogist, could detect the difference between this mineral and its counterpart from the Rag-stone district of central Kent.

C. H. Smith.

Miscellanea.

Artistical.—The third part of "The Royal Gallery of Art" (Colnaghi and Co.) contains Mr. Uwins's charming little picture, "Cupid and Psyche," engraved by Mr. Lumb Stocks; the "Battle of Meanee," by Armytage (who has scarcely fulfilled his early promise), engraved by J. B. Allen; and Ruysdael's "Windmill," characteristically rendered by T. A. Prior. The letterpress accompanying the first gives a few particulars of Mr. Uwins, who, we are sorry to hear elsewhere, is very ill. Mr. Uwins was first placed with an engraver, but soon left the *burin* for the palette. In 1811 he was member of the Society of Painters in Water-colours; was elected an associate of the Royal Academy in 1833, and a member in 1839.——Messrs. Gambart have recently issued a pair of very clever coloured engravings, after admirable little pictures by Huggins, of domestic fowls, which were exhibited in the Royal Academy last year.

Cemetery for Crieff.—Lady Willoughby de Eresby has given to the town and parish of Crieff, in Perthshire, an acre of ground for a public cemetery. It lies on a slope towards the river Earn, and commands a most beautiful view of the surrounding Grampian Hills and the Vale of Strathearn. The cemetery is laid out with walks and shrubberies, from the designs of Mr. G. P. Kennedy, architect. The necessity for such a place of interment has been long felt by the town, the old churchyard lying, as usual, in the centre and thickly inhabited part, and completely filled up. The land is vested in the names of trustees, and their successors to be elected when necessary, and the management of the cemetery is left to a committee. The site is of a fine sandy gravel, and, after allowing for walks and plantations, it will admit of 1,000 layers or graves. It is inclosed on three sides by a wall in bricks, varying with the levels; the fourth side by mason-work and iron railings, with a central entrance. These works are to be paid for out of the produce of the sale of the layers or graves, by the persons claiming such right, at fixed rates, which vary from 2s. 6d. to 30s. each grave. No family is to be allowed to take more than six layers, and there are to be no fees on interment, except for grave-digging. We mention this considerate act on the part of Lady Willoughby more particularly with the hope that it may induce other proprietors in similar circumstances to do likewise.

Means of Communication in Railway Carriages.—A working carpenter, William Glazier, has invented a little arrangement of gutta-percha tubing and valves, which might, we think, be made to aid in giving to passengers the means of communicating with the guard, the guard with the engine-man, and *vice versâ*. The necessity for the means of communication between the passenger and guard we have again and again insisted upon.

Public Baths and Wash-houses.—The following return shows the number of bathers and washers, and the receipts at the establishments now open in London, for the year 1854:—

District and Name of the Establishment.	Number of Bathers	Number of Washers	Total Receipts. £. s. d.
Whitechapel, The Model	156,153	45,124	3,036 16 0
St. Martin-in-the-Fields	127,551	42,780	2,585 17 11
St. Marylebone	161,349	36,276	2,602 18 10
Westminster, St. Margaret and St. John	103,228	62,798	2,191 5 4
Greenwich	38,100	7,254	954 12 8
Westminster, St. James	111,471	41,116	2,147 8 11
Poplar, All Saints	53,186	10,078	1,027 2 8
St. Giles and Bloomsbury	185,364	42,796	3,587 12 1
Bermondsey (opened 19th June)	61,899	4,636	873 8 10
Lambeth (re-opened 2nd April)	124,250	...	1,957 17 6
St. Pancras, George-street	77,553	128,344	2,192 17 2
Totals for London during 12 months	1.220 739	421,101	23,157 17 9

MANUFACTURERS AND THEIR WORKMEN.—The following instance of providence and sobriety on the part of workmen, and of mutual good feeling between them and their masters, is extracted from the report of the commissioner on the mining districts. On the high piece of moor land which separates North Staffordshire from Cheshire, called Mow Cop, a population of nearly 1,800 has settled within the last ten years, attracted chiefly by the large collieries of Mr. Williamson in that neighbourhood. Within that period upwards of 400 houses have been built, nearly 300 of them by colliers, out of their savings. The houses are disposed irregularly over the hill, and each has attached to it from ¼ to ½ an acre of land. The building sites being limited in extent, and the population increasing, the price of land has risen to 2s. per square yard, or about 450*l.* per acre, some spots to nearly double that sum. The houses are substantially built of stone, the plots of ground well fenced and drained, and well cultivated, and the roads levelled and made by the men themselves. The earnings of these colliers are from 20s. to 30s. a week, and their sons 8s. Their provident and orderly habits are attributed in no slight degree to the comparative absence of beerhouses, Mr. Williamson refusing to employ any man who keeps one. The different habits of the men at their "Goldenhill" works, only a few miles off, are remarkable: at these works the men are employed in the ironstone mines, and are all under contractors, who keep beerhouses. Mr. Williamson stated, that "the wages spent by the men at the Goldenhill works in beer, are here spent in building. First one house is built out of savings, then another. Some men have built as many as four: they put by the rent, and add to it what they save from their wages. Some of them keep a cow, as their land is brought into cultivation."

THE PLANS FOR THE SHEFFIELD SCHOOL OF ART.—The council of the Sheffield School of Art have at length gone through the labour of examining 116 plans sent in by 105 architects, for the school, about to be erected in Arundel-street. The labour of examination and analysis was confided to a sub-committee, consisting of Dr. Branson, the Mayor of Sheffield; and Messrs. E. Bury, J. J. Smith, and E. S. Howard. These gentlemen report that they spent much time in a careful analysis of the plans. They admit that several of the rejected *elevations* are equal in merit to the two they recommend. After repeated and long-continued sittings, they reserved twelve designs for more special consideration; and after the closest investigation of their merits, they unanimously resolved to recommend the two designs marked respectively "Cavendo tutus" and "Speranza," as occupying, in their opinion, the first and second place. The plan marked "Cavendo tutus," with slight and inexpensive modifications, appears, they say, to fulfil all the conditions required, being at once simple and convenient in its interior arrangements, and displaying an elevation effective in its character, depending for its ornament on a judicious distribution of colour, arising from the employment of moulded and coloured bricks and tiles, rather than on the more costly workmanship of the stonemason. A difference of opinion, they remark, may exist as to whether one large single gallery for casts will be more effective in appearance than a longer and narrower gallery divided into compartments, as in the design marked "Speranza," but they have no doubt as to the greater convenience of the former for the purposes of the school. The committee, in conclusion, state that the plan marked "Speranza," which they recommend for the premium of 50*l.* is entitled to the highest praise for the excellency of its general arrangements and unexceptionable mode of lighting. The report of the sub-committee having been, on full examination, unanimously approved and adopted by the council, the letters of "Cavendo tutus" and "Speranza" were opened. The first was found to be that of Messrs. Manning and New, of London; and the latter, that of Messrs. Weightman, Hadfield, and Goldie, of Sheffield. Arrangements have been made to give the public an opportunity of inspecting all the plans.

REPAIR OF CRACKED CHURCH BELLS.—Mr. Ray, jun. a watchmaker, at Sainte-Austreberthe (Seine Inférieure), has discovered, it is said, a simple means of repairing the bells of churches, when cracked, without the tedious process of recasting them, hitherto considered indispensable.

PROPOSED NEW CATHEDRAL FOR THE ISLE OF MAN.—The *Manx Sun* states that the present diocesan (Dr. Powis) is busily interesting himself in the procuring of adequate funds for the erection of a suitable memorial, in honour of Bishop Wilson, who died in 1755; and that it is proposed to erect a cathedral, —the old Cathedral of St. Germans being a ruin beyond the possibility of repair. A committee is about to be formed, over which Mr. Wilson Patten, M.P. will preside as chairman. Several handsome sums in furtherance of these views, it is said, have been already offered.

NORTH OXFORD ARCHÆOLOGICAL ASSOCIATION.—The quarterly meeting of this Association was held on Saturday before last, at the Vicarage, Banbury, when various interesting objects were exhibited, including some ancient family papers belonging to Colonel North: and a paper on Foreign Cathedrals was read by the Rev. Mr. Miller, who said he simply meant to relate the impression which the first sight of those splendid monuments of former ages made upon himself, and endeavour in part to account for it. In the autumn of 1853, and the summer of last year, he visited a good many of the cathedrals of Belgium, and some in Germany, France, and Switzerland. Among them were some of the very first specimens which existed, for instance, Cologne, Antwerp, and Notre Dame, at Paris. Of course the exterior was the first thing one saw, and the first impression was produced by sight of it. He thought the first impression of foreign cathedrals was more grand than that produced by our own. That fact might be attributed in part to their great elevation. Their proportions, too, were perhaps fairer, and from atmospheric causes probably the stone was in better condition than in our own country. Altogether the first sight of these huge buildings was very fine. Nor was that effect altogether spoiled by the unfinished state in which almost all remain. He did not remember in all the Belgian cities having seen one cathedral in a thoroughly finished state. St. Gudule's, at Brussels, was the most perfect, but even there many details were wanting.

THE FUTURE OF BRITISH FARMING AS A BRANCH OF MANUFACTURE.—While noticing Lord Willoughby de Eresby's laudable efforts to mature the steam plough as an instrument in the evolution of industrial agriculture, we some years since suggested the probability of just such a vast extension of farming, as a branch of manufacturing industry, as steam power and machinery have already evolved in other branches of manufacture. Since that time there have been many indications that the idea has taken root in the public mind, not only of this but of other countries; and we now occasionally observe comparisons made between the possible future of British farming and the actual past of British manufacturing industry. Thus a M. de Lavergne has recently started a speculation on the possible "future" of English farming, in which he remarks that all these works of drainage, construction of buildings for stabulation, erection of steam-engines, &c. in aid of farming operations, of which we now hear, will cause the capital put into the land to produce at least one-third more of alimentary substances. The gross average production, which was equal before to 3*l.* per acre, will then, he calculates, be 4*l.* 10s.; while the average rent will probably rise to 30s. and the farmer's profit to 18s. per acre. The only question, he adds, is this—are proprietors and farmers in a condition to furnish the required capital? The question is one involving no less an amount than four or five hundred millions sterling. For any other country than the United Kingdom such an undertaking would be impossible: for her even, it is an arduous one, but only arduous. The nation which in the course of a quarter of a century has spent 240,000,000*l.* upon railways alone, may well employ twice that amount in renewing its agriculture.

NEW CHURCH AT ISLINGTON.—A meeting was lately held in the National Schools, Church-street, Islington, to concert measures for the erection of a new church in Arlington-square. Several liberal subscriptions were announced, and it was determined that the new church, which is to be dedicated to St. Philip, should be proceeded with as soon as possible.

GALWAY.—The Convent of Mercy, at Clifden, Galway (as formerly noticed in the *Builder*), is nearly finished, with exception of the schools, cells, and enclosure walls. Mr. J. S. Butler is (we believe) the architect. Similar buildings at Ballinasloe are in a very forward state, but we are told the funds for completion of each are deficient, and the progress delayed accordingly.

MEMORIAL OF SIR ROBERT PEEL.—A handsome monumental tablet has recently been erected by the sons of the late Sir Robert Peel, in the parish church of Drayton. It is of statuary marble and Roche Abbey stone, elaborately carved in the Tudor style, by Mr. White, of the Vauxhall-bridge-road, from the designs of Mr. Sydney Smirke, A.R.A. The following is the inscription:—

IN MEMORY OF
THE RIGHT HON. SIR ROBERT PEEL, BART.
TO WHOM THE PEOPLE
HAVE RAISED MONUMENTS
IN MANY PLACES.
HIS CHILDREN
ERECT THIS IN THE PLACE
WHERE HIS BODY
HAS BEEN BURIED.

HE WAS BORN, FEBRUARY, 1788,
AND DIED 2ND JULY, 1850.

THE THEATRE ROYAL AT BRUSSELS, recently destroyed by fire, was built in 1817 to 1819, under the direction of a French architect, M. Damesme, and cost, according to "*L'Europe Artiste*," 64,000*l.* Since then it has undergone three entire restorations, at a cost of at least 48,000*l.* in the whole. The new decorations during that period are set down at 4,400*l.* and the bas-relief of the portico cost 3,600*l.* making a total of 120,000*l.* Its re-edification is estimated by the same journal at 40,000*l.* It is to be hoped that our London managers are not lulled by apparent security into forgetfulness of the dangers which every night menace a theatre.

THE COMPETITION FOR ASSIZE COURTS, &c. TAUNTON.—We have received several communications on this subject, some of them commenting on the manner in which the county surveyor has been treated, and complaining of a member of the profession, who has permitted one of the magistrates to thrust him forward with a revision of the county surveyor's plan. The matter has since been thrown open to competition, and we shall be curious to see the result. If architects do not behave honourably towards each other, they can scarcely expect much consideration from the public.

PROGRESS AT BOSTON, U.S.—One of the most recent tokens of progress at Boston is the intimation that burials within the city are not to be continued after April of the present year, without special permission under peculiar circumstances, and then only temporarily.——The works of the enlargement of the State-house are now approaching completion. The library may not be finished until the 1st of June; but otherwise, the whole is so nearly completed, that all the apartments except the library are probably occupied by this time (end of January). The building, according to the *Evening Gazette*, "forms as tasteful and appropriate a public structure as can be found in the country. Its bold projections and fine masses of shadow will be yet much improved when they receive their final colours; but even standing as they do at present, they satisfy alike the eye and the judgment by their well balanced solidity." The valuable library, and records of the commonwealth, which have heretofore been exposed to so much danger, are henceforth, it is believed, assured of the most complete and perfect safety. The library-room, the most striking and important feature of the new building, is constructed wholly of fireproof materials in every part. The floors, staircases, bookcases, ceiling, and gutters throughout the whole structure are entirely composed of iron, and even the sashes, shutters, and frames are to be of the same material. The *Gazette*, in allusion to the cost of the whole of these works, notes that the cost of apparatus for merely ventilating our House of Commons, is four times the amount of the whole expenditure on the proper construction of the entire State-house addition. It extols the "noble patronage of art" displayed in the former instance. It would have been well, however, had the "apparatus" referred to been worthy of the expenditure and the patronage, instead of being most of it superseded as worse than useless.

MODEL LODGING-HOUSE ASSOCIATION AT BRISTOL.—A meeting, convened by circular, of gentlemen desirous of seeing improved dwellings for the industrious classes introduced into Bristol, was held in the Council-house, on Monday before last. The chair was taken by the Mayor, who was supported by the Bishop of Gloucester and Bristol, Mr. Commissioner Hill, and other gentlemen. There was a tolerably numerous attendance. The Chairman said he regretted very much that he had been unsuccessful in inducing the town council to take up this matter as a municipal duty, and to deal with it in an extended, comprehensive, and liberal manner for the benefit of the citizens at large.—The Bishop said this meeting gave him the cheering assurance that what he had been so long striving for would be accomplished, or that at least a good commencement would be made, which they all knew was half the battle. As they were to be united, he understood, with the Metropolitan Association for Improving the Dwellings of the Industrial Classes, he thought they had better take their name. They would thus obtain all the advantages resulting from their charter, the first of which would be restricted liability. It had been first intended that they should begin with a capital of 5,000*l.* It was now, however, recommended as expedient that they should increase it to 10,000*l.* which would entail upon them no difficulty or dilemma, as by the charter they could not contract debts for more money than had been received by shares. There was no desire to infringe upon the liberty of the industrial classes: on the contrary, it was a leading part of their system to encourage self-respect on their part. This was not to be considered as a charitable institution. They were to assist their fellow-citizens in making themselves independent. Appropriate resolutions were then passed, and the new association thus fairly set ngoing.

Important to the Timber Trade.—The case of M'Knight v. Clarke, which lately occurred at Liverpool, was an action brought in the Court of Exchequer, before Baron Platt, to recover the value of a quantity of mahogany purchased, as was alleged, by or on account of Mr. F. Clarke, of Jersey. The plaintiff is a Liverpool timber merchant. In March, last year, his firm received an order, through an agent of defendant's, named Melhuish, who afterwards informed plaintiff that defendant required a certain quantity of mahogany, and that his clerk had pointed out a lot lying on one of the quays for sale by a broker as the timber most likely to suit his principal, adding that he had seen a specification of the mahogany, setting out the different lengths, and that the price was 7d. per foot. The plaintiff eventually purchased the mahogany for 15*l.* per load, or 6d. per superficial foot. In consequence of there being only short room in the ship containing the previous order, short logs were selected and shipped. Defendant afterwards found fault with the length, and repudiated the whole transaction. Plaintiff said that he bought the mahogany by caliper measure, at 6d. per foot, which was equal to 9¼d. or 9½d. per foot by Liverpool measure. It was ultimately agreed that a verdict should be entered for plaintiff, and that the matter should be referred to some gentleman at the bar to say what sum ought to be paid.

The Builders' Ball.—The ball for behoof of the funds of the Builders' Benevolent Institution, let us once more remind our readers, comes off on 8th inst. (Thursday first), at Willis's-rooms, St. James's. The list of stewards is a good one, but there cannot be too many of the same kind, and it is very desirable that a decided effort be made at once to realise the almshouses, of which the Institution stands now much in need. There are now on the pension list, sixteen men receiving 24*l.* a year each, and eleven women receiving 20*l.* each; and all that is requisite to enable this builders' charity to rank fully with many others, which it ought to have preceded, is the possession of a series of comfortable almshouses in some select suburban neighbourhood; and that, we trust, the trade will now very speedily provide, as it ought to have done long ago.

Chester Architectural, Archæological, and Historic Society.—On 19th ult. two lectures were delivered before the members of this society by the Rev. J. G. Cumming, M.A. formerly Vice-Principal of King William's College, in the Isle of Man, but now Head Master of the Lichfield Grammar School, on "The History of the Northmen of the Isles," and "The Runic Monumental Remains in the Isle of Man." The lectures were profusely illustrated by drawings, casts, and rubbings, from remarkable examples of antiquity. The Rev. Canon Blomfield expressed to Mr. Cumming the thanks of the society for his addresses.

The Stanley Memorial Window.—I should have contented myself with asking your permission to state that the paper on the Stanley window, to which your correspondent (p. 47) refers, appeared *verbatim* in the December number of the *Gentleman's Magazine*, but there are circumstances attending the publication of this writer's statement which compel me to ask for space for a few remarks. The self-same observations, with a *tasteful* introduction—an unfair endeavour to deceive the public by assuming the editorial *we*—appeared in our county papers the week before Christmas. I will not occupy your space by going over each of his statements: your readers will find how he has exercised his ingenuity, if they will compare his letter with my paper. I will content myself with one instance. He cannot "accede to the notion that no Scriptural allusion is tolerable which is not directly taken from some Mediæval precedent." Your readers will conclude that I had evolved the "notion." Not a bit of it! From beginning to end of my paper no such "notion" is to be found. I objected to Holy Writ being "ransacked for parallels," not because there was no Mediæval precedent for it, but expressly on the ground of its being (as I thought) a violation of *good taste and Christian feeling*. One word more, and I have done. He states that all *tangible* objections made by me to the artistic part of the work were anticipated and overruled by the committee!! How was the public to know this, or how was I to know it? Your correspondent *now* asserts it; but how comes he to know it? and how is the public to judge of the value of his opinion? Supposing, however, we had it, on the *best* authority, that the committee had decided on all *tangible* objections to the best of their power, am I, or any one else, to be stopped from questioning their judgment, or from disapproving the result of their labours? As I have before stated, I may be wrong in my opinions, and would be glad, if I have fallen into error, to be put right; but I am not to be "put down" by misstatements and uncourteous remarks, however pertinaciously your correspondent may insist on obtruding them upon the public.—Henry Harrod, F.S.A.

The New Bill for the Removal of Nuisances and Prevention of Diseases.—The new Bill "to Consolidate and Amend the Nuisances Removal and Diseases Prevention Acts of 1848 and 1849," has been printed. It is endorsed with the names of Sir B. Hall, Bart. Lord Palmerston, and Sir W. Molesworth, Bart. The number of its clauses amounts to sixty-two. The first clause repeals the Acts 11th and 12th Vict. c. 123, and the 12th and 13th Vict. c. 111, saving proceedings in progress. The execution of the Act is to be intrusted to the local authorities, and the nuisances "abateable" include all filthy, unwholesome, or dilapidated houses, cellars, or premises (which the local authorities buildings, or premises (which the local authorities may declare untenantable, and shut up accordingly), all foul or offensive pools, gutters, ditches, cesspools, drains, ashpits, &c.; all animals "so kept as to be injurious to health," and all decaying or offensive accumulations or deposits. An inspector of nuisances, with a salary, is to be appointed by the local authorities. Clauses 14 to 20 provide for the removal of nuisances in the regular legal course—the penalties for contravention of orders to abate nuisances being 10s. per diem, and 20s. for "infringement" of such orders: local authorities to have power themselves to abate nuisances and recover cost. Clauses 21 to 33 provide for the cleansing of ditches by the surveyors of highways, the covering of open ditches, the prevention of the sale of tainted meat, poultry, and fish, under penalty of 10*l.* for each offence; and the abatement of nuisances from offensive trades or processes—such as candle-houses, melting-houses, slaughter-houses, and bone-houses, under a penalty of 5*l.* per diem. Clause 35 empowers the the General Board of Health to carry out orders of Privy Council for prevention of disease, by issuing regulations for the speedy burial of the dead, for house-to-house visitations, and for the dispensing of medicines, and the supply of medical aids to persons afflicted by or threatened with zymotic diseases. These provisions with respect to the prevention and mitigation of diseases will extend to Ireland. While such orders in Council are in force in any place, the local authorities will have the power of bringing overcrowded, and consequently unhealthy, houses under the provisions of the "Common Lodging-house Act" of 1851. Penalties may be levied on local authorities neglecting their duties under this Act. The expenses of the execution of this Act are to be defrayed out of borough rates, general district rates, "Local Improvement Act" rates, highway rates, or failing these, out of the poor rates. The constabulary and police force in their respective jurisdictions are required to aid in executing this Act. Clause 61 obviates the construction of anything in this Act, so as to impair any power of abating nuisances at common law.

The Leicestershire Architectural and Archæological Society.—A new society under this name has been formed in consequence of the meeting of the Lincolnshire and Northamptonshire Architectural and Archæological Societies at Leicester. The patrons are the Duke of Rutland and the Bishop of the Diocese; and the presidents are Lord Howe, Sir F. Fowke, and Mr. P. Herrick.

Increased Facilities at London-bridge.—A correspondent, Mr. M. T. O'Keeffe, C.E. suggests the formation of a superway for foot passengers across London-bridge, based on two rows of columns, 15 feet high and 30 feet apart, and so distributed as to divide the slow from the quick traffic below, while also supporting the transverse and longitudinal girders on which the superway would be laid, and which could be ascended to by some thirty easy steps The railway foot traffic, he further suggests, might be provided with a continued superway leading into or out of the railway terminus. The same suggestion might apply to Waterloo-bridge. So far from being unsightly, our correspondent remarks that it might be made, in the opinion of many, ornamental (as a Rialto), rather than otherwise.

Reseating of Trinity Church, Coventry.—Your notice of this is incomplete without the following, which we beg to hand you for publication:—Tenders for removing old galleries and pews in Trinity Church, Coventry, and reseating same in wainscot oak. Old materials to be the property of the contractor:—

Higham, Wolverhampton	£4,095	0	0!!
Rattee, Cambridge	2,850	0	0
Young and Co. Oxford	2,800	0	0
Broadbent, Leicester	2,485	0	0
Kingham, Ipswich	2,327	0	0
Pratt, Coventry	2,250	0	0
Taylor, ditto	2,247	0	0
Marriott, ditto	2,230	0	0
Robinson and Son, ditto	2,196	10	6½
Hall, Nottingham	1,950	0	0
Ruddle, Peterborough	1,767	0	0!! R.

Timber Sale at Abberley.—A Worcester paper reports a large sale of timber here on Wednesday week. The attendance was very large, consisting chiefly of small dealers, and the prices obtained far exceeded the valuation on nearly all the lots. Oak sold at from 2s. to 3s. 6d. a foot, and ash and elm from 1s. to 1s. 6d. There is generally a complaint that timber is not worth so much this season as last by from 10 to 20 per cent. and the large dealers are shy in making purchases, but all small lots have been readily sold at great prices to small purchasers, who are generally men new to the trade.

St. Stephen's at Vienna.—The *Athenæum* says, —The spire of St. Stephen's Cathedral, at Vienna, has just been repaired, at a cost of about 50,000 florins. More important restorations are spoken of, and the lively Viennese seem at last, in spite of their French bias, awaking to an appreciation of Gothic architecture.

Application of Liquid Manure to Subsoils and Roots.—Our readers may remember some details which appeared in our columns as to a new plan of applying liquid manure, adopted on some waste land at Wokingham, by way of experiment, by Mr. Wilkins. The result of a year's trial of this method has now been published. The liquid manure was applied through semi-cylindrical tiles laid convex side up on a water-tight floor of brick, edged round with bricks 4½ inches high, and covered with soil to a depth of 18 inches, in which the crops were planted in lines running coincidently with the tiles. The same sorts of seeds were planted in duplicate on the same sort of soil, but without either the tile or brick apparatus. To the former, liquid manure was applied about twice a week; to the latter, none was given. The results were quite extraordinary, especially with mangold-wurzel and carrots. The mangold-wurzel was produced, with manure, at the rate of about sixty-nine tons per acre, the average weight of the roots being twelve pounds each, whereas on the unprepared piece it was four pounds, and on a piece of ground prepared with a top dressing of liquid manure, six pounds. Italian rye-grass was cut five times on the prepared bed to one cut on the other; the fifth of the former being exceedingly tender and juicy, while the one of the latter was tough and dry. Potatoes were doubled in weight by the manure. Hemp and flax grew luxuriantly by its aid. In three months the hemp was six feet long, and a second crop was then planted, which grew to the same length. Mr. Wilkins says that even three crops, and for cattle, seven crops, annually, of the necessaries of life, might thus be produced. The cost of construction, however, is considerable. With bricks for floors he estimates it at 100*l.* an acre, but with gas tar, and sand, at 50*l.* There are other difficulties in the way of the application of this method on the large scale, but we think we can see how, by aid of steam power and a circulating system of valved and perforated manure pipes, such difficulties might be overcome, so far as inequalities of ground are concerned: whether to great profit remains as a further question. Mr. Wilkins lectured on the subject of his experiment lately at the London Tavern.

TENDERS

For Model Buildings, Lambeth:—

Lee and Son	£13,650	0	0
Kelk	12,900	0	0
Piper and Son	12,690	0	0

AN efficient COUNTING-HOUSE CLERK requires a RE-ENGAGEMENT, at a salary of two guineas a week.—Address, G. Office of "The Builder."

TO ARCHITECTS.

A GENTLEMAN of great experience is open to an ENGAGEMENT as an ASSISTANT in an ARCHITECT'S OFFICE.—Address to G. G. 39, Michael's-place, Brompton.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slats, &c Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention that defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing mills, Cambridge-heath, Hackney. WM. HUSTLER, Proprietor. Two Marble Masons wanted.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS. BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Deptford. Offices: 346, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods delivered, shipped, or carted with despatch, and at moderate charges.

GODSTONE STONE.—GATES and GEORGE beg to solicit the attention of architects, engineers, and builders to the above Stone, as being suitable for all purposes of construction, either as a substitute for brickwork, or in connection therewith, the price in most respects being about the same as ordinary brickwork. It can be obtained in large quantities, and to specify sizes, in rubble or rough square blocks, direct from the quarries —Information and samples given at Caen Wharf, Rotherhithe, and Hiberuia-chambers, London-bridge, Borough.

ANCASTER STONE, from the celebrated quarries of Mr. John Wilson, Ancaster, who has appointed GATES and GEORGE, Stone Merchants, his sole consignees for the London district Ancaster Stone, so generally esteemed by the building profession, for its great durability, economy, and general utility, as to require but a trial to secure the approval of architects and others for its more extended use in building.—Samples and other information can be obtained at the Great Northern Depôt, King's-cross; Caen-wharf, Rotherhithe; and Hibernia-chambers, London Bridge, Borough; or forwarded to address, free of charge.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Government Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES. — Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set: with jambs, moulded with large ogee on outer edge, set on plinths, Mantel, moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 50s. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on Tyne.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials lauded, wharfed, and carted.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1851 are NOW READY, and can be had on application, inclosing a postage-stamp.

N.B. A liberal discount to the trade.

UNDER HER MAJESTY'S ROYAL LETTERS PATENT.

INDURATED STONE COMPANY, for INDURATING and RENDERING IMPERVIOUS STONE, BRICKS, TILES, and other Building Materials. Completely Registered, Dec. 23rd, 1854. The Company are now in a position to execute orders and grant licenses for the use of their valuable patent. The great advantage to be derived from the use of a material not only durable but non-absorbent must be evident to all. The saving to the country were this stone adopted for public works, such as docks, bridges, &c. would be very considerable, as local materials could be used, and the enormous cost of granite and other hard stones be rendered unnecessary. The Indurated Stone is especially adapted for monumental purposes, vaults, catacombs, &c. and an average saving of from twenty-five to fifty per cent. will be effected by its adoption in lieu of the materials generally used. For sculpture and other works where considerable labour is expended, the advantage of this stone is pre-eminent, as the finest work can be executed in sandstone, and become subsequently indestructible except by violence. The stone will also bear a brilliant polish, thereby rendering it effectual for a variety of ornamental purposes.—Applications for Shares will be received to the 27th inst. at the Offices of the Company, 14 and 15, Saint Swithin's-lane, London, and Higher-street, Tunbridge Wells, where specimens may be seen and any information relative to the patent obtained; and by Messrs. PAGDEN and HODGKINSON, Solicitors, 71, Mark-lane, London.

COLOSSEUM, Regent's-Park.—Admission, 1s.—The original PANORAMA of LONDON by DAY, is exhibited daily, from Half-past Ten till Five. The extraordinary PANORAMA of LONDON by NIGHT, from Seven till Ten. Music from Two till Half-past Four, and during the evening.

CYCLORAMA, Albany-street.—Now Open, with a COLOSSAL MOVING DIORAMA of the CITY and BAY of NAPLES, MOUNT VESUVIUS, and POMPEII, exhibiting the Great Eruption of '79, and present state of the excavated City, painted by Mr. McNevin, from sketches taken by himself in 1852.—Daily at Three and Eight o'clock, with appropriate music and description. Admission, 1s. Children and Schools half-price.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely fungicious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase in weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs BLUNDELL SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 62, King William street City; FREDERICK BRABY, Wholesale and Retail Agent, 5, Tottenham-court, New-road. In Manchester and Liverpool by Messrs. LAWFORD and CO. of 40, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints and undertake painting ships, warehouses dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Timber-bush Dry OXIDES and PAINTS, in kegs of 14, 28, and 56 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole and the Isle of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 13, Manchester-buildings, Westminster

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their Painters, who will be ready to execute any description of Painting and Decorating with the Pure Patent White Zinc Paint.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses These well-known hard Stuccos dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for Internal Use, to be painted in a few hours and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that resumes no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantities, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. FARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lime, Lambs, Slates, and Silvr Slabs Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Parrs'ano.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of the valuable Cement that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in the price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon street, Westminster, at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharf, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Fish-street Hill, Fresh-wharf, or Middle Wharf, Scotland-yard, Westminster Manufacturer of Roman, Lias, and Mastic Cements, and English and French Plaster, &c

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all these qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the state pants put forth by those who have hitherto had the monopoly Manufactured by R. GREES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement: and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Hill, at the Upper Halfway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to fire-class decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

PORTLAND CEMENT.—D. MOUNTAGUE begs most respectfully to inform the numerous Architects, Contractors, Builders, &c who have for the last thirty years patronised his Roman Cement, Plaster, and other manufactures, that he is now enabled to supply them with a very superior Portland Cement, warranted to withstand the action of heat frost, &c and of uniform colour and quality. Orders received at Faleon Cement Wharf, 80, Bankside, Southwark; Harrow-bridge Wharf, Stratford, Essex; and at the Cement Manufactory, Orchard House, Blackwall.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster, who prepare one quality only of Portland Cement.

SOUTHAM'S BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.

O and T can deliver by their own boats, or by rail to any part of the kingdom

Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity in colour and quality.

Office, Warwick.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement The shell lime for mortar is burnt on an improved principle leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SEYSSELS, PAVIORS', STOCKS, and other BRICKS CHARLES RICHARDSON, 6, South Wharf, Paddington.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and CO send, free of expense, their pattern and price book, with designs, to any given spaces and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Maccles-field street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Jurors" report, page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H D earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Countine-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N B Light coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Red Seconds, Cutters, Paviors, Shippers, &c

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

BRICKS for OVEN-BUILDING, acknowledged the best for that purpose, delivered, 35s. to London-bridge or Newington; beyond that distance, moderate charges. Bricks of all description; yellow and light pickings, equal to seconds. Red facings, at 30s. in field; red and glazed pipes, about half the prices of stoneware; white sand, nearly silver, in field or by barge; Flanders' sand and loam; good coloured gravel. Address, B. PARKS, Lewisham Brickfields.

NINETY PER CENT. NET PROFITS.—A PATENT WHITE BRICK MANUFACTORY, with beds of Pottery clay and Stone and Cement, and Timber-sawing Machinery, &c.—TO BE LET the most compact and valuable Works in England, now in full operation; comprising all necessary machinery and plant and buildings for producing many millions annually of the most beautiful white facing bricks ever offered to the public. Required capital, from 3,000*l.* to 5,000*l.* The most unexceptional references required.—Apply to Mr. GEORGE SMITH, Land Agent, 3, Pulpot-lane, City, London.

BRICKS.—KENT GREY STOCKS on SALE. Also PATENT PERFORATED, and SOLID WHITE SUFFOLK FACINGS.—Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newington-cresent, Newington-butts, will, from MONDAY, the 11th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT. L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, beg to inform builders, contractors, and the building trade generally, that they have now on sale at the above wharf, Cowley stocks, grizzles, and place; white cutters, seconds and paviors; clinkers, red cutters, and stocks; plain and pan tiles, 6in. 9in. and 12 in.; white and red paving tiles; blue, red, and white ornamental tiles, blue and red ornamental ridges; Stourbridge, Welsh, and York-shire fire-bricks, lumps, tiles, and clay; ornamental and other wall copings; Bangor and other slates; stoneware sewer-pipes, bends, junctions, and syphons; closet-pans and traps, terra-cotta chimney-tops, trusses, brackets, vases, mouldings and paterns of the most improved patterns. Architects' designs worked to with accuracy and despatch. Lump and ground grey stone lime, chalk lime for plastering, blue lias lump and ground lime, Roman, Portland, and lias cements, coarse and fine plaster, laths and hair.

N.B.—Good Gothenburg laths are now on sale at the above wharf, price 32s. per load.

GREAT NORTHERN RAILWAY.—L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross beg to inform builders, contractors, and others who are engaged in works at or near any of the stations on the above line of railway, that they can be supplied upon the shortest notice with Bricks, Tiles, Lime, Cement, Sand, Plaster, Drain-pipes, Fire-goods, and all other building materials of the best quality at the lowest market prices.

N B Orders received overnight can be delivered by the early morning trains.

TO BRICKMAKERS, &c.

WANTED immediately, 100,000 deep red facing BRICKS, to be delivered in the Thames, alongside.—For particulars, apply to T. HARRISON, Esq. Cambridge-heath-wharf, Hackney.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE. TO CAPITALISTS AND BRICKMAKERS.

Messrs OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen (by order only in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

The great advantages possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be backed up in racks before leaving the machine, which is entirely self-acting, consequently requires only the labour of feeding and carrying off.

Applications, either to view the machine, or for the purchase of the patent right for counties, or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened. Wood by yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per large, in any quantity, alongside the Thames.

WANTED, TWO Strong-room DOORS. Address, with sizes, to Mr. GEORGE MORGAN, at his Offices, 5, Chancery lane.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

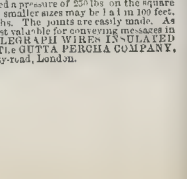
H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and shades.

H H H H	for drawing on wood.	F F	light and shading.
H H H	for architectural use.	F	for general use.
H H	for engineering.	B	black for shading.
H	for sketching.	B B	ditto ditto.
H B	hard and black for drawing.	B B B	ditto ditto.
M	medium.	B B B B	ditto ditto.

Sold by all the principal Stationers in town or country.

LADDERS, BARROWS, &c. for SALE or HIRE.—GEORGE ELL, 3, Tottenham-court, New-road, opposite the Hampstead road, and corner of Praed-street, Paddington, has on hand at all times a large stock of LADDERS, EXCAVATORS, BRICKMAKERS', and other BARROWS, PAINTERS' TRESTLES, MACHINES, STEPS, &c. Price lists can be had on application, at 1, Tottenham-court.



JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has hereto fore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

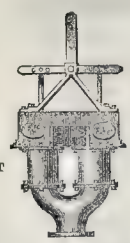
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers and hegged on a new system, which gives a superior tone and facility for ringing.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs on the square inch, with out bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

BENJAMIN FOWLER, WHITEFRIARS-STREET, FLEET-STREET,

REMOVED FROM 63, DORSET-STREET, FLEET-STREET.



FOWLER'S IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 11.15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

ON SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM

HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S IMPROVED WROUGHT IRON PUMPS,

FOR CONTRACTORS, BUILDERS, EXCAVATORS, and OTHERS.

A LARGE STOCK, from 3-inch to 9-inch Barrels, with Plain or Sliding Telescope Suction, always on hand.

This description of Pump Work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

B. FOWLER, WHITEFRIARS-STREET, **NOT DORSET-STREET,** as formerly.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

GENUINE SEYSSEL ASPHALTE,

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER

THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

ANCIENT HOUSE FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. CRACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Bauderkin.

CARPETS, plain or in rich Velvet pile, with appropriate Borders.

PAPER-HANGINGS of various kinds.

OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and appropriate Furniture

The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.

To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with its ancient character.

14, Wigmore-street, January, 1853.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, slurry, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

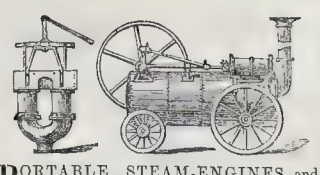
N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 36s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO BUILDERS AND PLUMBERS.

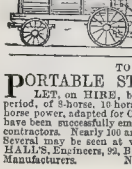
The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,



which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and excessive stirrings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising liquids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.



JOHN WARNER & SONS,
5, Crescent, Jewin-street, London,
Manufacturers and Patentees.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors. Nearly 100 are ready for delivery at a day's notice. Several may be seen at work; also at Messrs. MEDWIN and HALL'S, Engineers, 92, Blackfriars-road, Sole Patentees and only Manufacturers. N.B. Several for Sale.

ENGINEERING BUSINESS.—A Partner in a long-established and well-connected business in London, more particularly connected with warming and ventilation, is desirous to retire, and find a gentleman to fill his place. About £300 will be required.—Address, X. S. Messrs. Waterlow and Son's, 49, Parliament-street, London.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. Country Agents, and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

LANDSCAPE OIL-PAINTING TAUGHT by a Gentleman, the pupil of an eminent artist. Terms, at the artist's residence, for three lessons, 21s.; for twelve lessons, 63s. If at your own residence, for three lessons, 42s.; for twelve lessons, 105s.—Address, S. E. Effingham House, Homerton.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country, an extensive assortment of specimens and patterns commencing at 4s. per foot super, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSS' WHOLESALE WAREHOUSE, 29, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXPENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

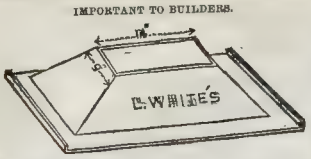
TO BUILDERS AND HOUSE DECORATORS.

THE LARGEST STOCK of Upholsterer's Cloths, Baizes, and Druggets, in every width, colour, and quality, is kept at HILL and SON'S, 28 and 29, St. Martin's-lane, Charing-cross. Patterns forwarded upon application.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

FORSTER and SLATE'S PATENT CONSTANT SUPPLY FILTERS, tested and approved by the first water engineers in the country. Used and approved at the Offices of the General Board of Health. Exclusively adopted by the Crystal Palace Company. Easily cleaned without trouble or expense.—To be seen in operation daily, at J. EVANS and SON'S, Ironmongers, 33, King William-street, London-bridge.

WILLIAM HARRIMAN and CO FIRE-BRICK and SANITARY TUBE WORKS, BLAYDON, NEWCASTLE-UPON-TYNE.



TO BUILDERS AND OTHERS.

FOR SALE, an excellent Town-made BUILDER'S CART, large size, 6-inch wheels, whole tires, patent arms, and side boards, complete.—For particulars, apply to Mr. KATTEE, Cambridge.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, have just ISSUED a PAMPHLET, descriptive of various Patented Inventions for the Permanent Way of Railways, which are adopted and are being applied to more than 3,000 miles of line. On application, a copy will be forwarded by post (gratis) to any parties who are interested in the construction of railways. WILLIAM HOWDEN, Sec.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 113, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

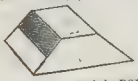
IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building.

Price from 8s. 6d. each, according to size.

IRON GIRDERS and COLUMNS to MODEL or DRAWING.

IRON PIPES and connections for gas, water, and liquid manure.



RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O G Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITES Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

CHIMNEY CONSTRUCTION.

MOON'S CHIMNEY CONTRACTOR, REGISTER, and CHIMNEY BAR COMBINED The contractor assists draught; the register admits of being partially or wholly closed; it is cleanly, simple in construction, and cannot get out of order.

Manufactured by PARRY, of 105, Golden-lane.

MOON'S DWARF-COVERED CHIMNEY-POTS, open on two sides, which affords an efficient outlet for the smoke, whilst the two enclosed sides and top form a guard from the wind. The pots being very distinct, prevent the flues affecting each other. The dwarf sits nearly conceals them from view, and thus avoids any disfigurement to the chimney-shafts.

Made by DOULTON, of Lambeth.

Specimens of the above are to be seen at the Architectural Exhibition, Suffolk-street, Pall-mall.

SMOKE NUISANCE ABOLITION.—TO BE SOLD, an INVENTION which will effect the CONSUMPTION of SMOKE in any open fire grate, at a cost of from three to ten shillings, without altering the external appearance of the stove Address, F. J UTTING, C.E. Wisbech

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WAIGNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

AGRICULTURAL LAND DRAIN-PIPES of all sizes, and in any quantities, may be obtained of L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, discens ng with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Old Fish-street, near St. Paul's, London.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and Co. Great Northern wharf, York-road, King's-cross.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers. White Fire Clay, Facing Bricks, &c. &c. Agents,—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1848.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c at the

NEAR POOLE, DORSET

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Plants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

THE AGENTS:—

IMPROVED WATER-CLOSET PANS AND TRAPS, WHITE INSIDE, 5s. 6d. EACH.

BY THE USE OF WHICH DRAINS MAY BE READILY EXAMINED, AND JUNCTIONS INSERTED, IN THE EVENT OF REQUIRING FURTHER CONNECTIONS.

INVERT BLOCKS of various radii, for Egg-shaped and Circular Sewers, extensively used by the Metropolitan and City Commission of Sewers, and are found to be well adapted to the purposes for which they are intended.

STRAIGHT TUBES IN TWO FEET LENGTHS.

IMPROVED YARD SINK.

In consequence of so many Closet Pans of an inferior quality having been introduced into the London market, I have thought it desirable to consider the propriety of lowering the Prices of those manufactured by me, not because they bear too much profit, but to supply an article in connection with Stoneware Drain Pipes of a durable character. It is found that Closet Pans not made of Stoneware are not durable, and in the space of a few months the glaze has peeled off the inside, and the Pan becomes rough, and absorbs a portion of what passes through it, thereby rendering it offensive to sight and smell.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 39, Bryanston-street, Covent Garden; and at EDWARD COCKS, 94, Wardour-street, Oxford-street. Drawings and List of Prices will be forwarded free, on application.

THE BUILDER.

SALES BY AUCTION.

TO BUILDERS, MASONS, STATUARIES, PAVIORS, AND OTHERS.—Remaining portion of the STONE and MARBLE STOCK of an old established firm, retiring from business.

MESSRS. EVERSFIELD and HORNE have received instructions from the proprietors to SELL by AUCTION on the premises, Wharf road, Maiden lane, King's cross, and at South row, New road, on TUESDAY, FEBRUARY 6th, and following day, in consequence of a dissolution in the partnership, the concluding portion of their valuable STOCK, comprising a large quantity of Yorkshire stone, in landings, paving, hearths, risers slabs, steps, sills, coping, sinks, and kerb; Portland stone, in 11-inch and 4-inch; several thousand feet of Sicilian and other marble slab, statuary, vein, Sienian, and other marble in blocks and mantling; a large variety of well manufactured chimney-pieces of every class, including some of the richest designs and elaborately sculptured; a collection of marble baths manufactured, ornamented figures in marble, and numerous other items remaining unsold from the previous sales. Approved bills will be taken in payment. May be viewed two days previous, and catalogues had on the Premises, and of the Auctioneers, 49, Parliament-street, Westminster, or Coal Exchange.

SOUTH SEA HOUSE ESTATE, THREADNEEDLE-STREET.

MESSRS. BEADEL and SONS are favoured with instructions to SUBMIT to PUBLIC COMPETITION, on TUESDAY, FEBRUARY 27th, at TWELVE, the above VALUABLE PROPERTY, having extensive frontage to Threadneedle-street, convenient sitting thence with old Broad-street, and covering a superficial area of nearly three-quarters of an acre. This very eligible property is, with a small exception, freehold, and in all and tax redeemed. It comprises the present South Sea House, a most substantially erected fabric, three valuable messuages, used as offices, the open areas surrounding the South Sea House, the whole of which will be offered in one lot; also a small building now occupied with the Flower Pot public-house, which will be sold separately. The property presents a rare opportunity for the acquisition of a compact freehold estate in the neighbourhood of the Bank of England, and, in its present state, will realize a handsome rental, but if judiciously re-arranged will probably realize an increased income in a few months, and the materials will find a ready sale to the various lessees.—Particulars, with lithographic plans attached, are now ready, and may be had on application to Messrs. Wontner, Sons, and Blake, Solicitors, at the South Sea House, Threadneedle-street; at the Mart, and of Messrs. Beadel and Sons, 25, Gresham-street.

An immense Sale of the whole of the Stock in Trade, Plant Machinery, and Tools, at the Iron Building and Roofing Works, at Spring-hill, near Birmingham; and also in Gas street and Berkley-street, in Birmingham; late in the occupation of Messrs. Porter, Brothers, and Stuart

MESSRS. LUDLOW and ROBINSON will SELL, by AUCTION, by order of the Trustees (to the estate) on MONDAY next, the 5th day of FEBRUARY, and seven following days (Saturday and Sunday excepted) and without the least reserve, the whole of the immense STOCK in TRADE and EFFECTS in the above extensive works. Order of sale at Springhill—

MONDAY, FEB. 5.—Roofing slates (about 14 tons).

TUESDAY, FEB. 6.—The contents of the upper smiths' shop, fourteen anvils, portable hearths, 12 tons of new iron, files, &c.

WEDNESDAY, FEB. 7.—The greater portion of the machinery, corrugating presses, lathes, punching and shearing machines, screw-cutting machines, lifting machines, shafting, circular sawing machines, dies, and about fifty tons of galvanized, corrugated, and black sheet iron.

THURSDAY, FEB. 8.—Large stock of iron (various), iron housse, engine boiler, 12 tons of ironwork for gun carriages, railway carriage parts, and other work, &c.

FRIDAY, FEB. 9.—The contents of the lower smiths' shop,—anvils, iron smiths' hearths, the contents of four dry, two cranes, 70 tons of pig iron, large stock of iron for various castings, bores, &c.

MONDAY, FEB. 12.—The fixtures, Milner's safe, weighing machines, paint-shop, all the patterns, cast steel, string, flat rollers, &c.

TUESDAY, FEB. 13.—Stock of timber, scaffold poles, &c.

At the Works, Gas street and Berkley street.

WEDNESDAY, FEB. 14. Fixtures, iron roof corrugating presses, steam-engine, boiler and shafting, galvanized tanks weighing-machines, about 70 tons of galvanized and corrugated iron, &c.

The sale to commence each day at half past TEN o'clock precisely. N.B. After a deposit of five per cent. in cash, has been paid, approved bills of four months will be taken from all purchasers of the stock only) whose purchases shall exceed the sum of £10 (ten pounds), each, may be had at the Manufactory, Spring-hill office, Manchester, at the offices of Messrs. Chisnall and Gatesworth, Auctioneers, Regent-street, London; or of Messrs. Lupton and Rowland, Surveyors and Valuers, No. 14, New-street, Birmingham, and will be remitted upon the enclosure of ten postage-stamps.

THREADNEEDLE-STREET, immediately contiguous to the Royal Exchange, Lloyd's Royal Lisclan go-buildings, the Bank of England, and the Stock Exchange

MESSRS. NORTON, HOGGART, and TRIST have received instructions from the proprietor, to offer for SALE, at the MART, on FRIDAY, FEBRUARY 16, at TWELVE, the very highly important and exceedingly valuable and substantial FREEHOLD PREMISES, situate at the corner of Threadneedle street, immediately opposite the Royal Exchange and Lloyd's, and contiguous to Royal Exchange Buildings, the Bank of England, the Stock-Exchange, and several of the principal insurance offices, a spot unsurpassed or equalled in value or importance, in the City of London. The building has been constructed under the superintendence of an eminent architect, and has been finished in the most substantial and perfect manner, having every possible reference to comfort and convenience. It consists of seven stories, including the basement, and while it can be adapted to one entire retail business, is so arranged as to be let off in separate occupations, with a water-closet on each floor. The entrance is from Threadneedle-street, and that portion next the Royal Exchange buildings is enclosed by iron railings, with a space in front which can never be built upon, thus giving light and air scarcely to be met with in the City of London. It would be most difficult to estimate the annual value of a property of this description, but there can be no question that whether as for one entire establishment, or for separate chambers, it is of unrivalled position, must always command enormously high rentals, and that it consequently presents an investment of the most important and of a peculiarly character. May be viewed and particulars had of E. Cutts, Esq. Solicitor, 37, Spital-square; of J. Shaw, Esq. Architect, Christ's Hospital; at the Mart; and of Messrs. Norton, Hoggart, and Trist, 62, Old Broad-street, Royal Exchange.

Building Materials of a Mansion, adjoining the Clapham Common Station, South-Western Railway.

MR. F. HALL has been favoured with instructions to SELL by AUCTION, on the PREMISES, Spencer-road, Wandsworth-common, on WEDNESDAY, FEBRUARY 7, and following day, at TWELVE, the valuable MATERIALS of SPENCER LODGE, comprising 250,000 excellent stock bricks, quantity of paving and other tiles, 2 cast-iron conservatories, mahogany sashes and frames, handsome internal and external doors, French casements, handsome marble chimney-pieces, slate cisterns, Scagliola columns, quantity of rafters, joists, flooring boards and battens, stoves, ranges, thirty square of paving stones, coping, landings and steps, verandahs and balconies, skirting, battens, laths, fireirons, and various other useful effects. May be viewed, and catalogues had on the Premises; and at the Auctioneer's, Chester street, Kennington.

TO TIMBER-MERCHANTS, BUILDERS, CARPENTERS, PIANOFORTE AND CABINET MAKERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, No. 43, Union-street, Somers-town, on MONDAY, FEBRUARY 12th, at ELEVEN for TWELVE, 2,500 Yellow, Pine, and Spruce PLANKS, DEALS, and BATTENS, 110 squares of prepared yellow and white boarding, 5,000 feet scantling, 3,000 feet wide pine board, thirty doors, dry cut stuff, fir joists, scaffold poles and boards, pulleys, ladders, bar rows, brushes, ironmongery, slate slabs, stone sills, dressers, 3 tons of old iron, &c.—May be viewed the Saturday prior, and catalogues had.—Auction Offices, Cardington-street, Hampstead-road.

SALES BY AUCTION.

JORDAN'S PATENT WOOD-CARVING WORKS.—Sale of the valuable Machinery.

MESSRS. OXENHAM and SONS beg to announce that the SALE of the valuable MACHINERY advertised by them for MONDAY, FEBRUARY 5th, WILL NOT TAKE PLACE FOR THE PRESENT.

Auction-rooms, 353, Oxford-street.

EASTBOURNE, SUSSEX.—Thirty-nine Building Agreements for 99 years, at separate reserved ground-rents, with the capital and substantial carcases of thirty-nine private residences and shops erected thereon.

MESSRS. FAREBROTHER, CLARK, and LYE will SELL, at the ANCHOR HOTEL, Eastbourne, on SATURDAY, FEBRUARY 17th, at ONE for TWO o'clock precisely, in thirteen lots, by direction of the Right Hon. the Earl of Burlington, THIRTY-NINE BUILDING AGREEMENTS for 99 years, at trifling reserved ground rents, for certain plots of land, desirably situated on the Grand Parade, Cavendish-street, and Victoria-place, in the most preferable part of that fashionable watering-place, Eastbourne, on the Sussex coast, with THIRTY-NINE substantial brick-built CARCASES erected thereon, in a forward state of completion, and upon which advances have and will be made by the vendor. The purchasers will have the advantage of converting their lots into freehold within seven years after the completion of the houses, by the redemption of the ground-rents at twenty years' purchase. The property may be viewed, and particulars had, on application to Mr. Berry, Surveyor, Eastbourne; particulars also at the Anchor Hotel; at the Ship, Brighton; Swan, Hastings; Star Hotel, Lewes; Worthing; Kentish Hotel, Tunbridge Wells; of Messrs. Simpson, 49, Saville-row, and Burlington-street, at Garraway's; and at the Offices of Messrs. Farebrother, Clark, and Lye, Lancaster-place, Strand.

TO IRONMONGERS, BUILDERS, AND OTHERS.—By MESSRS. TO ENGINEERS AND SURVEYORS.

TOWN SURVEYOR WANTED.—The West Hartlepool Improvement Commissioners are desirous to ENGAGE a qualified person to perform the joint duties of SURVEYOR and INSPECTOR of NUISANCES for the district of West Hartlepool, in the county of Durham. The person appointed will be required to give his entire services. Joint salary for the offices, 120*l.* per annum. Applications, stating age and qualifications, with testimonials to be sent to or delivered at my Office, not later than the 27th FEBRUARY instant, at noon.

By order,
WM. W. BRUNTON, Clerk to the Commissioners.
West Hartlepool, 7th February, 1855.

SOUTH WALES RAILWAY.—Notice is hereby given, that the next HALF-YEARLY ORDINARY MEETING of the Proprietors in this Company, will be held pursuant to the Act of Parliament, at the Great Western Royal Hotel, London, on TUESDAY, the 27th day of FEBRUARY instant, at ONE o'clock, for the election of FOUR DIRECTORS and ONE AUDITOR, in the place of the same number, who will retire by rotation, and for the general purposes of business.

And Notice is hereby also given, that it is intended at the same meeting to consider and determine the mode and conditions of raising the capital authorised to be created under the powers and provisions of the South Wales Railway (Amendment) Act, 1846, and the South Wales Railway (Pembroke &c.) Act, 1853.

And Notice is hereby also given, that the said meeting will be made special, for the purposes of taking into consideration, and, if thought fit, of approving a certain agreement proposed to be made between the South Wales Railway Company of the one part, and the Vale of Neath Railway Company of the other part, with reference to the passage of the traffic of the last-mentioned Company over the South Wales Railway between the Briton Ferry Dock and the South Wales Railway Company's station at Neath.

The Transfer Books will be closed on and after the 17th instant and will not be reopened until after the said Half-Yearly Ordinary Meeting, on the 27th instant.—The Chair will be taken at ONE o'clock precisely.—By order of the Board.

FRED. G. SAUNDERS, Secretary.
10, Eastbourne-terrace, Paddington, Feb. 5, 1855.

BURIAL CHAPELS, Lynn, Norfolk.—The Burial Board of St. Margaret, King's Lynn, have issued INSTRUCTIONS and CONDITIONS for the guidance of Architects desirous to furnish Plans and Drawings for Chapels and other Buildings, to be erected in the proposed New Burial Ground for that parish, which may be had on application to me, by letter prepaid. JOHN JAMES COULTON, Clerk to the Board.
Lynn, February 5, 1855.

COMPETITIONS.

TO SMITHS AND IRONMONGERS.

STAMFORD CEMETERY CHAPELS.—DESIGNS and ESTIMATES are required for WROUGHT-IRON ENTRANCE GATES to the above chapels, of mediæval design. The width between the stone piers being 12 feet, and the gates are to be 6 feet high. The weight to be specified, and the price to include carriage and fixing complete. Sealed Tenders to be sent to me on or before SATURDAY, the 17th inst.—By order of the Burial Board, JEREMIAH CLAPTON, Clerk.
Stamford, February 1, 1855.

CONTRACTS.

ORDNANCE CONTRACT.—To Builders.—Notice is hereby given, that TENDERS will be received by the Honourable Board of Ordnance, at their Office, Pall-mall, London, on MONDAY, the 12th FEBRUARY, 1855, from such persons as may be willing to UNDERTAKE PROVIDING and LAYING IN, such quantity of CONCRETE FOUNDATIONS as may be required for the Casings, &c. of the TEMPORARY WOODEN BUILDINGS, at ALDERSHOT HEATH, in the county of Hants. Separate Tenders will also be received, at the time and place above specified, for such Brickwork as may be required in connection with the above buildings. The plans may be seen at the Portsmouth Office. The specification, printed schedules of prices, and the conditions of contract, obtained on application at this Office, or at the Office at the Row-barge Inn, Aldershot Heath, between the hours of TEN and FOUR each day (Sunday excepted). The person or persons whose Tender shall be approved, will be required to provide eligible securities, and execute a bond for the due performance thereof, and to pay half the amount of the stamp on the bond.

Royal Engineer Office, Portsmouth, February 7, 1855.

Royal Engineer Office, Sheerness, Jan. 30, 1855.

CONTRACTS.—Notice is hereby given, that TENDERS will be received at the ORDNANCE OFFICE, PALL MALL, London, on or before TUESDAY, the 20th day of FEBRUARY, 1855, for the performance of the following branches of Artificers' Work, for the Ordnance Department in the SHEERNESS DISTRICT, for a period of three years from the 1st APRIL, 1855, determinable at any period after one year, on either party giving to the other three months' notice in writing, viz.:—

Sheerness, including the Islands of Sheppy and Grain.

Carpenters'	Work.
Bricklayers'	do.
Plasterers'	do.
Slaters'	do.
Masons'	do.
Paviors'	do.
Plumbers'	do.
Painters', Glaziers', and Paperhangers'	do.
Smiths'	do.

Separate Tenders are to be made for the different trades. Printed Forms and Schedules of Contract may be obtained on application at the Royal Engineer Office at Sheerness, until the 20th day of FEBRUARY next, Sundays excepted, and no Tender can be admitted after the said 20th day of FEBRUARY, 1855. The Board of Ordnance reserve to themselves the right of rejecting any or all Tenders that may be presented.

Royal Engineer Office, Portsmouth, 5th February, 1855.

TO BUILDERS.

NOTICE is hereby given, that TENDERS will be received by the Honourable Board of Ordnance, at their Office, Pall mall, London, on WEDNESDAY, the 14th day of FEBRUARY, 1855, from such persons as may be willing to undertake the several branches of ARTIFICERS' WORK, CAST IRON and METAL WORK, that may be required in the CONSTRUCTION of a REDOUBT, at Freshwater Gate, in the Isle of Wight. The plans may be seen, and the printed schedules of prices and conditions of the contract obtained, on application at this Office, between the hours of TEN and FOUR each day, Sundays excepted. The person whose Tender shall be approved, will be required to provide eligible securities, and execute a bond for the due performance thereof, and to pay half the amount of the stamp on the bond.

TO BUILDERS

NEW WAREHOUSES in MANCHESTER.—Parties desirous of CONTRACTING for the ERECTION of a PAIR of WAREHOUSES in Manchester, are requested to communicate with the Architects, from whom printed lists of the quantities may be procured. The Tenders are to be forwarded to the Architects on or before the 13 h of FEBRUARY. It is to be understood that the proprietors do not pledge themselves to accept the lowest Tender. For the information of contractors at a distance, the following particulars are given: The building will be seven stories, of 16 feet each in height; it will have a frontage of 100 yards, and two returns, of 30 yards each, entirely faced with stone. TRAVIS and MANGNALL, Architects.
3, Norfolk-street, Manchester, Jan. 22, 1855.

TO GASHOLDER-MAKERS AND IRONFOUNDERS.

THE DIRECTORS of the FAVERSHAM GASLIGHT and COKE COMPANY are desirous of receiving TENDERS for the ERECTION of NEW GASHOLDER, CAST-IRON TANK, GOVERNOR, &c. TO BUILDERS AND CONTRACTORS.

PERSONS desirous of TENDERING for the REBUILDING the TOWER, and RESEATING and RESTORING ARKESDEN PARISH CHURCH, near Newport, Essex, may see the plans and specifications at the Office of Mr G. E. PRITCHETT, Architect, Bush Fair, Stortford, and Tradesmen at the Rectory-house, from FEBRUARY 10th to MARCH 3, on which day the Tenders are to be delivered to the Architect. The Committee do not pledge themselves necessarily to accept the lowest Tender.

SAINT LEONARD, Shoreditch, Middlesex.—To IRONFOUNDERS, BUILDERS, SLATERS, and OTHERS.—The Trustees for Cleansing, Paving, &c. the Parish of Saint Leonard, Shoreditch, Middlesex, will meet in the VESTRY-ROOM of the Church on THURSDAY, the 15th day of FEBRUARY, 1855, at SIX o'clock in the evening, to receive PROPOSALS for the ERECTION and COMPLETION of TWO PUBLIC URINALS, one to be erected in the Highstreet, Hoxton, and one on the south side of Swan yard, Shore itch, near the terminus of the Eastern Counties Railway. Separate Tenders must be made for each urinal. The plans and specifications for such buildings may be seen, and any other information obtained, at the Office of the Architect, Mr. THOMAS E. KNIGHTLEY, 23, Cannon street, City. The Proposals for each must be separate for each building, must be delivered at the Office of the Clerk to the Trustees, 37, Hoxton-square, by FOUR o'clock in the afternoon of the day of meeting; and it will be necessary that some person should attend the meeting of the Trustees, in case of any explanation being required.—The Trustees do not bind themselves to accept the lowest or any other Tender. W. G. DAVIS, Clerk to the Trustees.
37, Hoxton-square, February 2, 1855.

CLITHEROE WATER-WORKS COMPANY. The Directors hereby give Notice, that they are prepared to receive TENDERS from competent persons for the following WORKS:—

1st.—The making a Service Reservoir.
2nd.—The laying about 8,000 yards of Earthenware Pipes.
3rd.—The laying about 12,000 yards of Iron Pipes, fixing Stopcocks, Hydrants, Sluice Valves, &c.

The Drawings and Specifications may be seen at our Office on and after the 13th instant; also at the Office of Mr. JOHN M'LAREN BOUGHEY, Civil Engineer, 24, Great George Street, Bradford, from whom forms of Tender, and any further information, may be obtained. Tenders must be delivered to the undersigned, in close sealed cover, addressed to the Chairman of the "Clitheroe Water-works Company," and endorsed "Tender for Works," on or before TWO o'clock, on TUESDAY, the 27th instant. The Directors do not bind themselves to accept the lowest or any Tender.

TRAPPLES and EASTHAM, Solicitors.
Clitheroe, 6th Feb. 1855.

TO BUILDERS.

NEW CHURCH at Isleworth, Middlesex.—Persons desirous of CONTRACTING for the ERECTION of the above CHURCH may see the plans, specification, and conditions, at the Committee-room of the National School, Isleworth-square, Isleworth, on or after MONDAY, FEBRUARY 12. The Wrenches are now used in the London factories of the kingdom, one substituting the place of twelve pairs of common tongs, and when in rather human power is necessary, any leverage can be attempted to them.—Manufactory, Bridge-foot, Vauxhall. Depôt, 158 Southwark-bridge road.

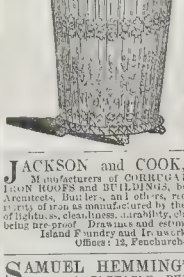
AN IRON DOOR to be DISPOSED OF. Dimensions, 6 feet 10 inches by 6 feet 3 inches.—For particulars apply to Mr BURKETT, 44, Queen-road, Bayswater

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT. The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful means of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street London.



HEATING by HOT WATER.—JOHN WEEKS and CO. King's road, Chelsea, call the attention of architects, &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one coil can be seen daily in full operation, heating building in addition to 100 feet in length, at the small expense per day in fuel and labour of 4s. 8d. This achievement in heating by hot water is unprecedented.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 26, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 273, High-street, London. Manufactory, Luton, Beds.

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for—the verdict of full approbation.—has just been obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, which is recommended for best, most perfect, economical, and complete apparatus for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, R. W. KENNARD and CO. 67, Upper Thames-street, London. Manufactory, Luton, Beds.

MAGNUS'S PATENT ENAMELLED SLATE CABINET FORMED FIRE-PLACE.—This is decidedly the most novel, elegant, economical, and comfortable fireplace that has ever been introduced. It is a perfect ornament to any room, and stands BEFORE the opening of the chimney, projecting into the room as a regular cabinet. It is composed of fire-stone and slate, and has fire-stone hearth and back. It may also be fitted up for gas instead of coal. By the economical, which also saves one half the heat from the coal was cast in the chimney, and by persons of taste who object to the stiff appearance of fancy-piece in ordinary use, the CABINET-FORMED FIRE-PLACE has only to be seen to ensure its adoption. Price from ten guineas upwards. Pimlico Slate Works, 21 and 49, Upper Belgrave-st., Pimlico

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Hall Passages, Warehouses, Shops, Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER

is the most powerful, salubrious, and economical Apparatus as yet invented for Warming Churches, Chapels, Schools, and Public Rooms, by means of Hot Air

Prospectuses and Estimates may be obtained on application to

SYLVESTER and CO. Engineers and Manufacturers of Heating Apparatus, 96 Great Russell-street, Bloomsbury.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, to the economy of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, ease of construction, and being fire-proof. Drawings and estimates furnished

Island Foundry and Ironworks, Millwall, London.

Offices: 12, Fenchurch-street, City.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, show-fronts, boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, &c. at SAMUEL HEMMING'S IRONMONGERY at PEEL and STEDALLS',

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 400 buildings, consisting of churches, private houses, hothouses, halls, and staircases, galleries, conservatories, forcing-houses &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application. COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford street.

POWERFUL CRUSHING-MILLS, or GRANITE and IRON EDGE RUNNERS, FOR SALE. Also THREE PAIRS of French and Colage HORIZONTAL STONES, a capital pair of 9-feet FRENCH STONES, in frame, a 14-horse STEAM-BOILER, one ton, and portable WEIGHING-MACHINE. Can be seen.—Apply to C. T. CHRISTIE, Millwright and Engineer, 19, Broad-street, Lambeth, and 113, Vauxhall walk.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 129, Shoreditch.
A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in Stock.

Improved Self acting Cottage Ranges, with Large Oven and Boiler,
30 32 34 36-inch.
28s. 30s. 32s. 34s.
Best Self-acting Ranges, with Oven and Back Boiler, Bright Wrought Bars

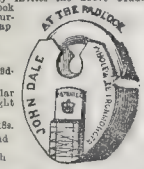
Cut Bilied Brads, 14s. 6d. per cwt
1 inch Cut Lath, 17s. Cast Lath, 13s.
Patent Line { 2 4½d. | 3 5d. | 4 7d. | 5 9d. | 6 1s. per knot.
4-inch Rd. Ward Mortice, with best Furniture and Patent Spindles, 3s. 6d. each Light Elliptic and Register Metal, 14s. per cwt.
Dr. Arnott's Ventilators, 4s. 6d. each.
An extensive stock of bar, rod, hoop, and sheet iron
Brick Moulds kept in stock. Any size made to order.



TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern book and price list, 10s.—55 and 56, High Holborn

---

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

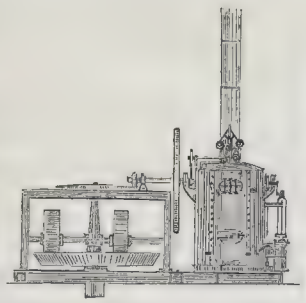
Elliptic Stoves, double backs,
9d. per inch, and upwards.
Register Stoves, 5id. 6d. 7d. 8d. and 9d. per inch.
Self acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—
3 ft., 3l. 13s.; 3 ft. 6 in., 3l. 8s.; 4 ft., 3l. 18s.
3-feet Cottage Ranges, with ovens and back boilers, 36s. each.
3-feet self-acting ditto, ditto, 56s. each
Air Bricks, 4s. per doz.
Best Town Glue, 56s. Ditto, Scotch, 60 per cwt.
Best Patent Sash Line.
1 2 3 4 5 6
4s. 6d. 5s. 6s. 7s 6d. 8s. 6d. 11s. per gross
And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

JAMES MICHIE, Engineer, &c. Battersea-park, Nine Elms, manufacturer of all kinds of STEAM ENGINES, portable and stationary; Sawing Machinery, Pumps, Cranes, Crabs &c.
N.B Several high pressure Steam-engines for Sale.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

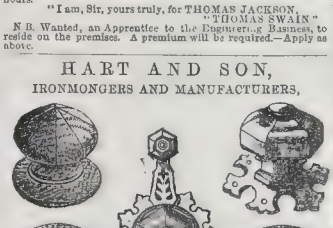
UNITING LEAD TO LEAD WITHOUT SOLDER.



Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for cranes, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c

---

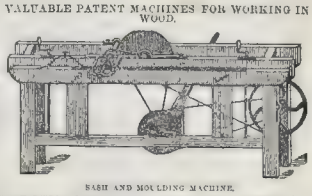


NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES.
a complete LIST of which
will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 1, Gresham-street, LONDON.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

A SAVING of TIME and MATERIALS, with Solidity of Building
HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 46, Albert-street, Manchester.
TESTIMONIAL.
"Thorn Island Battery Works, Milford Haven,
"Mr. Gough, "Jan. 13, 1855.
"Sir,—The three-horse power steam-engine purchased from you in 1853, for the purpose of hoisting stone and other material for the building of the above battery, has answered the purpose for which it was required remarkably well, and from its performance was found very convenient to remove from one part of the building to another. The consumption of coals was about 4 cwt. in 10 hours.
"I am, Sir, yours truly, for THOMAS JACKSON
"THOMAS SWAIN"
N.B. Wanted, an Apprentice to the Engineering Business, to reside on the premises. A premium will be required.—Apply as above.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,

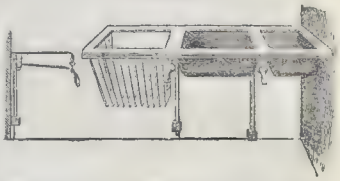


53, 54, & 55, WYCH-STREET, STRAND.
Illustrated Catalogues post-free on receipt of six postage-stamps.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire, Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Counter-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London

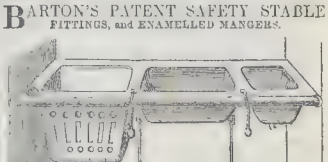
---

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.
136, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.



VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

SASH AND MOULDING MACHINE.



PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders: and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee for Lawton street, Liverpool, from whom full particulars may be obtained.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Wimpole-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH as ONE FIXTURE, they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety conduit to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's improved fixtures. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Wimpole-street, Oxford-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

The only Patented Invention of the description constructed so as to prevent considerable waste of Hay and Corn, together with all the newest improvements.
STABLE FITTINGS, FORTY SHILLINGS PER SET, to fill up the whole width of Stalls, and can be had enamelled or galvanized. Every description of Mangers, Racks, and Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c.
Manufacturer of Kite's Patent Noiseless Cast-iron Smoke-curing Cabinet Cats (Sworn Buckingham Palace), price 35s. each
JAMES BARTON, Ironfounder, &c. &c., Oxford-street, a few doors east of the Pantheon.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise

---

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air Bricks, &c J. JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality. Also cast-iron pipes for gas, water, or drainage; bends, tees, &c.; flange and hob-water pipes, with all the usual connections; lamp-posts and retorts, stable fittings, pig-troughs, &c &c
J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.
W. R. HARTLEY, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Rollers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace bars, Kilns, Pans, and other castings, to patterns or drawings.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's. JONES and BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Casting, Balconies, Wardrobe fronts, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Heps, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.
BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c always in stock.

FOUNDRY AND IRON WORKS,
62, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.
GLOVER, BROS.,
Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.
Patterns of Girders, Columns, Balconies, Railings, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, a light for internal work.
A large stock of Rain-water Pipes, Plain and G G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.
Plain and Ornamental Vases 20 per cent cheaper than Terra-cotta.
Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book safes an Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.
GLOVERS' IRONWORKS,
163, DRURY-LANE, and CHARLES-STREET.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.
The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. S. MORLEY and CO.; and by the Company's Original Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by Messrs. LAWFORD and CO., of 46, Norfolk street, Liverpool, who are also acknowledged Painters to the Company for Oxide Paints, and undertake painting, warehouse, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS in kegs of 14, 21, and 28 lbs. and upwards to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.
The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.
For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Panels, Stucco, &c. Marble Merchants and Importers of Portsdown.

PORTLAND CEMENT.—ASPDIN'S PATENT.
Messrs. ASPDIN, ORD, and CO have much pleasure in informing consumers of this valuable Cement that they have, by means of a recent discovery patented by Mr ASPDIN, much improved the quality of this Cement without any increase in price.
Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.
ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.
A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Cutcheon-town-Tyne; at Messrs. Robson's Wharfs, Holland street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.
PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not crack, vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are required. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq., at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cements, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, to 9 miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.
These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.
FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.
Dated St. Mary-street, Bridgewater, July 26th, 1854.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)
CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*
This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brandy, either in the dry state or ground in Oil.
Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innocuous qualities, is peculiarly applicable to Bridal-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.
PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO
MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

DAMP WALLS.
STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,
Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.
Prepared only by W. J. STENT, Warminster.
London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

SOUTHAM BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.
O. and T. can deliver by their own boats, or by rail to any part of the kingdom.
Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity in coil or and quality.
Office, Warwick.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not contain any adulterations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers; to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard success dry quickly, and can be painted upon within a few days. Made only by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. BILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shelly lime deposits is ground into an impalpable powder, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.
Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.
ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.
SCONSES, PAVIORS', STOCKS, and other BRICKS.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil-cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.
MAW and CO. send, free of expense, their pattern and price book, with designs, to any given spaces and estimates), free of expense.
BENTHALL WORKS, BROSELEY, SALOP.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Copings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c. Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin, from which the trade terms, viz. "Terro-Metallic," is the exclusive right of the Proprietor, and, thirdly, that the "Reports of the Jurors," page 591, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

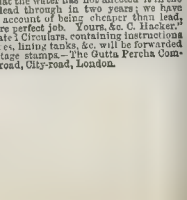
GREAT NORTHERN WHARF, York-road, King's cross. WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BRICKMAKERS and OTHERS.—TO BE SOLD, about 12,000 chaldrons of ASHES and BREEZE, of first-rate quality; can either be delivered or put on board on the Regent's Canal. For price and particulars, inquire of Mr. GEORGE TILLEY, St. George's-wharf, Agar-town, St. Pancras.—Feb. 7, 1855.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at R. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Countine-house, Hoxton Brickfields, Orange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS for OVEN-BUILDING, acknowledged the best for that purpose, delivered, 22s. to London-bridge or Newington; beyond that distance, moderate charge carted. Bricks of all description; yellow and light pickings, equal to seconds. Red facings, at 30s. in field; red and glazed pipes, about half the price of stoneware; white sand, nearly silver, in field or by barge; founders' sand and loam; good coloured gravel.—Address, B. PARKS, Lewisham Brickfields.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newington-crescent, Newington-butts, will, from MONDAY, the 11th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.



BRICK-MAKING EXTRAORDINARY!! BY OATES and INGRAM'S PATENT MACHINE.
TO CAPITALISTS AND BRICKMAKERS.
Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen, by order only in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.
The great advantages possessed by this machine over all others are, no tempering is required.
The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be stacked up to leave before leaving the machine, which is entirely self-acting, consequently requires only the labour of feeding and carrying off.
An invitation is offer to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, WELLS'S HOARD, Bromsgrove, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE OF THE FINEST QUALITY.
MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

TO BRICKMAKERS and OTHERS, requiring Mills for Washing.—TO BE DISPOSED OF, by PRIVATE CONTRACT, THREE capital TWO-HORSE WASH MILLS; the owner having erected Machinery for Washing, &c. by Steam.—No. 1. A very powerful mill, partially iron, with large iron wheel newly cogged, shafts, pinion, pump, rods, rising main, &c. to lift water from a well of 60 feet deep, with iron arrows, brickwork, &c. having been erected only two years.—No. 2. A very large superior-built mill, with iron arrows, and brickwork, &c. having been erected only two years.—No. 3. A mill, with wooden cogged wheel, pinion, rods, rising main, and pump, to lift water from a well of 60 feet deep, with iron arrows, brickwork, &c.—To be seen, and prices obtained, at JOHN E. LEE'S Brickfields and Lime Works, Lamnit-hill, Lewisham, Kent.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, true in form, and at less expense than heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and rigged on a new system, which gives a superior tone and facility for ringing.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have drawn our attention to the following letter received from Mr C Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1853.—In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker." N.B. The Company's Illustrated Circulars, containing instructions to plumbers for jointing tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

BUILDERS, &c. &c.—Take Notice of the extraordinary Reduction made in the price of marble work at the WESTMINSTER MARBLE FACTORY.—A Vein Marble Slab for Chimney-piece, only 20s. A good-sized Vein Marble Box Chimney-piece, with cane and bases on plinths fitted up in the best style, only 1l. 12s. Their patent machinery enables them to execute Marble Floor at 2s. 6d. per foot super. and every variety of Marble work at reduced prices. Their Show Rooms contain the largest Stock of Chimney-pieces in England.—Address, WESTMINSTER MARBLE COMPANY, EARL-STREET, BLACKFRIARS.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Barilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amiser Marble, for Boudoirs Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

MARBLE and STONE CHIMNEY-PIECES.—A SALE of the above will take place on TUESDAY, the 13th of MARCH, consisting of a great variety of statuary, Barilla, black, vein, and Sicilian marbles.—Catalogues, or any information, by post, one week previous to sale. A large portion of the stock is ready, and can be viewed at any time at HUSTLER'S Marble and Stone Sawing Mills, Cambridge-heath, Hackney.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents beg to inform the gentlemen connected with the Marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and Others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c cut on the shortest notice. Country orders promptly attended to.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

GRANITE, MONUMENTS, TOMBS, TABLETS, LEDGERS, LANDING STEPS, &c. polished or otherwise, as required. Granite blocks, ashlar, tramway, &c. Bramley Fall and other stone. Cargoes of the above stone supplied direct from the quarries. Goods landed and shipped.—Apply to Mr. G. H. CLARK, Stone Merchant and Granite Agent, Devon Haytor Wharf, Rotherhithe, London.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

BRAMLEY-FALL STONE and LARGE LANDINGS.—Mrs. ANN HUSLER can supply any quantity of BRAMLEY-FALL STONE, large landings, flags, steps, sills, copings, sinks &c. &c. at the lowest wholesale prices. Note. No charge made for supplying to dimensions.—Apply for price, &c. to S. TRICKETT, Stone Wharf, Isle of Dogs.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Nelt's Waterloo-bridge. Offices: 346, High-street, Southwark, near the Townhall

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

ANCASTER STONE, from the celebrated quarries of Mr John Wilson, Ancaster, who has appointed GATES and GEORGE, Stone Merchants, his sole consignees for the London district. Ancaster Stone, so generally esteemed by the building profession, for its great durability, economy, and general utility, as to require but a trial to secure the approval of architects and others for its more extended use in building.—Samples and other information can be obtained at the Great Northern Depôt, King's-cross; Caen-wharf, Rotherhithe; and Hibernia-chambers, London Bridge, Borough; or forwarded to address, free of charge.

GODSTONE STONE.—GATES and GEORGE beg to solicit the attention of architects, engineers, and builders to the above Stone, as being suitable for all purposes of construction, either as a substitute for brickwork, or in connection therewith, the price in most respects being about the same as ordinary brickwork. It can be obtained in large quantities, and to specified sizes, in rubble or rough square blocks, direct from the quarries. Information and samples given at Caen wharf, Rotherhithe, and Hibernia chambers, London-bridge, Borough.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Stores in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Dean-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained

TO SLATE MERCHANTS, SLATE and MARBLE MANUFACTURERS.—TO BE LET, and may be entered immediately, commodious YARD and BUILDINGS, situated on the sea shore, and in the vicinity of Bangor and Dinorwic slate quarries; within fifteen minutes' walk of a railway station. Any party wishing to meet with a suitable place to carry on slate and marble works, will find the premises most desirable. Apply by letter, addressed to Mr. EDWARD ELLIS, Ship-builder, &c. Bangor, North Wales.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set; with jambs, moulded with large ogee on outer edge, set on plinths. Mantel, moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 50l. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on-Tyne.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1855 are NOW READY, and can be had on application, inclosing a postage-stamp

N.B. A liberal discount to the trade.

UNDER HER MAJESTY'S ROYAL LETTERS PATENT.

INDURATED STONE COMPANY, for INDURATING and RENDERING IMPERVIOUS STONE, BRICKS, TILES, and other Building Materials. Completely Registered, Dec. 23rd, 1854. The Company are now in a position to execute orders for the sale and grant licenses for the use of their valuable patent. The great advantage to be derived from the use of a material not only durable but non-absorbent must be evident to all. The saving to the country were this stone adopted for public works such as docks, bridges, &c. would be very considerable, as local materials could be used, and the enormous cost of granite and other hard stones conveyed unnecessarily. The Indurated Stone is especially adapted for monumental purposes, vaults, cattle sills, &c. and an average saving of from twenty-five to fifty per cent. will be effected by the adoption in lieu of the materials generally used. For sculpture and other works where considerable labour is expended, the advantage of this stone is pre-eminent, as the finest work can be executed in sandstone, and become subsequently indestructible except by violence. The stone will also bear a brilliant polish, thereby rendering it effectual for a variety of ornamental purposes.—Applications for Shares will be received to the 27th inst. at the Offices of the Company, 14 and 15, Saint Swithin's-lane, London, and High-street, Tunbridge Wells, where specimens may be seen and any information relative to the patent obtained; and by Messrs. PAGDEN and HODGKINSON, Solicitors, 71, Mark-lane, London.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Pycad-street, Finsbury-square, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Courts. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, elaborate or simple, Gothic, Elizabethan, pendentive or flat, Louis XIV in much variety, and to any degree of cost, Italian and Greek, Renaissance, and many modified characters, execute l for the first houses and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-cases, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the trade of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames, tables, window cornices, screens, candelabrum, and the whole range of accompaniments to reception rooms of the first class, as well as in mediæval.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advanta'eous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

A HAND-BOOK for YOUNG PAINTERS.

By C. R. LESLIE, R.A. Author of the "Life of Constable."

JOHN MURRAY, Albemarle-street.

This Day will Woodcuts, 8vo. 7s. 6d.

HISTORICAL MEMORIALS of CANTERBURY. The Landing of Augustine—The Murder of Becket—Becket's Shrine—The Black Prince

By A. P. STANLEY, M.A., Canon of Canterbury.

JOHN MURRAY, Albemarle-street.

HANDBOOK TO CHURCH AND STATE.

This day, in 1 vol. 8vo. price 16s. cloth,

THE GREEK AND THE TURK, adapted to the Present Crisis.

By the Author of "Impressions of Greece."

JOHN MURRAY, Albemarle-street.

This day, in 1 vol. 8vo. with Maps and Plans, price 18s. cloth,

THE CAMPAIGN OF SEBASTOPOL.

By the Author of "Impressions of Greece."

JOHN MURRAY, Albemarle-street.

This day is published

The Builder.

ATURDAY, FEBRUARY 10, 1855.

IN a recent article—one of the series on the History of Architecture, commenced in conjunction with notices of the Courts at the Crystal Palace—we traced down e succession of styles to the advent of a new anner of ornamentation, chiefly practised in rance, though derived from Italy. In speaking the degenerate style, which is mainly exemified in the buildings of Borromini, and which d to the other, we had cited a class of works ot generally referred to when the history of the riod had been under consideration. We also luded to the modified effects of Italian precet upon the architecture of different counies. Some further comparison of the state of t in England and France during the seventh century, may contribute to the better mprehension of the subject,—more especially regards the character and results of the period Louis XIII. of France, and the long reign of e more celebrated monarch, his successor. ie higher qualities of art do not necessarily swer to the bidding of *patronage*, nor are they ways to be found where there may be a colossal ale of expenditure.

"Something there is more needful than expense."

A corresponding regard by the best archiects of France and England, for particular odels, did not result in identity of general yle. Though the same Cinque-cento element ay pervade the chief monumental works in ch case, the other circumstances controlling e general character of architecture were different.

It is within the power of individuals possessg the requisite art-qualifications, to exert great fluence upon the architecture of their own me. In the present day, we may complain of e difficulty of putting forth this influence,—t, how much of the existing taste for Gothic chitecture can now be traced to one man? nough, we think, to greatly serve the argument those who are of opinion, that any style of architure may be attributed to one such source of aching and exemplification. In the case of e seventeenth century, at least, it is clear, not ly that to Inigo Jones we owe the introducon of a new style into England, but that his xample and authority had much to do with the haracter of the noble works that followed ter. The Elizabethan literature and art, ceiving an Italian impress—directly, as well as rough the ordinary overland passage of style—ad, indeed, prepared the soil for the kindly ceptance of the plant. But the vigour of the ce of English architects is not the less to be garded as one of the chief causes of the high ndition of Italian architecture amongst us. Whether it was by the architects of this school, at the excessive deference to precedent, lately tributed to those of the present day, was duced,—or whether the positive reproduction the buildings of Italy, occasionally resorted , was to be defended—as it cannot be by us—e questions which might fairly be put. et it be admitted that the use made of Italian lodels did not manifest those qualities of art, nown by the Cinque-cento artists in *their* use ancient models: it is our main business here relate the history of architecture as we find , not to supply excuses for any system supposed weigh down the energy of our own time. The isthetics of art are now being gathered toger—in the effort to give to the feeling of the rtist, the assistance of the principles of a ience: the architect of former time had individual feeling and precedent alone. We should estimate the works of the seventeenth century—as we are told we should estimate all works—with reference to the circumstances of their day; and doing this, our comparative position will not be found what it should have been. It may be even, that the artistic feeling is the thing which we have not.

The real great defect in many of the works of the Anglo-Italians, was the forgetfulness of English habits and climate. Even in the plans of Jones, convenience was sacrificed often to an idea of internal effect,—but in the works of some architects the mistake is constant. Pope said that Lord Burlington had shown that,—

"Pompous buildings once were things of use,"

and asks whether the "imitating fools" should

"——— call the winds through long arcades to roar,
Proud to catch cold at a Venetian door,
Conscious they act a true Palladian part,
And, if they starve, they starve by rules of art."

Yet Burlington was by no means free from errors of a similar kind, and was himself satirized accordingly. His house at Chiswick—a beautiful work of art though it be—was "too small to live in, and too large to hang to one's watch," whilst of the house in Cork-street, Lord Chesterfield said:—"as General Wade could not live in it, he had better take a house opposite and look at it."

We say that these are questions which we have no present need to pursue to a decision. For the main point before us, the historic interest and the value and merit of the school, we might instance the production of an artist like Vanbrugh, though no one may have been more lampooned than he was. But we could find others also, who did not subordinate the exercise of inventive power to the forms of the admired example.

Inigo Jones may have been injured as an artist, by the very extent of his admiration for the works of another. But it is impossible to avoid noticing how continually *his* merits grow upon us by the better knowledge of his works, now gradually being arrived at. Few artists have been so unfortunate as regards the completion of their designs, or the permanence of their executed buildings. The common habit of ascribing the authorship of many uncertified works to this architect, is rather a traditionary piece of testimony to the importance of his position in the history of art, than a practice to be defended. Still, enough is now before the world, in which we can admire the inventive power, and the varied treatment, which were not wanting in the works of the great originator of Italian architecture in England. It must be recollected that Jones was the *first* of an illustrious line, but that he had the good sense to reject the vicious practice of his contemporaries in Italy, noticed in the last article. Walpole thought him "the greatest in his profession" "in these kingdoms," and says that Inigo Jones, "if a table of fame, like that in the 'Tatler,' were to be formed for men of great and indisputable genius in every country, would save England from the disgrace of not having her representative among the arts."

But though there may be the opportunity for the right man to exercise a visible influence; as opportunities and individual powers usually are, the authority is seldom absolute; or rather, circumstances are not always controlled by the exercise of qualities in the architect,—perhaps not the less required, though supplementary to taste and learning. In Jones's case, the circumstances were as we have seen favourable, and the fame of "a great traveller," which we find recorded on the occasion of his visit to Oxford, may have supplied the rest.

In France, though the architects individually were men of equal merit, it cannot be said that ony one of them had corresponding influence, or that there is a similar character of progression in the grand monumental works. M. Quatremère de Quincy himself remarks, that each architect pursued his own studies, without aiding in the formation of any permanent school. The kindly interchanges of a professional brotherhood, our art requires now, but which we recognise a growing desire to foster, and give the advantage of. Constant communication had all along been maintained with Italy; and, as we have seen even in the period before that we are noticing, Italian architects of the first order had been resident in France. The elegant Renaissance of Philibert de Lorme, and that exemplified in the old Louvre, by Lescot (and to which the nearest approach in England is in Mr. Hope's house in Piccadilly), had had contemporary with them the pure Italian architecture of Jean Bullant. The last-named architect, practising during the period 1540 to 1573, or not less than thirty years before our James I. began to reign, we have means of forming a comparative estimate. Holland House and Hatfield had not been built: Jones had not paid even his first visit to Italy. But when the Banqueting House, Whitehall, had been completed, in 1622, the old manner here had been resolutely abandoned, and the style founded on Italian models began its extended and permanent course. During the same period, the architecture of France, which we lately found so difficult to characterize, had neither held to the Renaissance of one architect, nor to the Cinque-cento style of the other. The influence of the individual upon art does not always originate with the architect, and thus, unfortunately, it is often to be referred as much to caprice or "little knowledge," as to result of æsthetic reasoning. With Mary de Medicis, the humour was to have something wherein she might be reminded of her native city, and what is called the "intermediate style" of De Brosse, was the consequence. Between the preceding styles and the rustic work of the Florentine palaces, the contrast formed was very great. It has been said, that similar work is not adapted to buildings with less extended parts than those at Florence: on the other hand, De Brosse was an architect of some merit, and had all the skill in grouping, which, indeed, was general with the architects of that time. But that regular progression of style which is by no means inconsistent with the exercise of invention, is, on the whole, the most favourable condition for the progress of *art*. It requires some time before any style can gain the hold on the public mind, which is essential to general art-production. The demand for particular *style*, is the expression from the public of their idea of the nearest standard of excellence which was within their reach: the life of the professor himself does not suffice for pursuing from the outset, inquiries into those principles which each style has endeavoured, and gone some way to solve; but again and again, in the history of the art, are we reminded that anything opposed to the calm, philosophical eduction of principles, only retards the progress,—in the same manner that opposing demands upon architects have been allowed to do in our own day.

In the Luxembourg palace by De Brosse, the high-pitched roofs, and the grouping of masses at the angles of buildings surrounding a court, and some of the other features of the best-known form of French domestic architecture, are very remarkable. De Brosse died about the year 1625, but his works influenced the style of many later buildings. After the death of Inigo Jones, in 1651, we have ample means of judging of characteristics of the French style, from specimens of it which are found in England.

Montague-house, the Old British Museum, of which illustrations appeared in some of the early volumes of the *Builder*, and which was originally erected in 1674, afforded an example

of the ordinary character of the style contemporary in France. Though Sir Christopher Wren adopted the manner to some extent, as in Chelsea Hospital—and, however pleasing it is in many of its main features—it is clearly an exotic and concurrent style with us, and not that which anywhere, conveys adequately the idea of palatial grandeur,—that which is so strikingly exhibited in the work of the same architect at Greenwich. And here we come to the chief point to which we have been endeavouring to draw the attention of our readers,—the diverse circumstances under which the Italian influence was exerted in the two countries.

The domestic architecture of a country, as we have heretofore remarked, should by no means be disregarded in the attempt to define the style at a particular epoch. The chief forms do not readily undergo change. The Gothic and castellated elements in England and France, may be observed in general forms long after the style as marked by decorative details, had become modified. In the latter country, from political causes, these elements were to be observed to a greater extent at the same date, than in the later Elizabethan, or Jacobean architecture. Thus it came to pass, that the French architects had to adopt the high-pitched roofs and the dormer windows of a much earlier style, and that the conical capped turrets crowned the *pavilions* of the angle and central masses. To these, later, Mansart added the curb-roof, otherwise known by his name, and the result was a style, in our opinion having some merit and esthetic value, but which is not that which would have been chosen for the architecture of Versailles, by an English architect, having regard to the magnificence which was contemplated. The exterior of the great work of Le Vau and Mansart shows a mass of mean buildings, and conveys no idea of the riches that are within. In England, however, the transition from the Jacobean was not only more easy, but there was less opportunity for prejudice against new forms.

In the seventeenth century, therefore, we find in *both* countries, an Italian style and a modern French style of architecture; but the style which was the rule in one country, was rather the exception in the other. The architects of both countries studied at the same school, yet the result was hardly what might have been expected. Indeed, it was not till a late date comparatively, that France possessed an architect of merit so far corresponding with those of England, as to make fair use of his advantages of position. That rank may, perhaps, be claimed for Le Mercier, the architect of the Church of the Sorbonne. This building was commenced in 1629, or soon after the death of De Brosse. The portico, which, if treated in the usual way, would be tetrastyle, has the angles each formed by a group of four columns. The pediment projects from a high-pitched truncated roof, which forms a good base for the dome. There is a clerestory with buttresses. With the relative positions of the main features, and some resemblance in the roofs, in this building and the centre of Chelsea Hospital, it is impossible to avoid supposing a certain community of feeling between the architects of the earlier and later buildings. But there is nothing in France of similar date which can be compared with Jones's portico to Old St. Paul's, commenced in the year 1633, the date to which we owe the statue of Charles I. at Charing-cross. In regard to sculpture, on the contrary, little can be claimed as the work of English artists. With the exception of Nicholas Stone, who executed the monument of Sir George Villiers and his wife, and that of the Countess of Buckingham, both in Westminster Abbey, the art in the reign of Charles I. and for many years afterwards, was in the hands of foreigners. The change which had come over the architecture of Italy about this time—the middle of the seventeenth century—was equally marked in art generally. The extravagances of Borromini are referable in a singular manner to the individual character of one, whose conception of art was crushed into the mere outdoing of a rival, and whose own hand at last terminated the more fearful, internal contest. But the cause lay deeper. The *toleration* of such caprices is to be explained only by the fact of a general change in the tone of thought, which took place throughout Europe. The pursuit of "the ideal" was no longer followed, and ancient models lost their *prestige*. In sculpture, mere imitative carving, or fanciful attitudes, were the great objects. Sir William Chambers, who wrote his treatise many years later, especially instances the statues by Bernini, on the colonnades of St. Peter's, with their twisted attitudes, and draperies blown by the wind, as especially unsuited to combination with architecture. In painting, landscape art was developed,—the best result of the tendency we have referred to. In interior decoration, the rules of perspective were more than ever called into use for the treatment of ceilings, and other unsuitable spaces, with the representations of architectural details. Pozzo, the Jesuit, and author of the book on Perspective, was one of the chief practitioners in this branch of art; but the inner dome of St. Paul's Cathedral furnishes a familiar instance.

In the next chapter of our comparative view of the architecture of England and France, the works of Sir Christopher Wren, and of his contemporary the great architect of France, will need especial examination.

THE BRITISH INSTITUTION.

Little can be said congratulatory of the majority of the works here appertaining to the historical or subject class. *Mediocre* would be a polite term to apply to them. Even the few that assert a claim to be looked at and admired, excepting one or two instances, emanate from those from whom more might be expected. Not many years ago the opening day of the British Institution used to be anticipated with a pleasure and excitement only second to that which awaited, and still awaits, happily with growing cause, the annual gathering by the Royal Academy. Then it was customary with our first painters to contribute. Maclise, Landseer, Collins, Etty, Stanfield, Roberts, Poole, Danby, Finnell, Martin, and other names of equal celebrity, were naturally looked for and found in the catalogue. Who now are their substitutes? Is it not extraordinary that amongst the half score of rising men, who year after year complain of neglect on the part of Royal Academy jurors (because they, having barely space for six pictures, are expected to award good positions to twelve, and fail *sometimes* in pleasing all), some do not avail themselves of this gallery to be seen to advantage? Whether they may have been deterred from exhibiting by instances of injustice on the part of former hanging committees, or whatever may be the cause, certain it is, they do not come here, and the value of the exhibition is not maintained.

(1), "Cow and Sheep," T. S. Cooper, A.R.A. is a favourable specimen of this well-known artist. (2), "An English Cottage Home," T. Creswick, R.A. is as true to nature as anything produced by him, and so pure in colour, as well as effect, that it considerably lessens one's admiration of photography. In (243), "The Park," which Mr. Ansdell has stocked with some beautifully drawn "deer," the landscape, by Creswick, appears small and confined. Nevertheless, it is a valuable picture, as a conjoint performance. Mr. R. Buckner's life-sized study of a "Shepherd of the Campagna di Roma" (19), is executed with that facility and breadth which usually distinguish him. In (257), the same qualities are apparent; but the appearance of the model scarcely realizes the quotation. Like Messrs. Creswick and Ansdell, F. R. Lee, R.A. and T. S. Cooper, A.R.A. still work in partnership. (24), "A Watering Place," testifies how agreeably. We always look for the little pearl of "A Sea Nymph," so regularly contributed by W. E. Frost, A.R.A. and are not disappointed (25), although she is more quaintly disposed than usual. (28), "St. Agnes," by W. Gale, lacks delicacy and spirituality; its earnest intention, nevertheless, recommends it to notice; but why should loveliness be deemed incompatible with intense expression? (407), "An Incursion of the Danes; Saxon women watching the Conflict," by the same, forcibly exemplifies the repulsiveness of ugliness; and though by no means deficient in most requirements of historic composition, is ruined by mannerism. (42), "A Study." J. Partridge charms by the beauty of the subject, and is well painted. (63), "Hear thou in Heaven thy Dwelling-place," by J. Sant, a female invested with devotional expression, is inferior to many of his former productions in drawing and power. This artist is singularly unequal. (64), "The Road to the Homestead," J. S. Raven, would have been improved, perhaps, by more reflected light in the foreground, but is still a very clever landscape. If "Mariana, in the Moated Grange," was at all like what she is here represented to be (68), the gentleman whose absence she deplores had some excuse for staying at home, and making her "aweary." (69), "Church and Convent of the Madonna del Lasso," G. E. Hering, is an agreeable picture, and evinces a determination of successfully carrying out an undertaking of considerable difficulty. (50), "A Doubtful Recognition," T. F. Dicksee, is something more than a pretty domestic picture: it is a natural conception, well composed, and firmly painted. (57), "Windsor Castle, Morning," H. Dawson, strikes the spectator at once, as being closely and faithfully studied from nature, and exhibiting knowledge, as well as observation of temporary effect, is likely to teach as much as please. (85), "A Welsh River, Evening," J. Dearle, a repetition almost of an admirable original of last year. We question if this be judicious, even when acknowledging its worth. (93), "A Stackyard in Kent," W. P. Fergusson, is remarkable for vigorous execution, freshness and truth, and promises well for the future. (113), "Cottage Interior," F. Goodall, A.R.A.; careful, unpretentious, and rather low in tone, contrasted with (130), "Interior of a Cottage near Stratford-on-Avon," T. Earl. (138), "The Interview between Queen Elizabeth and the Countess of Nottingham," T. M. Joy, which might have been the most important work in the Gallery, so few are the historical subjects, is, we are compelled to say, disagreeable, and a failure. (153), "A Sibyl," L. W. Desanges, is a misnomer for the pretty lady of whom this may be a fancy portrait. (161), "The Trophies of Youth," is the title affixed by Mr. Danby to a truly beautiful landscape, introducing a youth of more than ordinary proportions, carrying across a stream a child in possession of a bulrush! (175), "A Winter Afternoon," C. Branwhite, one of those snow-clad landscapes in which this artist delights; but somewhat too monotonous to convey an impression of its positive truth; howbeit, none can deny the dexterity with which it is manipulated. (191), "The Barmouth Water," North Wales, Sidney R. Percy, shows that feeling for largeness and masterly treatment of effect, combined with facile cleanness of touch, which place this and similar preceding landscapes emanating from the same source, far above the ordinary level, though sometimes, it is to be feared, at the sacrifice of other qualities which are equally essential to the construction of a first-rate work of art. (228), "A Border Spear," J. W. Glass, looks a veritable transcript of the individual often described by Sir Walter Scott, somewhat too lightly armed, perhaps, to do all the mischief he intends. The effect is highly poetical. (252), "Birk Crag, near Harrogate, Yorkshire," G. C. Stanfield, is truthful and beautiful, showing steady advance on former works. (278), "Pet Calves," W. Underhill, is an agreeably composed sketch, but too loosely painted to be considered as a matured subject picture. (295), "The Angel's Whisper," D. W. Deane, has the charm of colour to recommend it, and although to be regarded rather as a promise of something better hereafter, it has much in it that betokens the artist. This also applies to (470), "The Mother," which is preferable for sentiment. (307), "The Bird-Trap," G. Smith, is appreciable by any spectator. The notion has been still more successfully realised in (327), "Expectation," W. Hemsley. The distinctive characteristics of the Dutch school have been emulated by J. D. Wingfield in (316) "The Painter's Study," an interesting as well as a clever representation. We are glad to see Mr. Inskipp again, liking him pretty well as (76) "An Old Acquaintance," and better for his sketch of (343) "A Girl's Head." (348), "Giving the Dogs a Lift," J. W. Bottomley.

his scene in the Highlands, painted with honest dherence to nature, is excellent in its way. 349), "The Hot Breakfast," T. Earl, is a bit f true canine expression. (368). "A Hedge-ank in May," W. J. Webbe, a wonderfully ıtricate copy; the objects are seen as in the amera. (381), "Roses," Miss A. F. Mutrie. he art of depicting the evanescent beauty of oral creation should belong to the fair sex; it ould appear impossible to carry it further than here done. (418), "The Swoon of Endymion," . G. Naish, is too like Mr. Frost's "Sabrina," esides being flat and forced in colour; and (425), Evening on the Tagus," Frank Dillon, might ave been ascribed to Mr. Danby a dozen years go, were it not so much more like him than ature. (472), "The Wood-yard, Evening," Iark Anthony, is eccentric, but extremely true: ore earth and less sky would, perhaps, have nproved it as a composition. (522), "The eath of St. Oswald, Archbishop of York, anno 92, J. P. Burchett—the most ambitious ffort here presented: if wanting in some f the essential constituents for such de-gns, it has at least claims to high considera-on as a commendable attempt at achieving some-ing extraordinary, and for the partial success esulting. It is somewhat surprising that por-ons should be so good whilst others are ıadequate to sustain them. Its chief faults re want of expression and a certain general eaviness that makes the composition appear rowded, but there is much to praise. Mr. Lance as a gorgeous "Fruit" piece (168), introducing dead peacock, which few could have painted. Iessrs. Holland, J. Danby, A. W. Williams, . Williams, A. Gilbert, Boddington, Copley ielding, N. Jutsum, Middleton, and Wilson, ıstain their reputation, and Mr. Lear has Windsor Castle" (317), on such a scale as to limit of squirrels the size of life.

THE SCIENCE OF STATISTICS.

The science of statistics is of recent origin. lazard gives some running notes of its his-ry. Archenball, who was born at Elbing, in russia, in 1719, and died in 1772, was the rst who gave the name and a scientific form this branch of knowledge. His compend, riginally published in 1749, went through ven editions. His most distinguished pupil, chlossa, carried out his views still further, in e excellent, yet incomplete "Theory of atistics," printed at Gottingen, in 1804. In 807 appeared Newman's "Outlines of Statis-cs." In the systematic and compendious eatment of this subject, Fore, Remer, Mensel, orengel, Mannert, Fischer, and particularly assell, have especially distinguished them-lves. The last-named is the eminent geogra-ıer. In Italy, there are the well-known ımes of Balbi, Ludri, and Gioja. The first uropean Government that paid any attention the collection of statistics in a systematic anner, though this was on a limited scale, was weden.

About the middle of the last century a ecial commission was employed, who made nown at intervals of five years many interest-g facts in relation to the population of the untry, &c. Schlosser having called attention the important results of the Swedish com-ission, several other states soon entered into similar arrangement. There is now a statisti-l department, or what is termed a "bureau," connection with the Governments of Prussia. ustria, Bavaria, Wurtemberg, Naples, and rdinia. At the head of the bureau in erlin is a gentleman of great intelligence, . J. G. Hoffmann. In 1832 Lord Auck-nd and Mr. Poulett Thompson, who then esided over the Board of Trade, established statistical office in that department, in onnection with which the late Mr. G. R. Porter signally distinguished himself. Its business to collect, arrange, and publish statements lating to the condition and interests of the ritish empire. The volumes annually printed id laid before Parliament by this office are well nown and highly esteemed. In the year 1831 statistical society was formed in the kingdom Saxony, which has prosecuted its objects with reat energy and success. The French Society f Universal Statistics was founded on the 22nd November, 1829, under the protection of the king. It proposes and decrees prizes, grants medals, publishes a monthly collection of its transactions, and maintains a correspondence with learned bodies in all countries. The society numbers more than 1,500 members, French and foreign, who are classed into literary, honorary, and corresponding members. The subjects about which the society is employed are arranged into three classes: first, physical and descriptive statistics, embracing topography, hydrography, meteorology, geology, mineralogy, population, man considered physically, hygiene, and the sanitary state; secondly, positive and applied statistics, embracing vegetable and animal productions, agriculture, industry, commerce, navigation, state of the sciences, general construction, literature, languages, and the fine arts; thirdly, moral and philosophical statistics, including the forms of religious worship, legislature, and judicial power, public administration, finance, the military, marine, and diplomacy.

At the international statistical conference, which was held at Brussels on September 19th, 1853, under the presidency of Professor Quetelet, no less than twenty-six different countries were represented.

THE CHARTER-HOUSE.

Enshrined in the heart of London, as in a figurative sense it ought to be, this institution stands unrivalled for the princely munificence of its founder, a deodand for the education of youth, and the solace of old age in indigence. The living intent, and testamentary directions, of its truly great and pious originator have been carried out through troublous times and persecutions, and subsist to our day.

Occupying an area of 15 acres, enclosed between Goswell-street on the east, and John-street on the west, Wilderness-row on the north, and Charterhouse-square on the south, its position is identical with the consecrated grounds of Ralph Stratford, Bishop of London, who first purchased three acres, called "No Man's Land," for the sepulture of 50,000 victims of the plague, which A.D. 1349, nearly desolated London, and carried off nine-tenths of its inhabitants. On this plot was afterwards built the Pardon Chapel, from which the now existing thoroughfare took its name. Subsequently, Michael de Northburgh, who succeeded Dr. Stratford as Bishop of London, bequeathed 2,000*l.* (equal to 30,000*l.* of our money) to found thereon a convent for monks of the Carthusian order: he also *gave his leases and profits for four years*, with all his reversions, plate, library, &c. to the same object; and afterwards, Sir Walter de Manny, Knt. obtained from King Edward I. in the forty-fifth year of his reign (6th February, 1371), a royal license to found the Carthusian monastery. The attesting signatures to this charter, being the most distinguished men of the time, are John Hastings, Earl of Pembroke; Humfry de Bohun, Earl of Harford; Edmund Mortymer, Earl of March; William de Monacute (now Montagu); John de Barnes, Maior of London; and William de Walworthe (afterwards maior), the same who struck down Wat Tyler.

It appears also by a deed in the British Museum, that Sir Walter de Manny, Knt. purchased another plot of ground, called "Harvey Croft," lying without the bars of West Smithfield, containing ten and a half acres and thirty-six perches, which he devoted to the same purposes as the three acres: thus the site of the monastery and the present establishment are integral and identical: they were outside the city walls, and near unto Aldersgate, and having been increased from time to time, embrace several streets as well as Charterhouse-square.

Numerous gifts and bequests were made to the hospital during two centuries by the pious amongst kings, nobles, and commoners, until the treasures and possessions of the friary excited the cupidity of that reforming monarch Henry VIII. He sent his commissioners to visit the Charterhouse in 1534, when John Howghton, the prior, and Humfry Midylmore, the procurator, refused to take the oaths: they were both imprisoned in the Tower, and after a month's endurance, they, with several of the brethren, gave a certificate of conformity, and ultimately the whole monastery signed an avowal of adhesion to the royal supremacy as early as the 6th of June ensuing.

The compliance of Prior Howghton, however, availed him little, for he and two other monks were convicted of having *spoken too freely* of the king, and of his proceedings, and they were hanged, drawn, and quartered at Tyburn, 4th May, 1535: their heads were exhibited on the gates of the city, and a quarter of the body of Howghton set on the priory itself!

Finally, on the 10th May, 1537, William Traffurd, the prior, and the majority of brothers, took the oaths of renunciation and supremacy, and conveyed the monastery to the king by deed executed 10th June, 1537; the prior having secured a pension of 20*l.* a year, and the others of 5*l.* each, the income, thus devolving to the Crown, having been then estimated at 700*l.* per annum, exclusive of immense wealth in plate, chattels, &c.

A veil must be thrown over other acts of violence, persecution, imprisonment, and executions (all probably acts of policy), perpetrated in the name of the Christian religion. Thomas Bedyll, archdeacon of Cornwall, one of the king's commissioners, a tool of Cromwell, in his letter, 14th June, 1537, told that minister and pliant tool of the king, that the martyrs of the old Church were "despatched by the hand of God!"

Soon after the dissolution and sacking of the monastery, the site of it, together with Pardon Croft, was granted to Sir Edward North (the son of a mercer in London), who became Attorney-General to Henry VIII. In the reign of Queen Mary, Sir E. North's possession was confirmed, and he was created a baron. His son and successor, Roger Lord North, sold the property in the year 1565, to the Duke of Norfolk for 2,500*l.*

The duke was executed in the Tower, 1571, when his estates vested in the Crown; and Queen Elizabeth, in the thirty-fourth year of her reign, devised them to Thomas Goodwin: afterwards, however, the queen restored to the Norfolk family the forfeited estates, when the Charter-house fell to Lord Thomas Howard, the duke's second son.

The mansion and buildings of the estate had, during the occupation of the Duke of Norfolk and of Lord Thomas Howard, been enlarged and embellished, so that princely retinues might find accommodation within the precincts; and we find that Queen Elizabeth paid a visit (or rather visitation) of six days, accompanied by a numerous and imposing court; and that afterwards, on his entry into London, 7th May, 1603, King James I. tarried there, and on that occasion knighted eighty gentlemen.

Finally, the Charterhouse and its possessions were bought by the truly philanthropic Thomas Sutton, who, persevering through a long series of years in his purpose of dedicating his vast estates to charity, at length succeeded in getting a Charter of Incorporation from James I. June 22nd, 1611. He died December 12th, 1611, having previously left the whole of his possessions, save a few thousands (in comparatively small legacies to friends and kinsfolk), in trust, to be for ever *wholly distributed*, converted, and employed for the *maintenance of the hospital and free school*.

These estates were as follow, viz.:—

The manor and estate of Balsham, with Littlebury and Hadstock, purchased for 7,000*l.*; and Castle Camps, in Cambridgeshire, 10,800*l.*; in Essex—Southminster, 5,500*l.*; Hallingbury Bouchers, 2,633*l.* 6s. 8d.; Cold Norton, 4,000*l.*; and Stambridge, 1,966*l.* 13s. 4d. In Wilts—Salthrop, Blackgrove, and Chilton, 13,500*l.*; and the manor and estates of Elcombe, Wattlescote, Uffcotte, and Little Wigborow, 17,383*l.* 8s. 10d. In Lincoln—Dunsby, 2,133*l.* 6s. 8d.; and Buslingthorpe, 3,500*l.*; and in Middlesex, a messuage at Hackney, exclusive of which latter, and of the Charterhouse precincts, the foregoing amounted to the sum of 68,216*l.* 15s. 6d. Originally intending to found the charity on his estate of Hallingbury, in Essex, Mr. Sutton changed his purpose, and on May 9th, 1611, he purchased the site of the late dissolved Charterhouse, near Smithfield, for 13,000*l.* This will bring the outlay for purchase, at first cost, to 81,216*l.* 15s. 6d.—an amount commensurate

with a million at this time; but if the enormous increase in value of land be considered, to at least double the sum.

In addition to these estates the advowsons of Balsham, Castle Camps, Horsehead, Little Hallingbury, Dunsby, and of Southminster, are delegated for disposal on vacancy by the governors to scholars brought up at the hospital.

The yearly rental returned by these estates, exclusive of the Livings, was, in 1806, no more than 20,000*l.*! Most probably to guard against depreciation by letting farms on long leases, the trustees and governors are restricted by original wise precaution from leasing beyond twenty-one years; yet it is understood that the annual proceeds as returned of late, but very little exceed that sum!!

Leases about to lapse within a few years, on the City estates, will largely increase the rental, as in this crowded and valuable locality there are above 300 houses. The county estates must be always renewing and progressively increasing, but these, like all estates of private individuals, depend for productiveness on *good management*.

All these estates were left provisionally to the management of trustees, and particularly to his executors, whom in his last will the testator enjoins "as they shall answer to God, at the last day of judgment, to perform the trust according to my *true meaning* and *charitable intent*." It was provided by letters patent of King James, on formation of the establishment, that any increase in value of the rents and revenues of the hospital should be applied to the augmentation of the numbers, and of the allowances made to the poor brothers and scholars upon the foundation; and that "they *shall not be employed to any private use*."

Well did the *first* trustees and executors of Mr. Sutton carry out his intentions, for in the year 1630, there were eighty poor brothers, and forty scholars, together with a master and other officers upon the foundation. The *master* had then a stipend of 53*l.*; the *preacher*, 43*l.*; the *schoolmaster*, 33*l.*; and the poor brothers, 6*l.* 6s. 8d. each. At that period (and indeed long after), there were no extern scholars nor pupils, except those on the foundation.

As the governors, however, were persons of the first distinction, generally including the Sovereign, the Lord Chancellor, Chief Judges, and high nobility, the management, in course of time, devolved upon the officials, kings and statesmen having little time to spare for charitable endowments, saving only perhaps the disposal of the nominations and patronage. It is certain that whatever changes may have been made, or whatever money expended, on the foundation, little or nothing has been done for the structure or structures of these still monastic-looking piles. A truly solid and luxurious house was erected for the governor, fronting Charterhouse-square, about twenty years back. A large square of buildings has also been raised, not very discordant with the ancient edifice, and pretty much on the *almshouse scale*, for eighty poor brothers,—one wing to the latter being of somewhat a more imposing character; and a rather utilitarian building, of no order nor pretensions, has been raised for an *enlarged school*, in a plot of 8 acres, next Aldersgate-street, but with these exceptions improvements are stagnant. Still the respectable relics of the Howards, if in a state of decadence, are preserved in part; and the yet more venerable traces of Carthusian times are discernible in many places.

The grand hall of the Duke of Norfolk is complete, the galleries, staircases, and adjacent apartments retaining their wainscots and tapestry; but these remains little deserve the eulogies expended in records, which describe the apartments of Queen Elizabeth's temporary sojourn.

The present kitchen is part of the old Priory, and was most probably the banqueting-hall. The cloisters and surmounting terrace are obviously of the earliest date. Their wide arches, and four-arched cells for recluses, speak, from the stones, of mortification, penances, and prayers: now deserted (in vacation time), there needs but the lay figure of a solitary monk to realize a vision of past times, and (it is to be hoped) of obsolete prejudices.

The porter's lodge, the principle's house, and adjacent buildings, appear to be an incorporation of Carthusian remains, with the additions made by the Howards.

As for all the rest, there is neither order nor arrangement perceptible; and the boundary walls are as accident or prescription determined them. On one side (the left at entrance) runs a high brick wall of great antiquity: this merges into house and stable backs, and of the latter there is a long range, for no ostensible purpose. The brick wall to the north, having a few funeral tablets, is original: it runs the length of Wilderness-row to Goswell-street, and returns at right angles, in a continuous line, backing curtilages in that street, and embodying in its structure many othar stones that might tell tales of Carthusians.

Thus the buildings have been preserved and economy (in that respect) studied, if not carried out.

In one respect this institution is most peculiar—it has no entrance, at least none that deserves the name, unless access be made through the master's house!

The possibility of supervision by the governors of the charity may be best divined by looking at the list of those now in the trust, viz.:—Her Majesty the Queen, Prince Albert, Prince of Wales, Archbishop of Canterbury, Archbishop of York, Bishop of London, Duke of Buccleuch, Marquess of Lansdowne, Earl of Derby, Earl of Ripon, Earl Howe, Lord Lyndhurst, Lord J. Russell, Earl of Devon, Lord Panmure, Earl of Aberdeen, Lord Truro, and *the master*, Archdeacon Hale.

It is hard to imagine how Royalty can look into details of management—bishops incessantly engaged in spiritual duties—statesmen overborne with national and parliamentary avocations—judges of the land immersed in suits, plaints, and other manifold occupations—nobles *involved* in politics, and often not less so in mind and estate—and last of all, the master himself, a dignitary of the cathedral, and an incumbent with the care and charge of *many churches!* How can such bestow due care and requisite scrutiny into the estates, revenue, and management of so large an establishment? No; the care must be delegated, and if the management devolves upon the executive staff, there is no check.

Unrivalled in munificence, standing forth in bold relief amongst god-like benevolences, as the gift and origination of *one great mind*, the present state of the structure, and of its *management*, merits the record of description; and a short detail of the simple, unostentatious, yet distinguished career of the founder, may be hereafter permitted. Quondam.

IRON ROOF OF THE JOINT RAILWAY STATION, BIRMINGHAM.

INSTITUTION OF CIVIL ENGINEERS.

The paper read on the 30th ult. was "A Description of the Iron Roof, in one span, over the Joint Railway Station, New-street, Birmingham," by Mr. J. Phillips. The inconvenience to the traffic, arising from the columns supporting a series of small roofs, had long been felt, and the first step was the substitution of two parallel roofs over the up and down lines, as in most of the continental stations: when, however, the traffic increased to such an extraordinary extent as it had done, especially in some great terminal stations, or where a number of lines converged, further facilities became imperative, and single roofs covering the station in one span were adopted; that over the Lime-street station, at Liverpool, of 153 feet span, constructed by Mr. Turner, of Dublin, being an early and fine specimen.

In the New-street station, at Birmingham, upon a comparatively limited extent of ground, situated between the extremities of two tunnels, there was concentrated the traffic of five lines of railway; therefore it was essential to avoid any impediment to free circulation, and it was decided to cover the space by one roof of 840 feet long by 212 feet at its widest part, which was at one end; and by judicious management the various parts of each truss were reduced in such proportion that the tapering of the whole structure could scarcely be perceived.

The roof consisted of thirty-six curved principals of wrought iron, placed at intervals of 24½ feet, and the height of the chord-line was fixed at 33 feet from the level of the rails to the springing of the principals, which were attached to the pilasters forming part of the front of the hotel, whilst the other ends rested on iron columns, 2 feet diameter, and varying from 30 feet to 35 feet in height: these latter weighed about 5½ tons each: they rested on concrete bases, but were not bolted down, and they carried on their upper extremities a frame of wrought-iron rollers, to facilitate the motion of the outer foot of each truss, the inner foot being firmly fixed on a stone bed in the wall.

The average weight of each principal was 25 tons: they were built of wrought-iron plates 15 inches deep by $\frac{11}{16}$ inch thick, with angle-irons rivetted on each side of the upper and lower edges, so as to form flanches $12\frac{1}{16}$ inches in width and $\frac{3}{4}$ inch in thickness.

Each tie bar, which, when in its place, had a versed sine of 20 feet, was composed of round iron 4 inches diameter, in twelve pieces, meeting in screwed boxes at the foot of each of the struts, which were made of four angle-irons, bowed out at the centre of their height, and kept apart by hollow cast-iron straining pieces, bolted between the angle irons. The diagonal ties met also at the ends of the struts.

The purlins were of timber 5 inches square, trussed by a tenison tie-rod and straining piece, bolted to cast-iron shoes at both ends. They rested on the back of the rafters, butting against each other endwise, at intervals of 8 feet; and there were numerous wind ties 1½ inch diameter, springing from the foot of every other arch, and running diagonally to the other side of the roof.

The centre was composed of an elevated lanthorn, of glass on the top, and iron louvres at the sides, extending the entire length of the roof; and parallel on each side, to the same extent, was a skylight 54 feet deep, giving 128,000 square feet of glass, or nearly one-half the superficial area of the roof, the remainder being covered with galvanized sheet-iron corrugated.

Each end was terminated by a gable screen of wood, glazed, and suspended from the end truss: the glass throughout was fluted plate, about $\frac{1}{16}$ inch in thickness, rolled in pieces of 6 feet long by 16 inches wide, and about 115 tons were used.

The important parts of the roof were proved, before leaving the works of the constructors; one principal being loaded with a weight equal to 40 lbs. per superficial foot, exclusive of its own weight: the total load was 90 tons, under which the deflection was $3\frac{7}{8}$ inches,—the extension of the foot upon rollers being 2½ inches, and of the other foot ⅛ inch, and after the trial no permanent set could be detected. Other and more stringent tests showed the roof to be amply strong and stiff.

Details were given of the moveable scaffolding, raised on a stage, extending the entire width of the station, in such a manner that the traffic of the line could be carried on whilst the roof was in course of construction. The stages were moved onward as required, and the whole of the principals and other parts were raised and fixed by sheer legs, without the occurrence of any casualty.

The finishing of the last principal was completed on the anniversary of fixing the first column; the total weight of iron raised being 1,050 tons: the number of squares, measured on plan, was 1,705: the cost, including 320 squares of ridge and furrow roofing, of spans from 45 feet to 188 feet, was 32,274*l.* or 16*l.* per square: this expense could not, however, be received as for the present price of iron, the roof having been executed when materials and labour were much less costly.

The greatest amount of expansion that had been recorded was shown to be ·546 inch for upwards of 31 degrees of variation of temperature. The roof was constructed by Messrs. Fox, Henderson, and Co. under the direction of Mr. W. Baker, the engineer for the railway company; the designs for the roof being made by Mr. E. A. Cowper, and the moveable scaffolding designed by Mr. J. Phillips, who had charge of the general construction and fixing.

CONVERSAZIONE AT THE ARCHITECTURAL EXHIBITION.

NOTWITHSTANDING the severity of the weather on the night of Wednesday, the 31st ult., a night which must have led many to reflect on the fortitude and enduring courage exhibited in the Crimea, there was a strong muster of visitors, including many ladies, at the bidding of the committee who are managing the Architectural Exhibition. In addition to the drawings, &c. which form the permanent exhibition there were tables filled with sketches, models, and other works of art, so that those who went there determined to see everything, must have remained late if they achieved their object. Mr. Mocatta exhibited a very nice portfolio of landscapes, and the Rev. Mr. Petit, a pile of his peculiar sketches. Mr. Fergusson contributed a model to illustrate the Birs-i-Nimrúd, as made out by Col. Rawlinson, and mentioned in another part of our journal. The varied colouring of the seven stages externally is a most noticeable incident (if placed beyond doubt): the face of the upper story, it seems, was vitrified, and this has probably aided very materially in the preservation of the wonderful monument. The use of Bellamy's Graining Instruments was explained by the patentee. Messrs. Hart had set up a tasty stall of iron-work and fastenings; Mr. Lavers, specimens of quarry glazing; and Messrs. Bowden, a frame filled with their peculiar decorative glass, which had a sparkling effect. The solid Swiss Parqueterre deserves attention.

We must again call upon our readers, and all who are interested in architecture and building, to give their aid to the exhibition, in order that it may be repeated.

CHURCHES AND SCHOOLS.

Sherborne.—The new, or rather renovated, buildings in connection with the King's School, have been completed, and are now being occupied. These buildings owe their foundation to Lord Digby, who gave a range of ancient premises and some three or four acres of land to the school governors. The buildings were apparently remains of the old Abbey of Sherborne, and they have been adapted to the purposes of a modern school by Mr. Carpenter, architect. The external form of much of the old erections has been retained, and the additions dove-tailed and adapted so as to render the whole apparently homogeneous. The buildings may be described as consisting of a school-room, chapel, and studies. A ruinous old apartment adjoining the west end of the church, and evidently the refectory, has been converted into a school-room, 68 feet long and 19 feet wide, having desks for three masters and for about 180 scholars. This room is reached by a flight of stone steps, and beneath it are three large class-rooms. An old oak roof of the Perpendicular period, which was found in a dilapidated state, has been restored by the builder, Mr. Davis, without removal. The walls of the building were considerably out of perpendicular, and it was considered that, to make a good job of it, it would be necessary to take off the roof. The roof, however, was trussed up, and the walls were brought together with longitudinal screw-bolts (without the application of heat), and were stayed with flying buttresses. The whole is said to have thus been made perfectly secure. At right angles with the school-room is the chapel,—a lofty building, 58 feet long by 20 feet 6 inches. It has been fitted up in college style for about 180 scholars. The sacrarium is covered with Minton's encaustic tiles, and the aisle with plain red tiles. Both chapel and school-room are lighted by Mediæval brass standards, and warmed by hot water apparatus. The floor of the chapel is supported by groined arches, which form the cloisters. Through these, access is obtained to the studies, of which there are thirty-eight, arranged on two floors. The buildings have been erected by Mr. James Davis, of Frome, within a twelvemonth, at the cost of 5,000*l.* of which some 800*l.* have been raised by subscription.

Stratford-on-Avon.—St. James's Chapel of Ease, in connection with the parish church, was consecrated week before last by the Bishop of Worcester. It affords accommodation for 515 persons. The cost, including warming and lighting, but exclusive of tower, was about 1,900*l.* The architect is Mr. James Murray, of Coventry. The style is Early Decorated. The interior dimensions are about 90 feet long and 45 wide. The plan comprises nave, south aisle, aisle, north and south transepts, chancel, and south chancel aisle. The chapel is fitted up with open benches and (in the chancel) with stalls. The roofs are of open timber framing, which, together with other woodwork, is stained and varnished. The walls are built of Wilmcote limestone, with dressings and window tracery of Bath stone. The roofs are covered with tiles. The tower and spire, through want of funds, yet remain to be built. The whole of the works have been executed by Mr. Joseph Mills, of Stratford-on-Avon, who is also the contractor for the church in course of erection at Warwick, under the same architect. The lighting is by Messrs. Skidmore, of Coventry.

Middlewich.—The opening of the National Schools here took place on Monday in week before last. They form a conspicuous feature in the old town of Middlewich. The buildings are situated on the east side of Lewin-street, near the church of St. Michael. They consist of boys' and infants' schools on the ground floor, with girls' school and class-room on the upper floor. The boys' school is 62 feet 3 inches long, 20 feet wide, and 14 feet high to the wall plate. The infants' school is 26 feet by 22, and 14 feet high to wall plate. The joists of the girls' school and class-room above are dressed, chamfered, stained, and varnished on the under side, with plaster between, giving to the boys' and infants' schools ornamental ceilings. Large yards or play-grounds are attached for each sex, with suitable offices, lavatories, &c. The girls' school is 62 feet 3 inches long by 20 feet wide, and 11 feet high to wall plate of roof, and 27 feet to centre of roof, which is open to the room. The whole of the timbers are chamfered, stained, and varnished. The class-room adjoining is 30 feet 6 inches by 22 feet, and open roof, furnished same as girls' room. These two rooms are connected by means of two arched doorways, with movable doors, making a kind of nave and transept room, capable of accommodating from 500 to 600 persons. The schools are built to accommodate about 170 boys, 170 girls, and 60 infants, or a total of 400 children. There is a master's residence adjoining. The design of the school and residence is of the Decorated period of Gothic architecture. The front facing Lewin-street is built of brick, and white Runcorn stone dressings. The windows are filled in with ornamental tracery. An oriel window is placed in the principal gable of the girls' school. The doors have moulded labels running round them, finished with carved bosses of foliage and animals. The gables are perforated with trefoil lights of carved stone work, filled in with ornamental stained glass, executed by Mr. Davies, of Macclesfield, the gable copings finished with carved finials. The stone carving was executed by Mr. T. R. Williams, of Manchester, under the directions of the architect, Mr. Stevens, of Macclesfield. Mr. John Evans, also of Macclesfield, was the builder, who contracted for the works for 1,577*l.* which sum included all fittings for schools, class-rooms, and residence, complete for occupation.

Oakengates.—On Thursday before last, the new church at Oakengates, dedicated to the Holy Trinity, was consecrated by the Bishop of Lichfield. The district is formed out of adjoining parishes, chiefly Wombridge. The building fund was raised by subscription, the Church Building Society giving 500*l.* The site for the church and burial-ground was presented by Mr. St. John Chiverton Charlton, of Apsley Castle, who also gave 40*l.* towards a parsonage-house, which has yet to be built, and for which further subscriptions are required. The new edifice was designed by Mr. Harrison, architect to the Church Building Commissioners; and the contract has been executed by Messrs. Nevett, of Ironbridge, under the superintendence of Mr. E. Christian, the diocesan architect. The church is in the pointed Gothic style, and consists of nave, side aisles, and chancel. The walls are built with red brick, intermixed with layers of dark brick, and the dressings are of polished Greenhill stone. The east window is Gothic, and at the west end is a stone wheel window of large dimensions. There is a tower resting on arches, and supplied with one bell: it is approached from the vestry, which is 10 feet by 8 feet, situate at the north-east corner, and communicating both with the chancel and north side. The aisles are divided from the nave by arches formed of stone and brick, supported by columns of dressed stone. The roof is closed, supported by ornamental ribs and covered with blue and brindled tiles, and ornamental ridge tiles. The floor is paved with blue and red tiles, laid diagonally. The building is capable of accommodating nearly 600 persons. Stall-seats have been adopted: 128 sittings have been appropriated, and the rest are free.

Melton.—The churchwardens are now attending to the fabric of Melton church, in which two new windows, with their surrounding stone-work, have just been completed (by Mr. R. W. Johnson), and placed in position at the south-east corner.

East Retford.—The restoration of the church here is progressing, the seats having been erected, and the heating apparatus fixed under the stone flooring in the aisles, where large grates are laid, to let out the warm air gradually. Mr. Lee is the contractor, and Mr. G. G. Place, of Nottingham, the architect employed. The committee, it is said, have entered into another contract with Mr. Lee to extend the chancel and restore it, at an additional cost to his former contracts of 800*l.* It is expected that the edifice will be finally restored and ready for divine service about the middle of June.

PROVINCIAL NEWS.

Uxbridge.—A piece of ground has been purchased for a cemetery at Kingston-lane, in the parish of Hillingdon, nearly a mile from Uxbridge. The amount required for the purchase of the land, erection of buildings, and other requisities, it is supposed, will exceed 3,000*l.* Lord Palmerston has allowed till 1st April for the closing of the Uxbridge burial-ground, inspection of the plans of the burial board's surveyor, &c.

Aldershot.—The Board of Ordnance have completed contracts for the erection of temporary wooden buildings, on Aldershot-heath, for an encampment of 20,000 men. They are to be ready in March.

Brighton.—Referring to the increase of the town on the north, the *Brighton Gazette* remarks, that those who frequent that part of Brighton cannot fail to have observed how rapidly, within a comparatively short time, this locality has increased in buildings, assuming the dimensions of a small town. Terraces, streets, and villas have risen as it were by magic—whole acres of bricks and mortar taking the place of what were once green and luxuriant fields. Not the least unimportant of these extensive undertakings, it is added, is that called the Wellington Estate, to the right of the Lewes-road, and leading up an avenue of trees to the Race-hill. As a mark of confidence in those more immediately connected with carrying out the practical part of this scheme, a dinner was given to the surveyor (Mr. J. Martin), and a few friends on Wednesday week, at the Race-hill Inn.

Dover.—It is said that extensive barracks will shortly be erected on the Western heights here, capable of accommodating not less than 1,000 men.

Portsmouth.—During the past week, according to the *Hampshire Advertiser*, several men have been engaged placing a glass roof over the entrance to the Victoria pier.

Isle of Wight.—Besides extensive fortifications now being constructed at Sconce-point, to protect the Needles passage, the Board of Ordnance have resolved to construct a redoubt on the Freshwater Cliff, to protect Freshwater Bay. The board have given the contract for the construction of the redoubt to a local builder; Mr. George Wheeler, the surveyor of the West Cowes' Local Board of Health, having been selected as the only competitor from the Island.

Bradford (Wilts.)—The designs for a new cemetery, by Mr. T. Fuller, of Bath, architect,

have been adopted by the Local Burial Board. There were fifteen designs sent in.

Birmingham.—The town-council having resolved, from "the low state of the public funds" of this thriving but by no means public-spirited town, not to decorate the town-hall for the ensuing musical festival, Mr. Ingram, decorator, has proposed to decorate the hall by his enamelling process for the mere cost of outlay. He also proposes to introduce the "sun light" system of lighting from the ceiling.

Manchester.—A sub-committee of the town-council has been organized for the purpose of selecting a suitable site on which to erect a new town-hall. The accommodation afforded by the present building, as remarked by the local *Courier*, is quite inadequate to the growing wants of the city, and as there is little of architectural beauty to boast of, in comparison with Liverpool and other places, it is to be hoped that the contemplated building, when erected, will not only be of a sufficiently commodious description, but will also be an ornament and a credit to this first commercial city in the world.——The opening of the Cheetham Town-hall took place on Thursday week. It is situated at the corner of Knowsley-street, having a frontage of 40 yards to York-street, and of 50 yards to Knowsley-street. The building is of Italian character, two stories high, and faced with brick, with stone quoins and dressings to the windows. The front consists of a centre and one receding wing (it is intended at some future time to add a second), a stone door-piece with panelled pilasters and Doric iron posts, supporting carved consols and entablature, with folding-doors and ornamental fan-light over. On each side the door is one window, and two others in each wing. The upper story is divided from the lower by moulded string course, and has seven windows, the centre one being more ornamented than the others. The whole is surmounted with an ornamental carved entablature of the Doric and Corinthian styles combined. From the entrance-hall there is a stone staircase, which leads to the second story, the principal apartment on which is the large room for public meetings, &c. This room is 52 feet long by 29 feet wide, and is 24 feet high. It has an ornamental cornice, with centre flowers, and is lighted with five plate-glass windows, and fitted up with chandeliers. The building has been erected from designs by Mr. J. Bird, architect. The builder was Mr. R. Neill.

Gateshead.—After long delay, the ruins occasioned by the late terrific explosion in Gateshead are being removed under the direction of Dr. Richardson, who, as the contractor, has sublet the work.

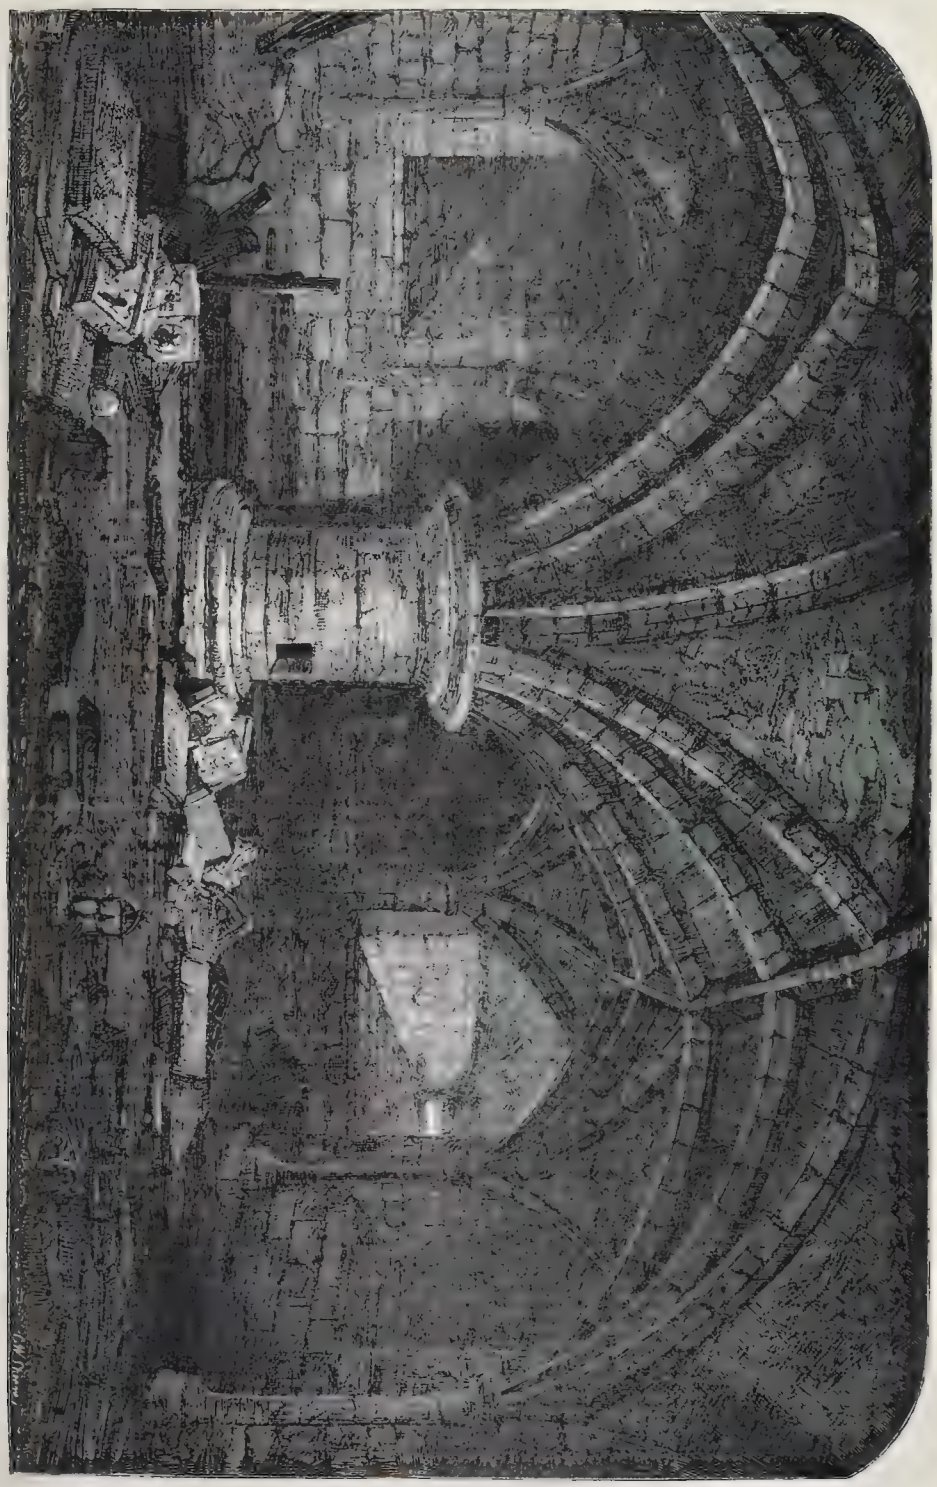
Edinburgh.—A washing-house is about to be erected in this city to accommodate 100 persons washing clothes in enclosed apartments, with an unlimited supply of hot and cold water, and the use of a bleaching-green. The charge for all these advantages will be, as usual in such establishments, very small,—one penny an hour, in fact, being the sole charge.

THE MOUNDS OF BABYLON.

AT a recent meeting of the Asiatic Society, a paper by Col. Rawlinson, on the great mound of Birs-i-Nimrúd, near Babylon, was read.

Every one has heard of the Birs-i-Nimrúd: it is an immense, shapeless mound, nearly 300 feet high, and, where it reaches the plain, from 200 to 400 feet in width,—apparently made up of crumbling rubbish, except the summit, which stands out like the fragment of a ruined tower.

The Colonel commences his memoir with a graphic account of the discovery of the purport of this vast mound,—a discovery sought for on a predetermined plan, without which it is probable that his attempt, like the many which have preceded it, would have been fruitless. After two months' excavation, the Colonel was summoned to the work by the information that a wall had been found, and laid bare to the length of nearly 190 feet; and that it turned off in right angles at each end, to be apparently carried all round the mound, forming a square of about 27 feet in height, surmounted by a platform. He immediately rode to the excavation, examined the spot, where he found the workmen quite discouraged and hopeless, having laboured long and found nothing. He was now, however, well aware of these facts, and at once pointed out the spot, near the corner, where the bricks should be removed. In half an hour a small hollow was found, from which he immediately directed the head workman to "bring out the commemorative cylinder,"—a command which, to the wonder and bewilderment of the people, was obeyed; and a cylinder, covered with inscriptions, was drawn out from its hiding-place of twenty-four centuries, as fresh as when deposited there by the hands, probably, of Nebuchadnezzar himself! The building was composed of a series of several rectangular platforms, one over the other, diminishing in size as they rose from the ground, each dedicated to one of the planets, and coloured externally with the colours attributed to the seven planets in the works of the Sabæan astrologers, and traditionally handed down from the Chaldeans. The translation of the inscriptions on the cylinders was read. It begins with the name and usual titles of Nebuchadnezzar, and proceeds with a summary of the buildings of Babylon which the king had repaired or erected. It then says that the "Temple of the Planets of the Seven Spheres," which had been built by an early king, 504 years previously (about 1100 B.C.), having become ruinous, owing to a neglect of the drainage, which allowed the rain to penetrate, and the sun-dried bricks causing the outer covering to bulge out, and fall down, the God Merodach had put it into his heart to restore it; that he did not, however, rebuild the platform, which was unimpaired, but that all the rest was restored by his commands.



CRYPT BELOW THE CHAPTER-HOUSE, WESTMINSTER-ABBEY.

ON former occasions we have given, in the *Builder*, engravings of several places of much architectural beauty and interest in London, which are hidden by gloom and other difficulties from the sight of the general wayfarer. Amongst these subterranean antiquities, but few contain remains of masonry as old as the Norman period. In the crypt of Bow Church there are some; also in that below Lamb's Chapel, near Cripplegate Church: there are also some Norman details in the now dark cloister of Bartholomew's the Great. Searching, however, the whole of London, both above and below ground, there is but little left to remind us of our Norman ancestors. It is desirable, therefore, that the greater care should be taken of what remains. The beautiful and perfect Norman chapel at the Tower has for long been comparatively inaccessible, and even when admission is with difficulty obtained to visit it, the fair proportions are so marred by the introduction of shelf above shelf, something similar to the arrangement for drying skins in a glue manufactory, that most persons at the sight feel pain and disappointment instead of pleasure. No doubt, however, before long, the valuable national records which crowd this chapel, will be removed to their appointed place, and then there will be nothing to prevent this famous antiquity from being open to all who may take the trouble to call.

There is, however, another example of Norman work which for many years has been not only closed to the public at large, but also to antiquaries and artists. We allude to that part of Westminster Abbey, called the Chapel of the Confessor by some of the historians of the Abbey, but which is part of the original Norman church, the circular groined roof of which is supported by massive columns, with capitals ornamented in various ways. The whole place is most picturesque. We have long wished to obtain access to this chapel. We believe, however, that the "*Pix*," or box, containing samples, &c. which are used at stated times to test the purity of the current coinage, is here hidden away, and preserved in safety. No one will deny that it is necessary to keep these matters in all their integrity, but it always has been urged as an excuse for refusing permission for any one to see this fine chapel, "that the 'Pix' was kept there." It seems a pity to use so beautiful a place only for the reception of matters which can be put into a small compass. Surely there are cellars and vaults at the disposal of the authorities equally safe, and yet not at all of general interest. A short time ago, the writer made a fresh attempt to obtain access to this carefully guarded and mysterious place, and inadvertently, in asking permission, spoke of the chapel as a crypt of Westminster Abbey: after some little trouble, a notice was received that the matter was possible, but that there was a difficulty in consequence of the Government not wishing the use of lights in the crypt, as it was so closely adjoining to the records with which the Chapter-house of the Abbey is filled. While greatly commending this precaution, it cannot but be recollected that close to the records contained in the White Tower, there is, or was not long ago, a magazine of gunpowder sufficiently large to blow not only the records of the nation but the tower itself to atoms; and we thought this infinitely more dangerous than the lantern of a painstaking antiquary. However, to let that pass, under the guidance of a gentleman connected with the Abbey, the writer progressed, full of curiosity, to inspect the long-hidden antiquity, our guide stopping at a low-arched door, close to the entrance to the Abbey, at Poet's Corner; and after trying some large and venerable-looking keys, succeeded in obtaining access to a dark, narrow passage. Into this we dived down sundry steps, groping along, and in parts knocking our heads against the top of the arches. The darkness soon became blacker than a "wolf's mouth" or the inmost depths of any coal-pit, or the centre of the Pyramids. Here another door intercepted further progress. Long did we grope in this substantial gloom before a key could be fitted: this being at length done, the door opened with a rusty, heavy, and grating sound; and after moving slowly down more steps and along twisted passages, a faint glimmering met the eye, and soon after we found ourselves not in the chapel desired, but in the ancient crypt shown in the engraving. Although at first somewhat disappointed, we could not fail being pleased to have penetrated, as it were by accident, into this little known and curious spot. So far as could be seen by the dim light, which only came in at one little window, the place seemed thickly strewed with withered leaves and fragments of olden architecture. However pleasing the effect might have been to Rembrandt had he visited this ancient crypt, he would have found it impossible to avail himself of his sketch-book. It was thereupon determined to allow us the privilege of a lantern; on returning with which, and once more opening the door, presenting at the same time a picture not without resemblance to the discovery of Guy Fawkes in former days at a place adjoining,—we, after descending as before, had better convenience for examining the interior. The crypt is octagonal, a massive pillar in the centre throwing groins of great strength to each compartment; the whole forming the support to the Chapter-house, which is immediately above. The centre column is very curious, being composed of four stones, two of which are solid and two carefully hollowed, like a piece of plane-tree, with the circular pith removed. On referring to the engraving it will be seen, that if a piece of stone were carefully fitted into the hole in the pillar, and also into that at the other side, few persons would imagine that this solid-looking column contained two recesses, or cupboards, which might have been found useful for the concealment of treasure and other important matters in troubled times. The crypt contains an altar, a piscina, and aumbry. The outer walls are of great thickness, and solid masonry. There were no indications, as is the case in many crypts, of iron rings for the suspension of lamps. It is a curious fragment of old London. Closing the door of the crypt, we looked, on reaching the outer air, with pity at the shattered exterior of the Chapter-house. To this, however, as well as its curious contents, we shall shortly have an opportunity of referring.

NOXIOUS TRADES.—The attention of the public in general, and of the Board of Health in particular, may well be directed to section 61 of Buildings Act, providing, as this section does, for the total *suppression* of an existing noxious trade. It sets forth that two-thirds of the inhabitants of any parish may at any time procure the removal of any noxious trade by *purchase* and compensation for same,—expense of so doing being levied as a rate on such parish or part of parish, or borne by the memorialists. — SALUS POPULI SUPREMA LEX.

OLD LONDON WALL.—A correspondent mentions that, in making the alterations for the Milton Club, in the City, they have come upon a part of the old London wall, which seems to have been also a part of a building.

THE CRYPT OF THE CHAPTER-HOUSE, WESTMINSTER.

THE ACHIEVEMENTS OF LABOUR AND THOUGHT.

In the course of a lecture delivered by the Rev. Newman Hall, in Exeter-hall, on Tuesday, January 30, to the Young Men's Association, on the dignity of labour, the following was one of the arguments adduced :—The Dignity of Labour—consider its achievements! Dismayed by no difficulty, shrinking from no exertion, exhausted by no struggle, ever eager for renewed efforts in its persevering promotion of human happiness,—"clamorous labour knocks, with its hundred hands, at the golden gate of the morning," obtaining each day, through succeeding centuries, fresh benefactions for the world. Labour clears the forest and drains the morass, and makes the wilderness rejoice and blossom as the rose. Labour drives the plough, and scatters the seed, and reaps the harvest, and grinds the corn, and converts it into bread, the staff of life. Labour, tending the pastures, and sweeping the waters as well as cultivating the soil, provides with daily sustenance the 900 millions of the family of man. Labour gathers the gossamer web of the caterpillar, the cotton from the field, and the fleece from the flock, and weaves it into raiment soft, and warm, and beautiful; the purple robe of the prince, and the grey gown of the peasant, being alike its handy work. Labour moulds the brick, and splits the slate, and quarries the stone, and shapes the column, and rears not only the humble cottage, but the gorgeous palace, and the tapering spire and the stately dome. Labour, diving deep into the solid earth, brings up its long-hidden stores of coal, to feed ten thousand furnaces, and in millions of habitations to defy the winter's cold. Labour explores the rich veins of deeply-buried rocks, extracting the gold, the silver, the copper, and the tin. Labour smelts the iron, and moulds it into a thousand shapes for use and ornament, from the massive pillar to the tiniest needle, from the ponderous anchor to the wire-gauze, from the mighty fly-wheel of the steam-engine to the polished purse-ring or the glittering bead. Labour hews down the gnarled oak, and shapes the timber and builds the ship, and guides it over the deep, plunging through the billows and wrestling with the tempest, to bear to our shores the produce of every clime. Labour brings us Indian rice and American cotton, African ivory, and Greenland oil; fruits from the sunny South, and furs from the frozen North; tea from the East, and sugar from the West; carrying in exchange to every land the products of British industry and British skill. Labour, by the universally spread ramifications of trade, distributes its own treasures from country to country, from city to city, from house to house, conveying to the doors of all the necessaries and luxuries of life, and by the steady pulsation of an untrammelled commerce, maintaining healthy life in the great social system. Labour, fusing the opaque particles of rock, produces transparent glass, which it moulds and polishes, and combines so wondrously that sight is restored to the blind, while worlds, before invisible from distance, are brought so near as to be weighed and measured with an unerring exactness; and atoms, which had escaped all detection from minuteness, reveal a world of wonder and beauty in themselves. Labour, possessing a secret far more important than the philosopher's stone, transmutes the most worthless substances into the most precious, and placing in the crucible of its potent alchemistry, the putrid refuse of the sea and land, extracts fragrant essences and healing medicines, and materials of priceless importance in the arts. Labour, laughing at difficulties, spans majestic rivers, carries viaducts over marshy swamps, suspends aërial bridges above deep ravines, pierces the solid mountain with its dark, undeviating tunnel, blasting rocks, and filling hollows, and while linking together with its iron but loving grasp all nations of the earth, verifying in a literal sense the ancient prophecy, "Every valley shall be exalted, and every mountain and hill shall be brought low." Labour draws forth its delicate iron thread, and stretching it from city to city, from province to province, through mountains, and beneath the sea, realises more than fancy ever fabled, while it constructs a chariot on which speech may outstrip the wind, compete with the lightning, and fly as rapidly as thought itself. Labour seizes the thoughts of genius—the discoveries of science—the counsels of experience—the admonitions of piety; and with its magic types impressing the vacant page, renders it pregnant with life and power, perpetuating truth to distant ages, and diffusing it to all mankind. Labour sits enthroned in palaces of crystal, whose high arched roofs proudly sparkle in the sunshine which delighteth to honour it, and whose ample courts are crowded with the trophies of its victories, in every country and in every age. Labour, a mighty magician, walks forth into a region uninhabited and waste: he looks earnestly on the scene, so quiet in its desolation; then waving his wonder-working wand, those dreary valleys smile with golden harvests,—those barren mountain slopes are clothed with foliage,—the furnace blazes—the anvil rings—the busy wheels whirl round—the town appears, the mart of commerce, the hall of science, the temple of religion, rear high their lofty fronts,—a forest of masts, gay with varied pennons, rises from the harbour,—the quays are crowded with commercial spoils, the peaceful spoils which enrich both him who receives and him who yields,—representatives of far-off regions make it their resort,—science enlists the elements of earth and heaven in its service,—art, awaking, clothes its strength with beauty,—literature new born, redoubles and perpetuates its praise,—civilization smiles—liberty is glad—humanity rejoices—piety exults, for the voice of industry and gladness is heard on every hand; and who, contemplating such results, will deny that there is Dignity in Labour?

SCENERY AND MUSIC.

The Adelphi Theatre.—Two of the scenes in the new drama here, called "Janet Pride," are particularly good, and do credit to Messrs. Pitt and Turner. One represents the Foundling Hospital at Paris on a winter night, the ground and every projecting ledge covered with snow; the other, a wild part of Australia—the Bush—wherein the stage is thrown into inequalities, covered with grass and foliage, that are carried on as far as the eye can reach by the scene behind. The weight of the drama, which is very effective—almost too exciting indeed—is most efficiently borne by Mr. Webster and Madame Celeste, Mr. Keeley lending a hand now and then to lighten the load. The Temperance Society could not desire a more forcible and frightful example of the abasement, crime, and misery produced by drink than is afforded by *Richard Pride*, as depicted by Mr. Webster: it is a masterly impersonation.

Popularization of Music.—The Amateur Musical Society commenced their ninth season on the 5th instant, at the Hanover-square Rooms very successfully. The overture to *Der Freischütz*, in particular, was remarkably well played. Some part-songs by the London *Deutscher Männer-chor* materially aided the success. They gave Lachner's *Standchen* admirably. Carrying out the principle of amateurship further than on previous occasions, Mr. Henry Leslie now acts as conductor. The expenses of the last season, we observe, met wholly by the subscriptions, amounted to the sum of 765*l.* 19*s.* 6*d.*

ILLUSTRATIONS AND PRINTS.

"THE Ladies of the Reformation," a book recently published by Messrs. Blackie, is remarkable for the profusion and excellence with which it is illustrated, containing, as it does, no fewer than 112 engravings on wood. The principal subjects are by Mr. James Godwin, and display, as it seems to us, great power of invention, skill in composition, and facility with the pencil. Some may see a reason why the praise of the *Builder* in this case may be somewhat partial: we will content ourselves, therefore, with the above brief commendation, and refer our readers to the work itself for our justification. We would especially point out the title-page; "The Burning of Anne Askew" (engraved by Dalziel), a picture in little; "Chaplain discoursing to Katharine Parr," very well cut by W. L. Thomas; "Lady Jane at the Place of Execution," and "Sir Anthony Cooke instructing his Daughters," both by the last-named engraver. Mr. J. W. Archer contributes a number of clever architectural illustrations, engraved by Bolton.

"The Seat of War in the East."—Under this title Messrs. Colnaghi and Co. have commenced the publication of a series of drawings made on the spot by Mr. William Simpson, who was commissioned by them to proceed to Sebastopol for the purpose of making sketches of the places and occurrences of interest arising from the war in the Crimea and the adjacent countries. The sketches are lithographed by Messrs. Day and Son, and include,—"The Cavalry Affair of the Heights of Bulganak, 19th Sept. 1854," "Balaklava, looking towards the Sea," "The Gale off the Port of Balaklava, showing Loss of the *Prince*," "The Light Cavalry Charge, 25th Oct. 1854," &c. It is evident from Mr. Simpson's letters, extracts from which have been circulated, that he is taking the best means for rendering the series truthful and important.

THE ILLUSTRATIONS OF "THE BUILDER" REVIEWED.

THE architectural writer in the *Critic* continues to give his monthly review of the buildings illustrated in our pages. We extract a portion of his latest remarks :—

"We give cordial welcome to every additional move indicating the advance of Anglo-Italian architecture; and the *Builder* (Vol. XII. p 571 presents us with a pleasing subject for remark in a woodcut representing the Offices of Messrs. Capel and Co. Throgmorton-street, from designs by Mr. J. J. Cole, architect. Mr. Cole will not understand us as finding any fault with his elevation, because we take it that he has done the best that was to be done with the arrangement that was required of him, and with his limits for operation. He has presented Throgmorton-street with, to say the least of it, a very pleasing elevation, in which the Barry influence is successfully submitted to, and in the basement of which there is a propriety of management, not deficient in originality. The corresponding squares of the two larger openings (the one a large entrance-way, and the other a window), and the uniform outline of the three oblong openings (the central a doorway, and the others windows), illustrate that regard for regularity which should ever, as much as possible, be considered. Had there been more frontage-space, the architect would, doubtless, have given more space between the end windows and the quoins of the building; but within his present limits this could not be done, since the fenestration could not with propriety have been in the least more close than it is. It occurs to us, however, that the mouldings of the rail of the balusters to the balconies of the second-floor windows might with advantage have been carried across the piers between them, as it would have corrected the somewhat vertical excess of the union formed by these windows and those of the first floor beneath. Let our readers just pencil the addition we suggest, and we think they will admit that a very trifling provision may greatly add to the value of an important whole. The editor of the *Builder* justly eulogises the 'little piece of design' apparent in a contrivance to light two rooms and form a back entrance, of which a separate illustration is given.

An elevation and plan of the New Houses and Schools at Fulham, by Messrs. F. and H. Francis, architects, are engraved in the same volume of the *Builder*, p. 583; and, looking at the mere geometrical presentment of the façade, in ignorance of what may be the effect of its return portions in perspective, we must admit it to evince taste and feeling. The pinnacles, however, at the angles of the tower are too meagre for their altitude, and especially for the broad bulk of the feature from which they rise; and the gables in the centre of the two return fronts, shown in profile as rising above the ridge of the main roof, are certainly injurious to the general composition. With the diamond cross line work on the surface of the walls we have no sympathy. It seems merely to argue a restless aversion to simplicity and repose. But there is much pleasing form and proportion in the front, *per se;* and buttresses are judiciously placed against the backs of the chimneys, where there is a superior height of masonry over walls weakened by flues.

In the *Builder*, Vol. XII. pp. 607 and 602, we have specimens of Old English, and of New French Gothic. The first is an engraving of the York Chapter House. If it were a new design, we should presume to say that the pinnacles want elevation, that the windows finish too close to the cornice, and that the omission of the circumscribing dripstones over their arches is to be lamented. Neither do we like the form and surface decoration of the masonry on the flying buttresses, the little monkey riders on the saddles of which should be assailed by pebbles, if pea-shooters should prove inefficient for their destruction. The French specimen is a mere bit; but it is a *morceau* of much beauty; only we wish the raking mouldings of the canopy had been carried lower. It

is one of the doorways of the new Church of St. Clotilde at Paris. The moulded work and decorations seem to exhibit true feeling; and the transome-piece and cinque-foil light above admirably employ the space which were otherwise unnecessary to the doorway, and would leave it with a too great proportional height.

The *Builder*, Vol. XII. p. 643, gives us a perspective representation of Mr. Tarring's *Design for the Government Offices*, in and near Downing-street, and which contemplates the removal of the buildings between the Horse Guards and Great George-street, Westminster, as far as Charles-street, and the block of houses between King and Parliament streets: the site of Dover House to form a public entrance into St. James's-park. The existing building, first erected by Soane, and since altered by Sir C. Barry, would form one wing of the façade towards Whitehall. To this would be added a large and loftier centre; and a corresponding wing would stretch northward, making frontages towards Whitehall and the park of about 700 feet; the return fronts being 400 feet long, and of exactly correspondent character with the others, though something subservient. The entire structure would comprise three courts, the leading new features of the design being the grand and lofty archways which would appear in the centres of the various ranges, viz. the two main longitudinal ones, and the four minor transverse ranges, east and west.

With the exception of the six grand archways, there is little invention as regards the architectural advancement of the design, nor do we say that much invention can be brought into play, or that it is required. The extension of Barry's existing portion is of course imperative; and the addition of the lofty centre blocks, in character precisely accordant, is all that is essential. But we think these crowning cubes might be rendered a little corrective of the excess of horizontality, by making six out of the eight engaged columns break a little forward, so as to warrant the upward termination of each block with a *pediment*, the roof-ridge being of course shown as extending from the outer front apex to that over the inner front. We shall be disappointed if Mr. Tarring do not acknowledge that this would be, not only practicable, but improving.

To the amount of sameness which would still remain, we see no objection. It would exhibit nothing more or less than a befitting unity in a vast pile of assimilating offices, admitting of no very peculiar or supreme compartment. The entire structure would look its use and purpose, as a great compound of board-rooms and offices for managers and clerks,—a multitudinous assemblage of units in uniform, regimentally continuous and compact, forming one vast quadrangular presentment, including three hollow squares, and exhibiting that abstract beauty of ornate regularity which is the charm of military parade."

GAS.

The first annual report of "the Crystal Palace District Gas Company" has been issued in a printed form. The directors give rather a curious account of the circumstances connected with the origin and establishment of this now seemingly thriving company. Its original "promoters," as many original promoters do, seem to have calculated on the lion's share of the loaves and fishes, but in this instance they appear to have miscalculated their ability to "work" the directors to their own ends so completely as they had desired. One of these promoters "became a director; was appointed engineer; and came forward as contractor for the proposed works." He did not seem much inclined, however, without considerable pressure and as much delay, to "come forward" with his "plans and specification, with the tender for the proposed works;" but at length he was obliged to do so. Even then, however, "the specification and drawings were found to be very incomplete." The amount of the tender had been "left blank," while the acceptance of the contract had been pressed upon the directors, who, however, "refused to accept" until the blank was "filled in," excusing themselves, doubtless, for what they hesitatingly feared was "a degree of caution amounting to distrust." The proposed works were estimated, at the instance of the directors, by respectable engineers, one of whom, Mr. Christie, declared 15,600*l.* to be their true value or cost, and another, Mr. Low, appears to have given a margin of a few odd thousands more; but what think our readers was the amount of the director-engineer-contractor's own estimate? Only 31,000*l.*! The proposed contract "forming part of the preliminary agreement of the company was immediately annulled;" and it was determined that tenders should be obtained from several sources for the building of gasworks suitable to the purposes of the company. Afterwards the two promoters, one of whom, as we have said, was a contracting-engineering director, while the other was the secretary-solicitor, made an application for 400 paid-up shares in the company, as compensation or remuneration for being the promoters of the company; and the directors appear to have been glad to get rid of both, which they ultimately did, by compounding with them for 300; the 200 devoted to the first promoter, however, being thereafter commuted by a money payment of 750*l.* for "promotion," and 640*l.* for personal services of self and son. The directors of this company already announce a dividend, for the second half-year of its existence, of 5 per cent. on the paid-up calls on their capital.——The Boston Gas Company, under threat of competition, have reduced their price from 5s. to 4s. with promise of "pure" gas and plenty of it.——The Lincoln company have also promised to reduce their price, from 5s. to 4s. "so soon as they have cleared off the debt created by improvements and extensions" for which they have entered into contracts. These promises are exciting desires and hopes of similar reductions at Brigg, where the present price is 7s. 6d. besides meter rent, and at Stamford, where a reduction *to* 5s. appears to be the acme of felicity.——The gas-works at Harwich have been completed, and the town lit up.——At Cradley, a gas-work has also been built, and the shops, &c. are being lighted with the gas.——The Stockport gas consumers complain that their gas company is supplying them with "wretched" gas at 5s. in consequence of allowing a Lancashire firm to withdraw from a contract entered into for the supply of cannel coal for the Stockport gas.——While we have our gas-pen in hand, we have ourselves a subject of complaint to urge with the Imperial Gas Company. Why is it that with the best local appliances in our small study here at Brompton, we can scarcely ever get a good light from them, except of a Sunday evening, when all the shops and public works are closed? We shall not attempt to reply to our own question, but we trust the company will look to it, and provide a remedy as the best response.

WAR APPLIANCES.

Mr. Nasmyth is engaged at Patricroft in manufacturing a monster wrought-iron gun, to send a huge shot four or five miles; and Mr. Whitworth is employed in constructing improved rifles, to make them more efficacious and more certain instruments of destruction. The French Government are preparing crews and marines for four of the bomb-proof iron floating batteries, but there is a strange silence on this side the Channel, as to our own progress with these hopeful engines of war. Where are they? or what progress has been made with them? Why should France be a-head of us with such peace-compellers as these? A dreadful incubus appears to have been squatted on the vitals of the nation, paralyzing or neutralizing its truly gigantic, but most unavailing efforts. May we now be assured that the nation is at length awake,—that it will rise like a giant, from a horrid dreaming palsy, to the realization and the effectual exercise of the power it has already so well struggled to exert? Can we confide in the energy and the goodwill of its new executive head, whoever he be? May we rest assured that he will sweep away those cobweb threads of a pitiful Lilliputian routine, presided over by those who, at all events, would not break through them, and by the mere multiplication of which this powerful nation has been bound hand and foot, and left to exhaust itself in unavailing efforts? Let us hope for the best. If the energy of a Palmerston be exerted with a will, the way will be found to a speedy remedy for all our grievances. Meantime, we may remark, that although the Baltic is still spoken of as the sole destination of the powerful batteries of which we were speaking, their utility in the Euxine is so obvious that we cannot believe this fact has been overlooked, or that there is no intention of assisting the allied armies with them at Sebastopol. We have confidence in the sincerity and the right-goodwill of the emperor who is preparing them; and knowing too how he keeps his own counsel, we are confident of his intention to astonish Prince Menschikoff shortly, by sea as well as by land. Indeed, until the north fortifications, no less than the south, be effectually destroyed, how are the allied armies to occupy Sebastopol even when they take it, as probably they could, any day, even as it is? Are they not quietly awaiting the construction and the advent of these very batteries, loaded with Nasmyth's monster guns?——There is no lack of other "new and destructive war engines;" and, doubtless, amongst a host of humbugs, there are a few fearful instruments in preparation. The last new invention we have heard of, is one (or rather two) alluded to by the *Northampton Chronicle*, a correspondent of which "expresses his wish to call the serious attention of his countrymen to two most destructive engines of war, which he has invented and has submitted to the Honourable Board of Ordnance. He describes one as capable of throwing, with the aid of from 80 to 100 men, one ton of 84-pounders, at one discharge, and of being discharged once every minute, striking with precision any spot desired. [Here would be something like the concentration we complained of the want of.] He also states that by another invention of his, requiring sixty-four men to work it, sixteen bombshells, at one discharge, may be fired off every minute, with equal effect; his battery being itself bomb-proof. He intends, if the foregoing are adopted, also bringing out two other plans, one to throw from thirty to sixty tons of red-hot shot per hour; the other to throw from 1,000 to 100,000 grape-shot per minute in the field, for protection and defence of foot and horse soldiers." He who really can and will bring some such engines first into the field of war will be the world's peacemaker. ——Satisfactory experiments with Roberts's mortar and with mortar vessels adapted to its use, have, it appears, been made at Sheerness. A large flotilla of these vessels, both English and French, is said to be in process of construction; and Mr. Nasmyth has applied, it seems, to the Government for permission to mount his huge malleable guns on the same principle. It has recently come to the knowledge of the Admiralty that during Captain Roberts's former fitting of this mortar at Portsmouth, a certain Russian admiral (who has since died within the harbour of Sebastopol) was at Portsmouth, and, shortly after his return home, the Russian line-of-battle ship, the *Twelve Apostles*, was fitted by him, and our trenches have felt the weight of their 13-inch shell. Even without any such hints the Russians are at least as active as ourselves, however much less inventive. Indeed, the most exaggerated-looking statements as to the activity of their doings are now being made. Thus, the *Austrian Military Gazette* states, as intelligence from Tula, that that whole town is converted into a manufactory of fire-arms, and that in December last 600,000 stand of arms were forwarded thence to the grand arsenal at Kieff, while still the Government orders more. The director of the Tula manufactory is said to be of Scottish origin. There are, or were, 4,000 workmen under his orders. Now, even though twelve months were allowed for the formation of 600,000 stand of arms, the daily average must have been about 1,650! The Tula manufactory, it is said, never used to turn out more than 300 a day, including the mere conversion of flint into percussion-locked guns. That immense exertions, and numerous working recruits, from Germany and elsewhere, have been made during the past year, however, there is no doubt. The powder-mills at Ochta are reported to have provided the Russian army with upwards of 1,000,000 cwt. of powder within the year.

KENTISH RAG-STONE.

Your correspondent, Mr. C. H. Smith, in his notice (published in a previous number, p. 58) on rag-stone, is in error in terming the strata of lower green sand at Tilberstow-hill, as the "bottom beds" of that formation,—they being the *upper* ferruginous concretionary beds of the lower sand.

The true Kentish-rag only occurs in the lower series, and rests on the Atherfield clay, which clay lies immediately upon the Wealden.

A familiar example of the distinction in position between these beds are the cliffs from Folkstone to Hythe. Tilberstow is identical with the concretionary beds of Folkstone,—the rock at Hythe, to the Kentish-rag beds in Mid-Kent, and which are largely developed at Maidstone. The rag here contains nearly 92 per cent. of carbonate of lime, is highly crystalline, and contains no "quartzose grains of sand." These beds thin out westward from Maidstone, and are not I believe) developed in the neighbourhood of Tilberstow.

At Maidstone, the thickness of the rag-stone beds is upwards of 80 feet, alternating with hassock, and a few layers of chert, or silex. An equivalent to the Tilberstow beds is found about three miles from Maidstone, on the road to Chatham, where the ferruginous beds rise from beneath the galt, at an angle of about 45 degrees; the constituent parts being very nearly similar to your correspondent's description of the strata at Tilberstow-hill.

W. H. Benstead.

Glazed Bricks.—The remarkable frost of Saturday morning succeeding a shower of rain presented a very beautiful appearance on the fronts of the houses, and gave them a brilliancy rarely witnessed. I think it suggests the idea for a mode of decoration, by glazing the surface of bricks, which has been but little attempted. The polished appearance given to common brickwork by the glossy surface would not be the only advantage, as it would also be more easily cleaned: the manufacture is not difficult, and the additional cost would be very trifling.—A. J. B.

BUILDERS' CHARGE FOR PREPARATION OF TENDERS.

Ritchie v. *Meadows*.—This was an action in the Bloomsbury County Court, wherein the plaintiff was foreman to Mr. Matthews, a builder. A few months ago the defendant wished to make alterations in his house, and instructed the plaintiff, amongst others, to prepare an estimate of the cost. The plaintiff, accordingly, in his leisure hours prepared the estimate. Among the estimates forwarded to the defendant for perusal was the plaintiff's, and one from Mr. Matthews, his (plaintiff's) employer, and this latter was accepted by the defendant. Mr. Matthews performed his contract, and received the amount, 240*l*. While the work was progressing, the plaintiff, as Mr. Matthews's foreman, superintended the work in the ordinary way. After the work had been completed, he sent his charges for preparing *his* estimate, amounting to three guineas; and, failing to obtain payment, brought this action. The plaintiff admitted that he had also prepared the estimate sent in by his master.

For the defendant it was sought to be shown that the agreement to pay for the preparation of the estimate was only in the event of the estimate not being accepted by the defendant; and he always looked upon the estimate of the plaintiff and Mr. Matthews as identical.

His Honour (Heath) said the agreement to pay for the estimate was with the plaintiff personally, and not as the foreman of Mr. Matthews. He should therefore make an order for payment of 2*l*. as he thought the amount charged (3*l*. 3s.) excessive. Verdict accordingly.

Notices of Books.

VARIORUM.

A PAPER on "Land Drainage and Drainage Systems," read by Mr. J. Bailey Denton before the London Central Farmers' Club, has been published in a separate form (by Ridgway, Piccadilly). The points mainly considered are, Depth of drains—Distance between drains—Arrangement of system—and Direction of drains. He considers the superiority of deep drains (say 4 feet) incontestably proved; but that extra depth will not compensate for too great distance between the drains. The mixed system of deep and shallow drains he considers simply one of expediency, and that it cannot be recognised as worthy to supersede an adequately and uniformly deep one. Mr. Denton gives 5*l*. per acre as the price at which he is now getting 4 feet drainage (25 feet intervals) done in some few places, and at which, in 1851, it was done pretty generally throughout the country.——The new number of the *Art-Journal* opens with an article on Design as applied to Ladies' Work, which may have the effect of making some of our fair friends *think*—over their wool. The writer gives some account of the new-old accomplishment *Potichomanie* with which *beaux* as well as *belles* are "stickying" their hands. Flowers, scrolls, and figures cut out of paper or linen are gummed on the face, and placed on the inside of thin glass vases. When the figures are dry, a coat of varnish is applied; then a coat of oil paint; and ultimately another coat of varnish. "The effect, *where the pattern is well arranged*, is good, and the glazed surface of the vase with the opaque colour within forms a good imitation of china." Unluckily, however, the pattern is *not* always well arranged, nor are the colours well chosen: in fact, more than half the specimens we have seen are simply abominable: and if there were public inspectors for the prevention of outrages on the *taste* of her Majesty's subjects (which ought to be protected as well as the person), would certainly be broken. The same journal contains some pertinent remarks on "Architectural Criticism in connection with the Architectural Exhibition."——The *Civil Engineers' Journal* contains the plans of the Trinity College Museums, Dublin; the exterior of which are illustrated some time ago, at the cost of a certain amount of angry correspondence.——The *British Workman*, a new penny illustrated periodical, is commenced "with an earnest desire to promote the health, wealth, and happiness of the working classes," and has the good word of Lord Shaftesbury. The first number is mainly directed against the dram-shop and the beer-house. "About 1,100,000*l*. sterling are *weekly* squandered in intoxicating drink and tobacco by the working classes of the United Kingdom!" This is a frightful fact; but how much *more* frightful would it be if the sum of all the poverty, ignorance, illness, misery, and crime caused by this profligate expenditure were added! The new periodical, if it wish to obtain the ear of those it seeks to benefit, must be less a lecturer.

Miscellanea.

CLIFFE NATIONAL SCHOOLS.—These schools (which were noticed in the *Builder* some time since) have been lately opened. They are built entirely on the plan at present approved by the Committee of Council on Education, which has contributed largely towards its building fund. The area of the principal room is 50 feet by 16 feet, with open timber-roof 23 feet from floor to ridge. There is besides a class-room, and two porches. The school-room is fitted with five groups of desks, and the class-room with a gallery. The exterior of the building is of Kentish rag-stone, slated. The builder is Mr. John Osmer, jun. of Cliffe, and the whole undertaking reflects credit on him. The plans were furnished by the committee of council, but Mr. Osmer drew them out in detail, &c.; and in many other ways his gratuitous services were useful to the promoters of the school. The principal contributors to the school, which cost nearly 500*l*. were—Committee of Council on Education, 200*l*.; National Society, 30*l*.; Gravesend Church Union, 10*l*.; and the remaining 260*l*. from private sources,—Lord Darnley and Archdeacon Croft, being the principal contributors. The farmers, besides their donations, carted the materials. The site, which is close to the church and village-green, was given by Mr. Peale, of Maidstone.

ASSOCIATION TO PREVENT BOILER EXPLOSIONS.—A meeting was held some time ago in the Town-hall, Manchester, to consider the necessity of adopting measures for the inspection of steam boilers (a suggestion which we had long urged in the *Builder*). At the meeting alluded to, the labours of the committee appointed have resulted in the formation of a series of rules and regulations; and as about 270 gentlemen or firms have become members of the association, a meeting was held on Tuesday week, in the same place, for the purpose of approving, or otherwise, of the rules which had been prepared. The mayor of Manchester presided, and there were present about 60 gentlemen employing steam-power. Mr. W. Fairbairn read the report, from which it appeared that the total number of persons canvassed amounted to 635. Of these 271 signed, twenty-seven refused, and the remainder, for various reasons, deferred giving their names until the association was permanently established.

ROYAL SCOTTISH ACADEMY.—The twenty-eighth annual report of the Council of this Academy has just been issued in a printed form. The appropriation of the new Art Galleries to the uses provided by the Act, is looked forward to as an important epoch in the history of the Academy, on the progress of which during the past year the members are congratulated. The Council report that the opening of the evening exhibitions, at reduced rates of admission, and the introduction of a cheap evening season ticket, have been found to meet some of the necessities of the recent Early Closing Movement—as these measures afford one cheap, rational, and instructive mode of aiding to fill up the hours of relaxation from business. A large increase took place in the number issued of these season tickets; and every evening of six weeks, during which the exhibition was open, the galleries were crowded with visitors. There seemed no reason to surmise that the amount of attendance had yet reached its maximum; but, on the contrary, that a much wider sphere of usefulness in this direction remained to be occupied and improved by the Academy. The first impressions in bronze of the president's medal, executed by Mr. B. Wyon, from designs by Mr. Noel Paton, were placed on the table at the meeting at which the report was read.

ARCHÆOLOGICAL PROFESSORSHIP.—The Royal Society of Literature have just established a Professorship of British History on Archæology, and have appointed the Rev. H. Christmas, F.R.S., &c. to the chair.

STRIKE AT BLACKBURN.—From 200 to 300 mechanics, machine joiners, and smiths, are at present out of employment at Blackburn, in consequence of a recent reduction of rates by their employers, although, according to the *Preston Guardian*, the wages now proposed by the masters of Blackburn are several shillings a week higher than the same class of hands receive in Preston, Burnley, Heywood, or Bolton. The moulders, grinders, and glaziers, are now working at the reduced rates. Notwithstanding this subject of difference between the employers and employed, the tone of feeling between them is said to be satisfactory.

THE IRON, COAL, AND COPPER TRADES.—No sooner does the iron trade show an inclination to return to reasonable and moderate demands in regard to prices, than "symptoms of reaction towards a better state of things are already visible." Such symptoms, however, are now as ever accompanied by others partaking of the nature of those smashing failures to which the crises of speculative fevers so inevitably lead. There have already, accordingly, been several extensive failures in different quarters, and our only hope is that the mischief has been confined to those who merit it. Reduction of wages is now the talk; but for reasons already stated, that is a movement which meets with but little of our sympathy at least. Many poor fellows, instead of being benefited by the high prices, have latterly been reduced to half time, on that very account, their stupid masters having injured both their workmen's interests and their own, in their undue efforts to realize impracticable prices. In south Durham, however, the returning glimpse of prosperity has already led to the blowing in of idle furnaces, and actually to the construction of new. Thus it may be that, as heretofore, high prices will only give place to excessive production and glutted markets. The iron trade appears to be constitutionally subject to a perpetual succession of such heats and colds of intermittent fever. Among the lowest prices quoted since quarter-day, have been 8*l*. 10s. for bars in South Staffordshire, and 3*l*. 6s. to 3*l*. 8s. for pigs at Glasgow.——The extraordinary scarcity and rise in the price of coal last winter, in the metropolis and elsewhere, has not been lost upon the railway companies, who have used the utmost exertions to secure an enormous traffic in that useful article; and they still continue to build waggons, and to spare no effort or outlay of capital in order to develope the trade. One consequence is, that while coals sold in London last winter at 42s. to 52s. per ton, they can this winter still be had for less than one-half these prices, and doubtless will continue to be so.——Copper has not sympathised in the fall of iron, and for some time past purchases are said to have been made with more confidence than they were a few months ago.

LIVERPOOL ARCHITECTURAL SOCIETY.—At a meeting of this society held last week, Mr. John Hay in the chair, Mr. Picton read the second part of his "Notes on Architecture in Flanders and Brabant." Commencing where he left off in the first part, at Antwerp, he exhibited to his hearers the most interesting buildings of Antwerp, Brussels, Liége, and Mechlin, or Malines. Mr. Picton concluded his paper by showing the advantage of travelling with some definite object. A brief conversation ensued, which turned chiefly on the proper meaning of the term *renaissance*.

THE ALHAMBRA AT THE CRYSTAL PALACE.—It may be well to mention that the "Hall of the Abencerrages" of the Alhambra Court is now exposed to view. Some of our readers may like to see it before the painting is commenced. As a piece of construction it well deserves study.

INSTITUTION OF MECHANICAL ENGINEERS.—The eighth annual meeting of the members of this institution was held on 24th ult. at Birmingham; the president, Mr. Fairbairn, in the chair. The secretary read the annual report of the council and statement of accounts, which showed a satisfactory and prosperous position of the institution, with considerable increase in number of members and amount of funds. The annual election of council and officers then took place by ballot; Mr. Fairbairn being re-elected president for a second year. A paper was then read by Mr. Robert Morrison, of Newcastle-on-Tyne, on an "Improved Steam-hammer." The next paper read was on a new manufacture of "Compound Metallic Rods and Bars," by Mr. Edward J. Payne, of Birmingham. The next was a description of an "Improved Safety-valve," for steam-engine boilers, by Mr. James Fenton, of Low Moor. The last was a description, by Mr. John Ross, of Birmingham, of an "Improved Tuyere for Smiths' Hearths." A new "Steam-pressure Gauge" was exhibited by Mr. Shanks, of London.

THE ARCHITECTURAL INSTITUTE OF SCOTLAND.—The first meeting of this body, held in Glasgow, this season, took place on Thursday before last, in the hall of the Scottish Exhibition, Bath-street. Mr. C. H. Wilson, of the Government Local School of Art, read a paper on the "Formation of Provincial Museums and Collections of Works of Art." Mr. Wilson's views excited some discussion; after which, the chairman (Mr. Rochead, *vice* the Lord Provost) intimated that, in consequence of the lateness of the hour, he would not bring before them, till next meeting, a communication received from the Greenock Town Council on the subject of the Watt Testimonial. The Greenock Town Council, it appears, have been consulting various associations of architects as to the shape which the proposed testimonial should assume, and had written to the Architectural Institute among others.

ECCLESIOLOGICAL SOCIETY.—A committee meeting was held at Arklow House, on Wednesday, January 17; Mr. Beresford Hope in the chair. The chairman laid before the meeting the correspondence with the promoters of the competition for the proposed cathedral at Lille. A resolution was passed to assure the Lille commission of the sympathy and willing co-operation of the Ecclesiological Society, and to prepare a notice of the conditions of the competition, for insertion in the next number of the *Ecclesiologist*. Mr. Slater met the committee, and exhibited some designs for a cathedral at Adelaide. This was a large cruciform structure, in late Middle-Pointed style, with a lofty central tower and spire. The design was discussed in detail, and the committee agreed that in cases where a part only of a church is to be built, it is ordinarily better to begin with the nave; inasmuch as there is more likelihood of a permanent choir being afterwards substituted for a merely temporary one, than of a nave being built or used when the congregation has once become accustomed to worship in the choir. Mr. Slater was recommended to give more importance to the western façade of his design, and was reminded that a colonial cathedral required accommodation for the meeting of a synod, and for other diocesan purposes. Various designs submitted by other architects were also considered.

A PERIPATETIC MUSEUM. — The Department of Science and Art of the Board of Trade have formed a small museum of ornamental art, which is intended to be sent in succession to the different local schools in connection with that department; in fact, to circulate all over the country, and thus render the London central institution useful in the provinces. The collection is composed of a selection from the objects contained in the museum at Marlborough House.

THE PANAMA RAILWAY.—This road, connecting the Atlantic and Pacific oceans, which has hitherto, strange to say, attracted but little notice in England, is now actually completed, and at this date the trains are probably running through from sea to sea! It extends from Navy Bay, on the Atlantic, to the Bay of Panama, on the Pacific, its entire length being less than 49 miles. Its gauge is 5 feet; its grades easy,—the highest for a short distance near the summit, being 60 feet to the mile on the Pacific, and 53 feet to the mile on the Atlantic slope, the summit being only 250 feet above the level of the sea. Some of the bridges are of iron, and it is intended to replace all the wooden structures with that material. The neutrality of the isthmus it traverses is guaranteed by the Government of the United States, by special treaty with New Granada; and also by Great Britain and the United States, by the Bulwer treaty. It thus becomes the highway of nations. The amount expended on the road to this date is about six millions of dollars (1,200,000*l.*). It is estimated that one million of dollars more will replace the wooden bridges with iron, and finish and fully equip the road for expected increase of traffic, making the entire cost 1,400,000*l.* sterling, or seven millions of dollars. This has been accomplished by the enterprise of our Transatlantic brethren, at an inconsiderable cost in view of its importance, a work which many pronounced an impracticability, and all deemed a hazardous undertaking.

EXPENSE OF THE METROPOLITAN PARKS.—A return recently published shows that the gross total expenditure for keeping up St. James's, the Green, and Hyde parks for the year ending the 31st March, 1854, amounted to 13,711*l.*, Kensington-gardens, to 2,111*l.*; Regent's-park to 6,551*l.*; Victoria-park to 2,042*l.*; and Greenwich-park to 1,110*l.* These sums are exclusive of the rangers' departments. Among the items of expenditure of the three parks first mentioned, may be mentioned 95*l.* for watering; 4,259*l.* for repair of roads, including tools and materials; 54*l.* for food of aquatic birds; 1,192*l.* for lighting; 650*l.* for the supply of water to Serpentine, St. James's-park, &c. There is also a special charge of 876*l.* for draining Rotten-row and footpath on south of enclosure in St. James's-park. The receipts of these parks, arising from grazing rents, subscriptions for keys, and sale of timber, amounted to 549*l.* In Kensington-gardens, among other items, 23*l.* were said to be expended on the water-fowl, and 219*l.* on facing and paving the banks of the Serpentine. The receipts from the gardens were 87*l.* The receipts from Regent, Victoria, and Greenwich parks amounted respectively to 972*l.* 672*l.* and 74*l.*

SOCIETY OF ARTS.—The annual exhibition of inventions of this society is announced to open on the 2nd of April next.

J. J. GRIFFITHS, SCULPTOR.—The *Sussex Express* mentions the untimely death, at the age of twenty-four, of Mr. J. J. Griffiths, a sculptor, in the employment of Mr. Hutchison, patentee of the indurated stone, for whom he had executed the font in Staines Church, and other works.

THE NEW PUBLIC HEALTH BILL.—The Bill introduced to the House of Commons by Sir Benjamin Hall, and read a first time, has been printed. It consists of four parts; the first relating to the General Board and its powers; the second to the application of the Act and the constitution of local authorities, the third to the powers and duties of these authorities; resolving itself, in fact, into a sort of Buildings Act in many essential particulars; and the fourth relates to the repeal of former Acts. If it be proposed to place a town under the protection of the Act, on a requisition signed by not less than ten inhabitants, a public meeting is to be convened, and there must be a clear majority of the meeting, or of the poll of the district, if demanded, before the General Board of Health (which is continued) can send down an inspector to inquire. The power taken by the General Board may be confined by the inhabitants to a particular emergency. Provision is made against the inspectors directly or indirectly becoming contractors for work in any district. Local boards are to appoint their own surveyor; but the General Board must inspect and approve plans before giving their sanction for raising money for any purpose; and they also inspect the works in progress to see that they are effectually carried out. The total amount that may be raised is extended from one year to two years' rateable value of property, as assessed to the poor-rate; repayment distributable over a period of thirty years. Annual reports are to be made by each local board, and presented to each ratepayer, and an annual report to Parliament by the General Board. Corporate authorities, where there are such, are to constitute the local Health Act administrators. Every local Health Board, under the third part of the Bill, will have power to construct reservoirs and divert sewage for sale, &c. besides other powers over new and other sewers and drains, as well as houses to be built as respects conveniences and drainage, which conveniences, &c. must be provided, under certain limits, to the satisfaction of the local board, under a penalty not exceeding 20*l.* and the board to provide such if necessary at the cost of the owner. Factories also come under such powers and regulations. Cellars newly built are not to be let as dwellings and, except with certain observances, not to be so let at all. Plans and particulars as to new houses, or rebuildings, to be submitted to local boards, and their surveyor to inspect the premises as they proceed, the whole to be done consistent with the powers of the Act under a penalty not exceeding 50*l.* for each infringement or offence. Streets to be under control of local boards as to cleaning, levelling, flagging, repairing, &c. There are also powers given to local boards of health as to water supply and lighting. The provisions of the Towns Improvement Clauses Act of 1847 to be incorporated with this Act as regards streets, sewers, houses, smoke prevention, fire-proof construction, supply of fresh air to buildings, &c. Slaughter-houses to be licensed by local health boards, and markets and fairs regulated, recreation or pleasure-grounds provided, &c. The Act will also contain powers to defray expenses by general district rate. We do not observe any special allusion to the metropolis or its districts throughout the Bill.

THEATRE BURNT DOWN.—Our warning, while alluding to the recent theatre burning at Brussels, to look to our own, had scarcely been given, when the Grimsby Theatre Royal, took fire, and was entirely destroyed. The property it appears was insured to the extent of 250*l.* The fire occurred on Monday before last.

WORKHOUSE COMPETITION: KING'S LYNN.—The guardians of the poor, after examination of twenty-six sets of plans for a new workhouse, have selected those bearing the motto of "East Anglia," the production of Messrs. Medland and Maberly, of Gloucester. The guardians, in their "Instructions to Architects," stipulated that designs should not be coloured otherwise than by Indian ink. According to our informant, the estimates given varied from 6,000*l.* to 16,000*l.* The estimate of the selected plans is about half way between the two sums.

WEYMOUTH CEMETERY COMPETITION. — The designs of Mr. William John Pinch, of London, have been selected from many others. The second premium was awarded to Mr. Talbot Bury.

TO PRESERVE WOODWORK OF FARM BUILDINGS. Take two parts gas-tar, one part pitch, one part half caustic lime and half common resin; mix and boil these well together, and put them on the wood quite hot. Apply two or three coats, and when the last coat is still warm, dash on it a quantity of well-washed sharp sand, previously prepared by being surged through a sieve. The surface of the wood will then have a complete stone appearance, and may be very durable. It is necessary that the wood be perfectly dry, and one coat should be well hardened before the next is put on. It is necessary, by the use of lime and long boiling, to get quit of the ammonia of the tar, or it will injure the wood.

ST. MARYLEBONE BANK FOR SAVINGS.—It was shown at the last annual general meeting of this institution, that the sum belonging to the bank in the hands of the Government on the 20th Nov. 1854, was 351,260*l.* 12s. 4d. and in the hands of the treasurer, 2,031*l.* 19s. 6d. making a total of 353,292*l.* 11s. 10d. The balance due to depositors at that date was 352,652*l.* 11s. 5d.

THE ARCHITECTURAL JURY FOR THE PARIS EXHIBITION.—The following are appointed for the examination and admission of works in the architectural section:—Messrs. Caristie, De Caumont, Duban, De Gisors, Hittorff, Labrouste, Lassus, Le Bas, Lefuel, Lenoir, Lenormant, and Violett-Leduc,—all well known and eminent men.

TENDERS

For a new house, or villa, at May-bank, Newcastle-under-Lyme, for Mr. James Edwards. Messrs. Ward and Son, architects. Quantities taken out by the architects:—

Suton and Baker, Newcastle	£2,320 0 0
Wolstanton	2,280 2 7
Reece, Longport	2,183 0 0
Farham, Crewe	2,119 12 0
Watkinson, Burslem	2,112 0 0
Broadgate, Abby Ulton	2,100 0 0
Chapman, Newcastle	1,990 0 0
Bryan, Stoke (accepted)	1,875 0 0

For two chapels and lodge for the Charlton Burial-board. Mr. S. Hewitt, architect:—

S. B. Hocken	£2,230 0 0
Norris	2,148 8 9
Bland	2,040 0 0
Colls and Co.	1,986 0 0
Case	1,967 0 0
Rolfe	1,742 0 0

For building four fourth-rate houses, in Fuller-street, Bethnal-green. Mr. Josiah Houle, architect:—

Fowler	£1,189 0 0
Livermore	1,025 0 0
Ennor	986 0 0
Nash	965 0 0
Murduck	942 18 0
Pope	928 0 0

For Putney Cemetery, chapels, lodge, boundary walls, roads, drainage, and ironwork. Messrs. Barnett and Birch, architects:—

	Estimate without Turret. £. s. d	Inclusive of Turret. £. s. d
George Stredder	3,184 0 0	3,347 6 1½
William Harrison	3,090 0 0	3,286 0 0
Higgs and Cullingford	3,038 0 0	3,237 0 0
Culverhouse and Nicholson	2,960 0 0	3,145 0 0
W. Wreatmore	—	3,115 0 0
William Higgs	2,717 0 0	2,877 0 0
J. D. Cowland	2,703 0 0	2,854 0 0
J. and S. Williams	2,616 0 0	2,762 0 0
Clever and Stagier	2,654 0 0	2,756 0 0
Richard Case	2,607 0 0	2,734 0 0
Alex. Honeyman	2,540 0 0	2,720 0 0
John Ashton	2,440 0 0	2,600 0 0
Adamson and Sons	2,387 0 0	2,562 0 0
A. Campbell	2,289 8 7	2,409 8 7
Wm. & Robert Aviss (accepted)	2,154 0 0	2,314 8 0

TO CORRESPONDENTS.

"D. F."—"W. W."—"M. and M."—"W. A." "N. H."—"Mr. B."—"J E" "R. M. P."—"X" may obtain information at Marlborough House)—"A Pupil" (one volume, such as he suggests, was printed, and will be found at No. 1, York-street, under the title of "Buildings and Monuments, Modern and Mediæval")—"H. S."—"W. F." (we are unable to assist.)—"J. D."—"T. J. P."—"J. M. M'C" "T. G." "W. W." (removal of the parts affected with dry rot, the admittance of air, and the application of a solution of corrosive sublimate have been recommended by us on previous occasions.) "J. B." "R. C. and C." "J. N." "Sir P. A."—"Eccleston-square."—"A. H."—"B. S."—"Australia."—"W. H. B."—"M. L. C."—"J. M."—"C. and W."—"R. W." (There is no building 600 feet in height.)—"J. J. NOTICE TO SUBSCRIBERS.—A title-page in colours for the last volume may be obtained *gratis*, on personal application at the Office, but those who prefer it to that which accompanied the index in the closing number. Covers for the volume may be obtained at the Office, price 3s. 6d. or the publisher will send it for 3s. 6d. The complete volume may be obtained, price 31s.

"*Books and Addresses.*"—We are forced to decline pointing out books or binding addresses.

ADVERTISEMENTS.

ARCHITECTURAL and CIVIL ENGINEERING CLASSES, OPENED for the instruction of Pupils, at one guinea per quarter, which includes drawing materials, instruments, colours, paper, drawing-boards, T squares, &c., and instruction in architectural and civil engineering, drawing and colouring, making finished and working drawings, preparing specifications, taking out quantities, estimating &c. &c. For prospectuses, apply to Messrs. HYDE, SMITH, and LEWIS, Civil Engineers, Architects, Surveyors, &c. 24, Guildford-street, Russell-square.

SWISS DRAWING INSTRUMENTS, of equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr S BARLOW, 5 Thavies-inn, H Dorn (between 1 and 3 p.m.), or to Mr H B. BARLOW, Office for Patents, Dunn-place, Exchange, Manchester.

MATHEMATICAL DRAWING INSTRUMENTS JOHN ARCHBUTT, 239, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. A detailed price-list will be immediately forwarded, free, on application.

THE BUILDER.

TO LITHOGRAPHIC PRINTERS.

WANTED, TWO or THREE first-rate CHALK and COLOUR PRINTERS. Liberal wages and constant employment will be given.—Apply to Messrs. A. and J. MACPHERSON, Lithographers, 12, Royal Exchange, Edinburgh.

WANTED, an experienced FOREMAN, to conduct Terra Cotta Works, in the country.—No one need apply without an unexceptionable character. A liberal salary will be given.—Apply to Mr. PETTS, 99, Halfmoon-street, Piccadilly.

TO MARBLE MASONS.

WANTED, an active FOREMAN, to take the MANAGEMENT of extensive MARBLE WORKS at Carlisle.—Apply to THOS. and JAS. NELSON, Carlisle.

WANTED, a JUNIOR CLERK. Must write a clear hand, understand the routine of an office, and be competent to measure superficial works, and take quantities off plans. Salary for the first year, 80l.—Address, by letter, A. and C. Messrs. Jones and Causton's, No. 47, Eastcheap.

TO PLUMBERS, GLAZIERS, AND PAINTERS.

WANTED, a steady Man, in the above line. Must be a good plumber; one that understands gas fitting and zinc work will be preferred. A constancy may be expected.—By letter prepaid), A. Z Mr. Cooke's, Plumber, Bowlane, City, stating wages, age, and reference.

TO MAIN-LAYERS.

WANTED, a FIRST-RATE HAND in the above branch. Apply, by letter only, to A. B. at Mr. Chadwell's, Bookseller, Peterborough.

TO BOILER MAKERS

WANTED, a few good PLATERS. Liberal wages and permanent employment will be given to good hands.—Apply to MELLISE and HUSSEY, Phœnix Works, Twidale, near Dudley.

TO BOILER-MAKERS' FOREMEN.

WANTED, for a Boiler and Gasholder Works, near Dudley, a FOREMAN, accustomed to marine work, and otherwise thoroughly capable of taking the management of the yard. A liberal salary will be given to a competent man.—Address, stating where last employed, age, &c. to T. P. K. care of Mr Sloper, Bookseller, Holborn-hill, London.

TO GAS AND WATER COMPANIES.

WANTED, an ENGAGEMENT as SUPERINTENDENT or MANAGER by a gentleman, who is thoroughly conversant with the management of gas or water works, is a practical engineer, and has had considerable experience in the construction of both gas and water works. Aged 34. No objection to go abroad.—Address, J. C. J. Water Works' Office, Norwich.

TO ENGINEERS, IRONMONGERS, &c.

WANTED, a SITUATION as SUPERINTENDENT of OUT-DOOR WORKS, or CLERK, by a respectable, industrious man, who has good mechanical abilities; can make drawings, estimates, and plan out works; fit up range and steam apparatus, &c. Address, C. D. Office of "The Builder."

WANTED, by a respectable Young Man a SITUATION as BELLHANGER. Has no objection to take piece-work.—Direct to P. W. Spencer's Library, 97, Cromer-street, Gray's-inn-road.

TO BUILDERS AND DECORATORS.

WANTED, by a Young Man, a RE-ENGAGEMENT as CLERK, who thoroughly understands bookkeeping, estimating, &c.—Address, M. Mr. Dunster's, News Agent, Ebury-street, Pimlico.

TO ARCHITECTS.

WANTED, a SITUATION in an Office in London, or some large provincial town. The advertiser has had considerable practical experience, and is accustomed to the routine of an architect and surveyor's office, including drawing up specifications and taking out quantities. Salary less an object than facilities for improvement. References unexceptionable.—Address, F D W. Huntingdon.

TO BUILDERS AND PLUMBERS.

WANTED, by a Young Man, a Situation as PLUMBER, PAINTER, and GLAZIER. Has been in the business fifteen years.—Address T. T. No. 8, Mary-street, Palace road, Lambeth.

ARTICLED CLERK.—WANTED, by an Architect, an ARTICLED CLERK. A gentleman who had already been in the office of an architect would be taken without premium, and, if somewhat proficient in drawing, a progressive salary given.—Apply to Mr. FOWLER, Architect, 1, Garden-court, Temple.

AN experienced BUILDER'S FOREMAN Shop or General) is open to an ENGAGEMENT as above, or as Clerk of Works.—Address, J. Z. care of Mr. Starsess, 7, Brewer-street, Pimlico.

TO ARCHITECTS AND BUILDERS.

A YOUNG MAN, aged 24, about leaving his present employer, is desirous of an ENGAGEMENT in either of the above offices. He is a good draughtsman, capable of making out detail or highly-finished drawings either in colour or sepia; competent to take out quantities or keep builders' books; thoroughly understands surveying, both by chain and instrument. Good references. Salary, 80l. per annum.—Address, A. B. Chapter Coffee-house, New-street, Covent garden.

A CIVIL ENGINEER and CONTRACTOR, immediately proceeding to India on railway works, requires TWO ASSISTANTS as IMPROVERS. They must have some knowledge of surveying. Manufacturer of Closet Basins and Traps, yellow outsides, with white inside. These are warranted to be the most durable earthenware now manufactured.—A list of shapes and prices sent free, on application. A large stock of Plug Basins of every variety.

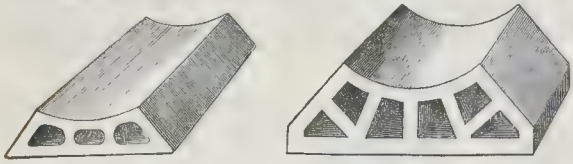
JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN-PIPES (WITH WHOLE OR HALF SOCKETS), WATER-CLOSET PANS, SINK-TRAPS, DOULTON'S INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE PURPOSES.
LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

IMPROVED WATER-CLOSET PANS AND TRAPS, WHITE INSIDE, 5s. 6d. EACH

HALF-SOCKET PIPES
AT USUAL PRICES.



IMPROVED WATER-CLOSET PANS AND TRAPS, WHITE INSIDE, 7s. 6d. EACH

BY THE USE OF WHICH DRAINS MAY BE READILY EXAMINED, AND JUNCTIONS INSERTED, IN THE EVENT OF REQUIRING FURTHER CONNECTIONS.

INVERT BLOCKS of various radii, for Egg-shaped and Circular Sewers, extensively used by the Metropolitan and City Commissioners of Sewers, and are found to be well adapted to the purposes for which they are intended

STRAIGHT TUBES IN TWO FEET LENGTHS

IMPROVED YARD SINK.

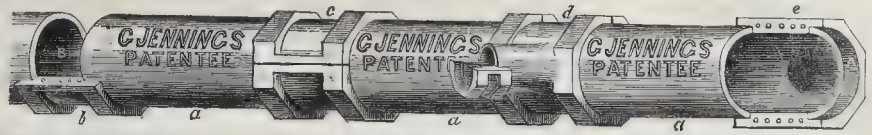
In consequence of so many Closet Pans of an inferior quality having been introduced into the London market, I have thought it desirable to consider the propriety of lowering the Prices of those manufactured by me, not because they bear too much profit, but to supply an article in connection with Stoneware Drain Pipes of a durable character. It is found that Closet Pans not made of Stoneware are not durable, and in the space of a few months the glaze has peeled off the inside, and the Pan becomes rough, and absorbs a portion of what passes through it, thereby rendering it offensive to sight and smell.
WATER-CLOSET PANS and TRAPS of an improved construction, as approved by the Tottenham, Southampton, and other Local Boards of Health, can be had at 5s. 6d. each.
May be had also at Messrs. GLADDING'S Lime Wharves, Regina-road, Westminster-bridge, City-road Wharf, City Basin; Beckhead, Bermondsey; Danvers Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, Kings-road, Camden New Town; J. TURNER, 2 South Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Brydges-street, Covent Garden; and at EDWARD COCKS', 34, Wardour-street, Oxford-street. Drawings and List of Prices will be forwarded free on application.

TO SANITARY COMMISSIONERS, SURVEYORS, ARCHITECTS, BRASSFOUNDERS, PLUMBERS, BUILDERS, ENGINEERS, &c.

61,000 of the Deaths in England during the Year 1854 are referable to the imperfect operation of the sanitary organisation of our towns. *Globe*, 1st February, 1855.

MAYER, BOULTON, AND CO.
CORNWALLIS POTTERY, STAPLETON-ROAD, BRISTOL.

This is the only Manufactory in the Kingdom for the exclusive production of Plug Closet, Sanitary, and Lavatory Basins of all descriptions.



M. B. and Co. having an intimate knowledge of, as well as a practical acquaintance with, this peculiar business, can manufacture cheaper than any other House. They invite especial attention to their

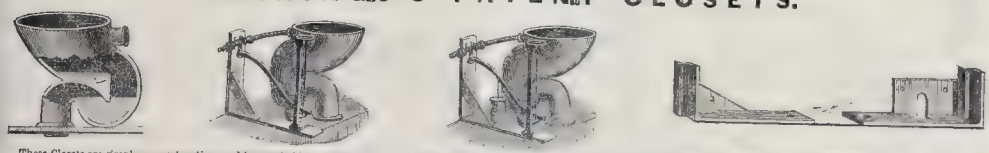
LONDON DEPOT—18 WHARF, CITY-BASIN,
FLINT AND STONE MILLS, FRAMPTON COTTERELL;
AND THE SANITARY POTTERY NAILSEA (Late Couthupes and Co.)

JENNINGS'S PATENT DRAIN-PIPES.



JENNINGS'S IMPROVEMENTS REMOVE ALL OBJECTIONS TO PIPE DRAINAGE. ENGINEERS AND ARCHITECTS specifying these Pipes to be used, will have the GREAT SATISFACTION of knowing that their drainage can at any time BE EXAMINED, OR BRANCH DRAINS INTRODUCED, without in any way disturbing the invert or general drain.

The great favour with which these Pipes have been received is a proof that some alteration in Drain Pipes was needed.

Many PUBLIC AND PRIVATE WORKS are now being drained with these Pipes, among them the COLNEY-HATCH ASYLUM; the NEW PRISON, CHATHAM; MODEL PRISON, PENTONVILLE; the ESTABLISHMENT of MESSRS. BERRENS and BLOOMBERG; the ESTATES of the DUCHY of CORNWALL; the PADDINGTON UNIONS; the CRYSTAL PALACE; the TOWNS of HALSTEAD and CARDIFF &c. &c.

JENNINGS'S PATENT CLOSETS.

These Closets are simple in construction, and imperishable in their material. ANY NUMBER may be supplied from one main pipe, without valves, cranks, or complication.

In their different qualities of ware, they are fit for the mansion or cottage.

References permitted to the following Unions:—STRAND, CAMBERWELL, HOLBORN, ST. SAVIOURS, and ST MARGARET'S and ST. JOHN'S, WESTMINSTER; to GUY'S, ST. THOMAS'S, CITY OF LONDON, ST LUKE'S, and LONDON FEVER HOSPITALS; and to upwards of 100 Villas in the Suburbs of London.

A Book containing Illustrations and Particulars of JENNINGS'S DRAIN-PIPES, WATER-CLOSETS, URINALS, LAVATORIES, SLUICE-VALVES, FIRE-COCKS, GULLY-TRAPS, SHOP-SHUTTER SHOES, &c. &c. can be had free on application, or by post if two postage stamps are inclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.

YORK STONE supplied direct from the Quarries.—NOWELL and ROBSON respectfully invite the attention of Architects, Surveyors, Contractors, Builders, &c., to their excellent STOCK of STONE, combining good colour with durability. Samples may be seen at Keusington Basin and the Great Northern Railway Depôt, King's-cross.—Prices will be sent, and country orders promptly attended to, and delivered at all the Stations on the principal lines of railway, by addressing NOWELL and ROBSON, Quarries, Idle, near Leeds. Purchasers will find the stone of first-rate qualities, and the prices very reasonable.

TO BUILDERS AND OTHERS.

FOR SALE, an excellent Town-made BUILDER'S CART, large size, 6-inch wheels, whole tires, patent arms, and side boards, complete. For particulars, apply to Mr. RATTEE, Cambridge.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

AGRICULTURAL LAND DRAIN-PIPES of all sizes, and in any quantities, may be obtained of L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead traps, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Trap complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Old Fish-street, near St Paul's, London.

SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Upparatus" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the sockets being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank. Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 8, Upper Thames-street.—C. Richardson's, South Wharf, Paddington.—G. Erith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbett's Depôt, Britton-street, Chelsea; and at the Pottery.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c; also, to their Paving, Sinks, &c.; Slabs of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road.

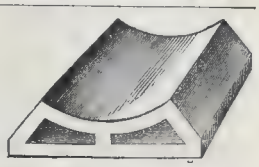
N.B. The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made. January, 1853.

HENRY DOULTON AND CO.

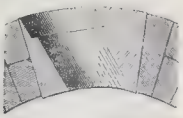
HIGH-STREET, LAMBETH, LONDON.

MANUFACTORIES—HIGH-STREET, LAMBETH; ROWLEY REGIS, STAFFORDSHIRE; AND SMETHWICK, NEAR BIRMINGHAM.

PIPES laid with ordinary care do not need examination. Not ONE in a THOUSAND of all the Pipe-drains laid throughout the Kingdom during the last Six or Seven Years has required to be looked at.

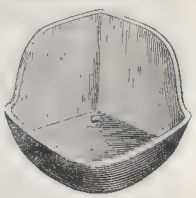


DOULTON'S HALF-SOCKET PIPES may be used with advantage where the Pipes may have to be removed, or in cases where it is necessary to introduce Junctions after the Drain has been completed.



DOULTON'S PATENT INVERT BLOCKS FORM A GLAZED, EVEN, AND IMPERISHABLE SURFACE FOR THE BOTTOMS OF SEWERS.

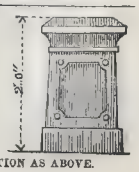
They have been used extensively by the Metropolitan and City Commissioners of Sewers, and for the Main Sewers in many Provincial Towns.



DOULTON'S PATENT JUNCTION BLOCKS, BY WHICH THE CONNECTION BETWEEN PIPE-DRAINS AND SEWERS AND BRICK SEWERS, Is made perfect and secure.

DOULTON'S SINKS AND URINALS

Are manufactured in a NEW KIND OF STONEWARE, of High Glaze and Uniform Colour.



They will withstand the action of the most powerful Acids, and are made very strong to bear rough usage.

DOULTON'S TERRA-COTTA CHIMNEY-TOPS,

Will withstand the action of Frost or Sea Breezes, and are absolutely imperishable.

From 2s. 3d. each.

FULL PARTICULARS, WITH DRAWINGS AND PRICES, MAY BE HAD ON APPLICATION AS ABOVE.

THE BUILDER.

SALES BY AUCTION.

SOUTH SEA HOUSE ESTATE, THREADNEEDLE-STREET.

MESSRS. BEADEL and SONS are favoured with instructions to SUBMIT to PUBLIC COMPETITION on TUESDAY, FEBRUARY 24, at TWELVE, the above valuable PROPERTY, having extensive frontage to Threadneedle-street, and comprising those with old Broad-street, and including a superficial area of nearly three-quarters of an acre, covering a superficial area of nearly three-quarters of an acre. This very eligible property is, with a small exception, freehold, and is all let to tenants. It comprises the present South Sea House, a most substantially erected fabric, three valuable messuages, and also those open areas appertaining to South Sea House, the whole of which will be offered in one lot; also a small building now occupied with the Flower Pot public house, which will be sold separately. The property presents a rare opportunity for the acquisition of a compact freehold estate in the neighbourhood of the Bank of England, and, in its present state, will realize a handsome rental; but if judiciously re-arranged will probably realize an increased income in ground rents, and the materials will find a ready sale to the various lessees.—Particulars, with lithographic plans, can be now ready, and may be had on application to Messrs. Wordsworth, Grantham, and Bunn, Solicitors, at the South Sea House Threadneedle-street; at the Mart; and of Messrs BEADEL and SONS, 25, Gresham-street.

THREADNEEDLE-STREET, immediately contiguous to the Royal Exchange, Lloyd's Royal Exchange-buildings, the Bank of England and the Stock Exchange.

MESSRS. NORTON HOGGART, and TRIST have received instructions from the proprietor, to offer for SALE, at the MART, on FRIDAY, FEBRUARY 16, at TWELVE (unless previously disposed of by private contract), a most substantial FREEHOLD PREMISES, situate at the corner of Three Nun-lane street, immediately opposite the Royal Exchange and Lloyd's, and contiguous to Royal Exchange-buildings, the Bank of England, the Stock-Exchange, and several of the principal insurance offices, a site not to be surpassed, if equalled in value or convenience, in the City of London. The building has been constructed under the superintendence of an eminent architect, and has been finished in the most substantial and perfect manner, having every possible convenience and comfort combined. It consists of seven stories, including the basement, and while it can be allotted to one entire establishment, is so arranged as to be let off in separate compartments, one entire floor on each floor. The entrance is from Threadneedle-street, and that portion next the Royal Exchange-buildings is enclosed by iron railings with a space in front well flagged, and laid upon, thus giving light and air scarcely to be met with in the City of London. It would be most difficult to estimate the annual value of a property of this description, but there can be no question that whether as for one entire establishment, or for separate chambers, its unrivalled position must always command more than ordinary attention, and that it consequently presents an investment of the most important and of a monetary character. May be viewed and particulars had of E. E. Cutler, Esq. Solicitor, 27, Spital-square; of J. Shaw, Esq. Architect, Christ's Hospital; at the Mart; and of Messrs Norton, Hoggart, and Trist, 62, Old Broad street, Royal Exchange

EASTBOURNE, SUSSEX.—Thirty-nine Building Agreements for 99 years, at a moderate annual rental, with the capital and substantial excuses of thirty-nine private residences and shops erected thereon

MESSRS. FAREBROTHER, CLARK, and LYE will SELL, at the ANCHOR HOTEL, Eastbourne, on SATURDAY, FEBRUARY 17, at ONE for TWO o'clock precisely, in thirty-nine lots, by direction of the Right Hon. the Earl of Burlington, THIRTY-NINE BUILDING AGREEMENTS for 99 years, at trifling reserved ground rents, for various plots of land, lately situate on the Grand Parade, Cavendish-road, and Victoria-place, in the most preferable part of that fashionable watering place, Eastbourne on the Sussex coast, with THIRTY-NINE substantial Freehold RESIDENCES erected thereon, of neat Italian style of construction, and upon which advances have and will be made by the vendor. The purchasers will have the advantage of converting their lots into freehold estates in seven years after the completion of the houses, by the redemption of the ground-rents at twenty years' purchase. The property may be viewed, and particulars had, on application to Mr. Berry, Surveyor, Eastbourne; particulars also at the Anchor Hotel; at the Ship, Brighton; Swan, Hastings; Sea House Hotel, Worthing; Ketch Hotel, Lindfield Wells; at Messrs Simmonds, Saville-row, 61, Burlington-street; at Garraway's, and at the Offices of Messrs. Farebrother, Clark, and Lye, Lancaster-place, Strand.

ON WEDNESDAY, the 11th instant, at TWELVE o'clock at noon precisely, in the MAHOGANY SHEDS, Brunswick-road, Poplar Docks, Lot 1:—

224 Logs, Pitch Pine, City St. Domingo Mah. ends.
1,318 Pieces Lemon, Nitre Bitter, and Cork Wood.
Being the cargo, just landed, ex Hilton, from the 6th direct Port of Entry.

Apply to Messrs Imrie and Tomlinson, Merchants.

242 Logs and Ends, City St. Domingo Mahogany
586 Pieces Lignum Vitæ 160 tons, 1 cwt. 3 qrs. 24 lbs.
Being the cargo, just landed, ex James Hunt, from the city direct.

Apply to Messrs Rodgers and Rose, Merchants.

139 Logs and Ends, City St. Domingo Mahogany
5,134 Pieces Lignum Vitæ, 287 tons, 6 cwt. 1 qr. 12 lbs.
Being the cargo, now landing, ex Vienna, from the city direct, on account of the importers.

To which will be added, the usual Assortment of Fancy and Furniture Woods, full particulars of which may be obtained from EDWARD CHALONER, Broker, 6, East Side Queen's Dock, Liverpool.

FARRINGDON-STREET EXTENSION. Building Materials of Twenty Houses

TO ENGINEERS AND SURVEYORS

TOWN SURVEYOR WANTED. — The West Hartlepool Improvement Commissioners are desirous to ENGAGE a qualified person to perform the joint duties of SURVEYOR and INSPECTOR of NUISANCES for the district of West Hartlepool, in the county of Durham. The person appointed will be required to give his entire services. Joint salary for the offices, £90 per annum. Applications, stating age and qualifications, with testimonials to be sent to or delivered at my Office, not later than the 27th FEBRUARY instant, at noon.

By order,
WM. W. BRUNTON, Clerk to the Commissioners.
West Hartlepool, 7th February, 1855.

BURIAL CHAPELS, Lynn, Norfolk.—The Burial Board of St. Margaret, King's Lynn, have issued INSTRUCTIONS and CONDITIONS f r the guidance of Architects desirous to furnish Plans and Drawings for Chapels and other Buildings, to be erected in the proposed New Burial Ground for that parish, which may be had on application to me, by letter pre-paid JOHN JAMES COULTON, Clerk to the Board.
Lynn, February 5, 1855.

COMPETITIONS.

TO ENGINEERS.

THE DRAINAGE COMMITTEE of the Town Council and Police Commissioners of the Burgh of Dunfermline, are desirous to receive OFFERS from qualified Engineers for the PREPARATION of PLANS and SPECIFICATIONS of the SEWERAGE of the TOWN and SUBURBS. Existing plans will be seen, and all other information as to conditions will be obtained, on application to ALEXANDER KILGOUR, Town Clerk, with whom offers must be lodged on or before 1st MARCH next. The Committee do not bind themselves to accept the lowest of the offers, or any of them.
Bridge-street, Dunfermline, 6th February, 1855.

CONTRACTS.

TO MASONS, CARPENTERS, JOINERS, PLUMBERS, GLAZIERS, AND BUILDERS IN GENERAL.

PARTIES desirous of CONTRACTING with the Governors of the United Charities of Nathaniel Waterhouse for the various ARTIFICERS' WORK required in the ERECTION of BLUE-COAT SCHOOLS and ALMSHOUSES in Halifax, may inspect the plans and specification s at my office, on and after MONDAY, the 19th instant. All Tenders to be sealed, and sent free of expense to Mr. CHARLES NORRIS, St. John's-lane, Halifax, on or before TWELVE o'clock on FRIDAY, the 2nd day of MARCH. No allowance will be made for estimates and the Governors do not pledge themselves to accept the lowest or any Tender. CHARLES CHILD, Architect.
King Cross-street, Halifax, Feb. 6th, 1855.

TO BUILDERS AND CONTRACTORS.

PERSONS desirous of TENDERING for the REBUILDING the TOWER, and RESEATING and RESTORING ARKESDEN PARISH CHURCH, near Newport, Essex, may see the plans and specifications at the office of Mr. G. E. PRITCHETT, Architect, Bishops Stortford, and Tracings at the Rector's house, from FEBRUARY 9th to MARCH 3, on which day the Tenders are to be delivered to the Architect. The Committee do not pledge themselves necessarily to accept the lowest Tender.

CONTRACTS.

Naval Engineer Office, Sheerness, Jan. 30, 1855.

CONTRACTS.—Notice is hereby given, that TENDERS will be received at the ORDNANCE OFFICE, PALL MALL, London, on or before TUESDAY, the 20th day of FEBRUARY, 1855, for the performance of the following branches of Artificers' Work for the Ordnance Department in the SHEERNESS DISTRICT, for a period of three years from the 1st APRIL, 1855, determinable at any per d after one year, on either party giving to the other three months' notice in writing, viz.:—

Sheerness, including the Islands of Sheppy and Grain.

Carpenters'	Work.
Bricklayers'	do.
Plasterers'	do.
Slaters'	do.
Masons'	do.
Pain ers'	do.
Plumbers'	do.
Painters', Glaziers', and Paperhangers'	do.
Smiths'	do.

Separate Tenders are to be made for the d ffer nt trades.—Printed Forms and Schedules of Contract may be obtained on application at the Royal Engineer Office at Sheerness, until the 20th day of FEBRUARY next, Sundays excepted, and no Tender can be admitted after the said 20th day of FEBRUARY, 1855. The Board of Ordnance reserve to them s lves the right of rejecting any or all Tenders that may be presented.

ORMSKIRK LOCAL BOARD of HEALTH, WATERWORKS.—To STEAM ENGINE MAKERS, BOILER MAKERS, and OTHERS.—The Local Board hereby give Notice, that they are prepared to receive TENDERS from parties willing to undertake the following Contract:—For the SUPPLY and ERECTION (at Ormskirk) of a NEW STEAM ENGINE, BOILER PUMPS, and other APPARATUS; also, for certain Repairs to existing Machinery and Connections therewith. The Specification may be seen, and forms of Tender may be obtained, together with any further information required, on application at the Office of the Local Board, Ormskirk, or at the Offices of ROBERT RAWLINSON, C.E. 34, Parliament-street Westminster. Sealed Tenders to be delivered at the Office of the Local Board of Health, Ormskirk before SIX o'clock, on TUESDAY, the 20th day of FEBRUARY next, endorsed "Tender for Contract for Engine, Boiler Pumps, &c."

WILLIAM WELSBY, Clerk to the Board.
Ormskirk, January 31, 1855.

TO BUILDERS AND OTHERS.

TENDERS are required for COMPLETING and FINISHING sundry WORKS to FOUR HOUSES, now erected, situate in The Drive, St. German's Park Estate, Forest-hill. The drawings and specifications can be seen on the premises at Forest-hill, between the hours of ELEVEN and FOUR o'clock. The Tenders t be delivered to Mr. WILLIAM PURDIE, Architect, 6, John-street, Adelphi, London, on or before the 26th day of FEBRUARY next. The lowest or any Tender will not necessarily be accepted.

TO CONTRACTORS FOR PUBLIC WORKS.

CARMARTHEN SEWERS.—THE CARMARTHEN LOCAL BOARD of HEALTH are desirous of receiving TENDERS for the CONSTRUCTION of BRICK SEWERS for a portion of the town of Carmarthen, with Junctions, Manholes, &c. Parties desirous of Tendering can inspect the plans and specification at my Office, on and after MONDAY, the 19th of February, at which Tenders must be delivered on MONDAY, the 26th MARCH next, to the Committee, who will meet for that purpose at the Council Chamber, in the Town-hall, at ELEVEN o'clock precisely.—By order of the Board,
GEO. THOMAS, Clerk.
Carmarthen, Feb. 13, 1855.

TO BUILDERS AND CONTRACTORS.

THE WELLS BURIAL BOARD have resolved to ERECT TWO CHAPELS and a PORTER'S LODGE on the Burial Ground.—Plans and specifications are deposited, and may be seen at the Office of Mr. HIPPISLEY, Surveyor, New-street, Wells.—Persons desirous of CONTRACTING for the performance of the Works are requested to send sealed TENDERS, addressed to the Clerk, on or before SATURDAY, the 3rd day of MARCH next, of whom all further particulars may be known.—By order of the Board,
Wells, Feb. 6, 1855. W. J. S. FOSTER, Clerk.

TO BUILDERS, CONTRACTORS, &c.

HULL CORN-EXCHANGE.—The Committee for Building the New Corn-Exchange, at Hull, is ready to receive TENDERS for the EXECUTION of the whole Work, according to the plans and specification, which may be seen at the Office of the Corporation's Surveyor, Town-hall, Hull, between the hours of TEN and FIVE, on any day after the 14th day of FEBRUARY instant, and where parties can have copies of the specification, at 3s. each ; or from Messrs. BELLAMY and HARDY, Architects, Lincoln. Tenders (which must be in the form to be had from the said Surveyor) must be sent, addressed "To the Town Clerk, Town-hall, Hull," and marked outside "Tender for Corn-Exchange," on or before NOON of the 14th day of MARCH next, and must be accompanied by a letter from two responsible persons agreeing to become bound in the sum of £600 for the due performance of the contract, if accepted. The Committee do not bind themselves to take the lowest Tender.

By order, THO THOMPSON, Town Clerk.
Town Hall, Hull, 12th February, 1855.

GLOUCESTER and BERKELEY CANAL NAVIGATION. To CONTRACTORS and BUILDERS. Persons willing to CONTRACT for the EXECUTION of the BRICKWORK, MASONRY, and other Work, required in the erection of a large Pumping Engine at Gloucester, are requested to send in sealed Tenders for this purpose to the Committee of Management, on or before TEN o'clock in the morning of WEDNESDAY, the 28th FEBRUARY instant. Plans and specifications of the work may be seen at this office, on and after MONDAY, the 19th inst By order of the Committee,
W. B. CLEGRAM, Clerk to the Company.
Canal Office, Gloucester, 7th February, 1855.

CONTRACTS.

[For remainder of Contracts see next page.

CONTRACTS.

CONTRACT for FENCING.—The Directors of the Lambeth Improved Freehold Land Society are desirous of having the LONDON RAILWAY FENCING contracted on an estate situate at or near Herne Hill, Lewisham, and specifications may be seen on the premises, or at the Society's Office, 221, High-street, Borough. Tenders may be delivered on or before FOUR o'clock p.m. on TUESDAY, the 28th FEBRUARY, 1854. The Directors do not bind themselves to accept the lowest or any Tender.

WM. BANKS, secretary.

February 14, 1854.

TO BUILDERS.

PARTIES desirous of CONTRACTING for the ERECTION of a new CHURCH, about to be built at Glanrhyd, near Bridgend, South Wales, from the designs of Thomas H. Wyatt, Esq., are informed that the plans, specification, and quantities may be seen on application to Mr. JOHN HUGHES, Angola Arms, Bethesda, on and after MONDAY, the 19th FEBRUARY. The Tenders to be lodged with the Rev. EVAN LEWIS, Glanrhyd, before TWELVE o'clock at noon, on SATURDAY, the 25th of MARCH next, sealed and endorsed, "Tender for Glanrhyd Church." He Committee do not bind themselves to accept the lowest Tender. Further particulars may be obtained by application to THOMAS H. WYATT, Esq., 77, Great Russell-street, London.

WIGAN GENERAL CEMETERY.—To CONTRACTORS.—Proposals will be CONTRACTED with the Burial Board for the Borough of Wigan, for the ERECTION of BOUNDARY WALLS, RAILINGS, and EXCAVATIONS required for above cemetery, now in course of formation, and the necessary Gates and Piers, as per plans and specifications from the 9th to the 25th inst. inclusive, at the Office of Mr. JOHN S. MARSHALL, Solicitor, Wigan, and also at the Office of the Architect, Mr. CHARLES D. BARRY, 47, Bedford-street North, Liverpool, where Books of quantities may be obtained on and after the 9th inst. Persons may send in Tenders for the whole, or a portion only of the works. Parties who Tenders are invited will be required to enter into a bond with two sureties for the proper performance of the work. The Board will not pledge itself to accept the lowest Tender. Tenders must be delivered, sealed, to the undersigned, on or before TWELVE o'clock at noon of MONDAY, the 20th inst.

JOHN S. MARSHALL, Clerk to the Board.

Wigan, Feb. 8th, 1854.

TO BUILDERS.

NEW CHURCH at Isleworth, Middlesex.—Persons desirous of CONTRACTING for the ERECTION of the above CHURCH, may see the plans, specification, and conditions, at the committee room of the National School, Isleworth-square, Isleworth, on and after MONDAY, the 20th of FEBRUARY. The Tenders to be sent in, under before FRIDAY, the 10th of MARCH, to Mr. DEANE, Architect, 24, Keppel-street, Russell-square, London. The Committee do not pledge themselves to accept the lowest or any Tender.

CONTRACTS for the SUPPLY of BUILDING MATERIALS for CONVICT PRISONS.—Persons desirous of TENDERING for the Supply of Timber, Deals, Slates, Lime, Sand, Bricks, Lead, Glass, Wrought and Cast Iron, Ironmongery, Gas and Water Pipes, White Lead, Oils, &c. during Twelve Months, from the 1st of April next to the 31st of March, 1855, for Pentonville, Millbank, Brixton, Portland, Portsmouth, Dartmoor, and Parkhurst Prisons, are requested to forward the same, addressed, "Directors of Convict Prisons, 45, Parliament-street, London," on or before NOON on MONDAY, the 20th of MARCH, 1854. Forms of Tenders may be had on application at the several prisons, or at the Office of the Directors, 45, Parliament-street, London.

45, Parliament-street, 10th of February, 1854.

NOTICE to BUILDERS and OTHERS.—The BURIAL BOARD for the Parish of Trowbridge, in the county of Wilts, intend to enter into a CONTRACT for the ERECTION of TWO MORTUARY CHAPELS, ENTRANCE LODGE, and other BUILDINGS in connection therewith, on their new Burial Ground for the said parish of Trowbridge. Builders desirous of sending in Tenders for the execution of such works, can see the plans and specifications for the same, with the quantities of the several works, at my Office on and after THURSDAY, MARCH 1st. Tenders to be sent in to Mr. ROWLAND ROBWAY, Clerk to the Burial Board, indorsed "Tenders for Buildings, Trowbridge Cemetery," on or before MARCH 13th. The lowest Tender will not necessarily be accepted.

CHARLES E. DAVIS, F.S.A.

Westgate-buildings, Bath, Feb. 14, 1853.

BATTLES BRIDGE, near RAYLEIGH, ESSEX.—Persons willing to CONTRACT for the ERECTION of an IRON BRIDGE, agreeably to plans, working drawings and specifications, which may be inspected and copied at the Office in Clement's-lane, Lombard-street, London, may deliver TENDERS for the same at such Office on or before SATURDAY, the 11th of MARCH next. The contractor will be required to enter into a bond, with a sufficient surety for the due completion of the works under the direction and to the satisfaction of the County Surveyor, at a time to be named in his Tender, and a penalty for each day they shall continue incomplete. The county will not be bound to accept the lowest or any Tender.

GIBSON, Clerk of the Peace.

TO IRONFOUNDERS, BUILDERS &c.

THE Surveyor to the Common Highways of the Parish of St. Leonard, Shoreditch, Middlesex, is prepared to receive TENDERS for the CONSTRUCTION of an URINAL at the top of the Curtain Road. Plan and specification may be seen at the Offices of Mr. KNIGHTLEY, Surveyor, 23, Cannon-street. Tenders to be delivered at Mr. Knightley's Office, on or before THURSDAY, the 22nd instant.—The Surveyor does not bind himself to accept the lowest or any Tender.

CHARLES FYSON, Surveyor.

THE DRAUGHT and DUST EXCLUDER, the cheapest and most efficient preventive for the purpose, being merely glued round the frames in which doors and windows are embedded, so that they press against it. Price from 9s. to 30s. according to size and colour, per gross yard.

Sold at H. HELBRONNER'S, Sole Patentee, 265, Regent-street, London.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.

BARTLETT, manufacturer of Girders, Columns, Railings, Newel and Railing Bars, Panels, Bars Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Diggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE,

Manufacturers of the Iron Railway Bars, Forge and Engine Work, Cast-iron Pipes, and

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Offices, No. 7, Bise-lane, London.

SYLVESTER'S HOT WATER STOVES for Warming Halls, Staircases Galleries, Warehouses, Shops, Hospitals, Offices, &c. require no Flue, create no Dust, and are safe from all risk of Fire.

Any number of these Stoves can be heated from the Boiler in one best, equally well, with steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER is the most powerful safe Furnace and economical Apparatus yet invented for Heating Churches, Chapels, Schools, Public Rooms, &c. &c.

Descriptive Lists and Estimates may be obtained on application to

SYLVESTER and CO. Engineers, and Manufacturers of Heating Apparatus, 96, Great Russell-street, Bloomsbury.

PUBLIC INVITATION.—HEATING by HOT WATER with ONE BOILER JOHN WEEKS and CO. Kings-road, Chelsea, Horticultural Builder and Hot-water Apparatus Manufacturers, most respectfully invite the Nobility, Gentry, Architects, and others, to visit their nursery establishment, where they may see, in full operation, the different modes of heating by hot water, the efficient working of which they guarantee. Also a large assortment of Hot-water Apparatus, Pipes, Stoves, &c. and a number of specimens of wrought-iron tubular boilers, suitable for heating conservatories, forcing-houses, &c. and a variety of other articles, which they have on hand, ready for immediate delivery, at the lowest possible prices. Their Illustrated Catalogue, containing numerous different arrangements for heating by hot water, may be had on application, or will be forwarded to any part of the kingdom on receipt of a stamp. Boilers of every description, to burn coal, coke, or wood, fixed complete with all connections, and delivered to any railway station in London, at the following prices:—

	£	s.	d.
No. 1 Boiler, 2 feet 6 inches long, 1 foot 6 inches wide, 1 foot 6 inches deep	3	10	0
No. 2 Boiler, 3 feet long, 2 feet wide, 2 feet deep	5	5	0
No. 3 Boiler, 4 feet long, 2 feet wide, 2 feet deep	7	7	0
No. 4 Boiler, 5 feet long, 2 feet wide, 2 feet deep	9	9	0
No. 5 Boiler, 6 feet long, 2 feet wide, 2 feet deep	12	12	0

Also a splendid collection of Horticultural Establishment, to be seen at Chelsea.

RANGES.—The Cheapest House in London for RANGES is at MEEK'S CHEAP IRONMONGERY WAREHOUSE, 3, Cambridge-place, Hackney-road. A 3 feet Set (Cutting) and Boiler Cottage Range for 1l. 12s. net cash on delivery; all others equally low.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, public buildings, &c. Smoke flues, ash-pits, and ugly grates are entirely dispensed with, and a fire is seen daily in full operation heating the large meeting room, 130 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion, economy of fuel, and a more healthful atmosphere than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 272, Holborn.

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for—the prize of public approbation,—has long been obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, which consistently the best, most perfect, economical, and complete apparatus for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, H. W. RICHARD and CO. 67, Upper Thames-street, London. Manufactory, Luton, Beds.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4 000 buildings, consisting of churches, prisons, lunatic asylums, halls, and chapels, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application. COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley street, Oxford street.

MAGNUS'S PATENT ENAMELLED SLATE CABINET-FORMED FIRE-PLACE.—This is decidedly the most novel, elegant, and comfortable fireplace that has ever been introduced to the public. It moves on castors, and stands B FORE the opening of the chimney, projecting into the room as a regular cabinet. It is composed of fire-stone and slate and has inner chambers. It may also be fitted up for gas instead of coal. By the economical, who dislike to see half the heat from a coal wasted in the chimney, and by persons of taste, who object to the stiff unmeaning chimney-piece in ordinary use, the CABIN T FORMED FIRE-PLACE has only to be seen to receive its approbation. Prices from ten guineas upwards. Pimlico Slate Works, 48 and 40, Upper Belgrave-place, Pimlico.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Cameral and Hot House Boilers, either in wood or iron, respectfully call the attention of the nobility, gentry, and purveyors to the simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and Co. 42, Ludgate-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK, also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, three-way stop-cocks, flange nuts, elbow cheeks, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark iron bridge.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the whole are passed a long way into the walls, and form of a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as being the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further particulars, and a guarantee of the Proprietor of the patent, Mr. BARRETT, 12, York buildings, Adelphi.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Ryland and Sons' Books, Papers, and Bank notes preserved in one of CHUBB'S SAFES, after four out hours exposure to intense heat.

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"21 High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"GENTLEMEN,—We have great pleasure in communicating to you, that the large Fire-proof Safe that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes &c., enclosed therein, from destruction by fire, on the 30th ult., when our entire premises were burnt to the ground, after which event, fourteen days elapsed before we could obtain the door open, and the contents of the Safe were perfectly uninjured on the 14th of March; the locks all answered to their respective keys, and all the papers therein were found in a perfect state; it was that only some of the books were slightly singed at the edges.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Patent Locks. Complete Illustrated Lists, with prices and sizes, will be sent on application to

14, Stanhope street, Clare-market, London.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS—Messrs. HOBBS, ASHLEY, and CO. are now Manufacturing their celebrated AMERICAN and ENGLISH PATENT LOCKS by their Patent Steam Machinery on the Premises, 97, CHEAPSIDE, and 33, LAWRENCE-LANE.
Messrs. H. and Co. by the introduction of their Steam Machinery, are enabled to guarantee GREATER SECURITY, and SUPERIOR WORKMANSHIP, at prices more moderate than any Locks produced, either in Town or Country; in addition to which, they are applicable to all purposes for which Locks are used.
Every Lock being made and finished at the Manufactory bears their own stamp, and is warranted, without which none are genuine. These Locks can be procured by order through any respectable Ironmonger in the United Kingdom.
WHOLESALE and RETAIL WAREHOUSE, 97, CHEAPSIDE. Manufactory, 33, Lawrence-lane, London.
P.S. Depôt for Miner's Patent FIRE and BURGLAR PROOF SAFES fitted with Hobbs's Patent Locks.

TUCKER and REEVE'S LOCKS afford absolute security at a moderate price.
"The novel and evidently effective principle of security on which these locks are constructed, places them at once in the foremost rank of such inventions; in the present state of the art, picking them would seem to be impracticable." *Standard.*
Depôt: 181, FLEET-STREET, where also may be had PRICE'S FIREPROOF SAFES, &c.
COPYING PRESSES, CASH AND DEED BOXES.
